1. DB Project, Derby subproject, Derby Codebase IP Clearance Status

This page tracks the project status, incubator-wise.

This is just a status page!

2. The real action is at

<http://incubator.apache.org/derby/>

3. Description

"Derby" is a snapshot of the IBM's Cloudscape Java relational database. IBM is opening the code by contributing it to The Apache Software Foundation and basin future versions of IBM Cloudscape on the Apache-managed code.

To participate in the Derby podling, you should join the mailing list. Just send an empty message to derby-dev-subscribe@db.apache.org.

The initial goal of the project while in incubation is to build a viable developer community around the codebase.

The second goal of Derby-in-incubation is to successfully produce a release. Since Derby is in incubation, such a release would not have formal standing; it will serve as a proof-of-concept to demonstrate to the developers' and incubator's satisfaction that this aspect of the project is health and understood.

4. Project info

- The Apache DB project will own the Derby subproject, and the subproject will follow the Apache DB PMC's direction. Significant contributors to this sub-project (for example, after a significant interval of sustained contribution) will be proposed for commit access to the codebase.
- The Derby sub-project's modules will be available as distinct and discrete downloads.

5. Incubation status reports

- none yet

6. Incubation work items

6.1. Project Setup

6.1.1. Identify the codebase

date	item
....-...-	If applicable, make sure that any associated name does not already exist and check www.nameprotect.com to be sure that the name is not already trademarked for an existing software product.

6.1.2. Copyright

date	item
2004-08-26	Check and make sure that the papers that transfer rights to the ASF been received. It is only necessary to transfer rights for the package, the core code, and any new code produced by the project.
....-..-..	Check and make sure that the files that have been donated have been updated to reflect the new ASF copyright.

6.1.3. Verify distribution rights

date	item
2004-10-12	Check that all active committers have a signed CLA on record.
2004-10-12	Remind active committers that they are responsible for ensuring that a Corporate CLA is recorded if such is required to authorize their contributions under their individual CLA.
2004-10-12	Check and make sure that for all items included with the distribution that is not under the Apache license, we have the right to combine with Apache-licensed code and redistribute.
2004-10-12	Check and make sure that all items depended upon by the project is covered by one or more of the following approved licenses: Apache, BSD, Artistic, MIT/X, MIT/W3C, MPL 1.1, or something with essentially the same terms.

Generally, the result of checking off these items will be a Software Grant, CLA, and Corporate CLA for ASF licensed code, which must have no dependencies upon items whose licenses that are incompatible with the Apache License.

6.1.4. Organizational acceptance of responsibility for the project

- Has the receiving PMC voted to accept it? ****YES****
