Online Software Evaluation Report

TITLE : *CanCore*: in Canada and around the world
REPORT # : R46/0412
AUTHOR(S) : Norm Friesen
DATE : December 2004

Abstract

The current report provides an update on Reports #11 and #40 in this series, describing the increasing range of international uses of the CanCore metadata for the indexing of learning objects.

Introduction

CanCore (<http://www.cancore.ca>) is a learning resource metadata initiative, funded by Industry Canada and supported by Athabasca University, Alberta, and T  l  Universit   du Qu  bec. *CanCore* is designed to facilitate the indexing of online educational resources or Learning Objects (LO), by assisting project implementers and catalogers in the development of high-quality systems and indexing based on the IEEE Learning Object Metadata (LOM) standard. This standard specifies the ways in which descriptive data (metadata) about these educational resources can be formulated to simplify searching and information interchange between systems. The LOM standard is both complex and general in nature, however. It contains a broad range of elements, and leaves open many possibilities for interpretation. *CanCore* provides guidance on interpretation and implementation of the LOM at a level of detail much greater than the standard itself. In the words of one private sector implementer, "*CanCore* has supplied some of the best guides and best practices on how to apply learning object meta-data in the real world" (Recombo, 2004). As a result, the *CanCore* guidelines have been used in public and private-sector projects in many Canadian jurisdictions and provinces, in pan-Canadian initiatives, and in projects in the USA, France, the UK, and elsewhere. As a result of this work, *CanCore* and Canada generally have been widely recognized as providing leadership in e-learning metadata implementation. This article describes the range and character of *CanCore* implementations, illustrating the way *CanCore* is utilized, by focusing specifically on a number of developments currently underway in Ontario.

CanCore has been working with an expanding community of implementers since November 2000. Its beginnings were in the context of collaborative initiatives involving several Canadian provinces: the LearnAlberta portal (<http://learnalberta.ca/>), the Campus Alberta Repository of Educational Objects (<http://www.careo.org/>), and the Telecampus repository of online courses developed at the University of New Brunswick. *CanCore* has subsequently been active in the pan-Canadian *eduSource* project sponsored by the Canadian Network for the Advancement of Research in Industry and Education (CANARIE: <http://www.canarie.ca/>). Most recently, *CanCore*'s focus has returned to a number of localized private and provincial government implementations, with financial support by the Multimedia Learning Group of Industry Canada.

Among the provincial projects currently implementing *CanCore* are the BCcampus Learning Resources Centre, the LearnAlberta portal, the Centre for Distance Learning and Innovation (CDLI) Portal of Newfoundland and Labrador, and the Normetic metadata profile work in Quebec (*see next section*). eduOntario is a further provincial project for which *CanCore* has been selected "as the key cataloging model" (Hannaford & Sutherland, 2004). This particular project, funded by the Ontario Knowledge

Network for Learning (OKNL) and based at Ontario Institute for Studies in Education (OISE), is developing "a general-purpose repository prototype" to serve the needs of K-12 and other learners in Canada's most populous province (St. John *et al.*, 2004). The project leaders are Avi Hyman (OISE) and Baiba St. John (OKNL); and project managers are Brian Sutherland and Julie Hannaford (OISE). As a part of this and other work, this initiative has also developed OnCore, a version of *CanCore* designed to meet the educational needs of Ontario. The adaptation of *CanCore*'s classification elements allows each resource catalogued in OnCore to be indexed in relation to Ontario-specific educational outcomes and expectations. OnCore has also been used by Ontario's Bibliocentre to catalogue a number of TVOntario video resources. (TVO is a provincially-funded educational television network that reaches approximately 12 million Ontarians, and cable and satellite TV subscribers across Canada.)

The OnCore group has also been exploring the possibility of further adapting *CanCore* to work alongside another successful metadata solution for online resources: RSS (Rich Site Summary, or Real Simple Syndication). RSS is used as a way of syndicating or distributing news stories, annotated links and other timely information from one location to many other locations quickly and easily. Combined with *CanCore*, RSS could be used as a way of alerting users and repositories to the availability of new and relevant learning objects and metadata records, thus increasing levels of resource sharing and reuse. As the OnCore group explains, "the goal is to piggyback LOM (*CanCore*) Learning Object metadata on RSS to energize the many Learning Object Repositories which are creating resources but not facilitating resource discovery" beyond their own collections (Sutherland, 2004; Hannaford & Sutherland, 2004). A number of other *CanCore* and RSS implementers, as well as the *CanCore* initiative itself, are currently working together to find ways to accomplish this "piggybacking" or adaptation.

***CanCore* implementations**

Other implementations of *CanCore* have been undertaken in a wide range of projects and educational contexts. A listing of some of these projects, products and organizations, and their respective web sites, is provided below. In each case, a brief indication is provided of how the initiative has used *CanCore*.

- 1) *AD LIB Project* (<http://adlib.athabasca.ca/adlib/>). *CanCore* has been used as a basis for defining the metadata creation interface for this project; *CanCore* documentation is used for help screens. Free registration is required to view the metadata interface.
- 2) *BC Campus* (<http://www.bccampus.ca>). *CanCore* is being referenced and adapted in the Learning Object Repository Project of BC Campus: "The goal of this project is to build the foundation for a comprehensive BC learning objects repository (LOR) for British Columbia K-12 and postsecondary education. It is the first phase of a larger goal of BCcampus, which is to provide a LOR model for the BC educational system across all disciplines" (<http://www.bccampus.ca/Page95.aspx>).
- 3) *BC Open School*. BC Open University (<http://careo.prn.bc.ca/cgi-bin/WebObjects/CAREO.woa>). *CanCore*'s guidelines have been used to develop metadata records.
- 4) *Canadian Heritage* (<http://www.pch.gc.ca/>). *CanCore*'s metadata approach is plays a central role in this overall metadata strategy recommended for Canadian Culture Online Policy (http://mdlet.jtc1sc36.org/doc/SC36_WG4_N0075.pdf).
- 5) *CDLI Portal* (<http://www.cdli.ca/>). The Centre for Distance Learning and Innovation of the Department of Education in Newfoundland and Labrador is adhering to *CanCore*'s guidelines in making learning objects available through its portal.

- 6) *CELTS (China)*. *CanCore* metadata element subset is referenced in defining CELTS subset, "the core set of CELTS-3.1 is a subset of *CanCore*, which in turn is a subset of LOM."
(http://mdlet.jtc1sc36.org/doc/SC36_WG4_N0059.pdf)
- 7) *CMEC Portal*. As is explained in CMEC documentation: "proponents will be expected to meta-tag each multimedia learning object using the standard descriptors developed for use in the CMEC portal. These descriptors follow the *CanCore* standard
(<http://dev.cdli.ca/developer/meta-tagging.htm>).
- 8) *Desire2Learn* (<http://www.desire2learn.com>). *Desire2Learn* is a full-featured learning management system which includes a learning object repository. "The D2L Learning Object Repository technology incorporates industry standards, such as SCORM, *CanCore*, IMS, and others..."
- 9) *EduSplash* and *Lionshare* (<http://www.edusplash.net>). The *eduSplash* peer-to-peer metadata and object sharing software advertises itself as "powered by *CanCore*." This interface and tool are being incorporated in the international *Lionshare* project.
- 10) *Eisenhower National Clearinghouse* (<http://www.enc.org/>). *CanCore*'s guidelines documents and discussions have been used extensively in the development of metadata for this American project (<http://www.dlib.org/dlib/september03/lightle/09lightle.html>).
- 11) *Etraffic Solutions Inc.* (<http://www.etrafficsolutions.com>). This is an international online learning content and applications developer that uses *CanCore* in creating and tagging its learning objects (<http://www.etrafficsolutions.com/about/news/newsletters/apr2003.html>).
- 12) *Government of Canada Metadata Framework* (Canadian Treasury Board). "Within the GoC, *CanCore* is the preferred interpretation of the IEEE LOM"
(http://www.cio-dpi.gc.ca/im-gi/mwg-gtm/ems-sml/docs/2004/meta-profil/meta-profil04_e.asp).
- 13) *LearnAlberta.ca* (<http://www.learnalberta.ca>). "The metadata records used to locate and describe resources available at this portal have been developed using the *CanCore* guidelines as a central input."
- 14) *LLearn* (<http://www.llearn.net/project.php>). "The LLEARN project is a private-public partnership...designed to bring together best practices in second language teaching/learning and the capacity of broadband technology...LLEARN will be SCORM and *CanCore* compliant"
(www.llearn.net/_pdf/documents_papers_3pager.pdf).
- 15) *Magic Lantern* (<http://www.magiclantern.ca/index.asp>). As a major supplier of video learning objects to Alberta Learning, *Magic Lantern* has created metadata records for a large number of its resources, using *CanCore* as a guide.
- 16) *ManUeL Metadata Application Profile and Metalab tool*. *CanCore* is acknowledged as being the basis for this French application profile. (Documentation is under development).
(http://minotaure.ulyse.u-bordeaux.fr/area21/resource_manager_1.7/).
- 17) *National Science Digital Library* (<http://www.nsdlib.org/>). In developing and refining its Dublin Core-based metadata scheme, the NSDL has consulted with *CanCore* staff and utilized *CanCore*'s guidelines.
- 18) *Normetic Quebec* (<http://www.profetic.org:16080/normetic/>). The *CanCore* element subset and guidelines has been used as central inputs in the development of the Normetic element subset (http://www.profetic.org:16080/normetic/article.php?id_article=53).

- 19) *Recombo* (<http://www.recombo.com/>) has utilized *CanCore* in a number of its metadata tools.
- 20) *Peace River North School District's Resource Scrapbook* (<http://scrapbook.prn.bc.ca/>). *CanCore* Guidelines has been used in updating this collection's metadata.
- 21) *TeleCampus* is a listing of 50,000 courses and course components used by *CanCore* to update its metadata. A version of this repository will be housed at Athabasca University.
- 22) *The Inclusive Learning Exchange (TILE) Project* (<http://barrierfree.ca/tile/project/>). "*CanCore* Metadata (with extensions)" has been used to mark up the content in this collection.
- 23) *TVOntario* (<http://www.tvo.org>). "TVOntario recently adopted a version of *CanCore* to catalogue its video resources in relation to the Ontario Curriculum" (<http://www.eduontario.ca/research/oncore/>).
- 24) *UK LOM Core* (<http://www.cetis.ac.uk/profiles/uklomcore/>). "Lorna Campbell, one of the UK LOM Core's initiators, felt that the depth of gratitude owed to the *CanCore* makers was well worth a name check, and also neatly indicated the similarity between the two adaptations" (<http://www.cetis.ac.uk/content/20030731165743/>).
