

im+m e-Library - by Jim Farmer and Jon Allen. Worth subscribing to its RSS feed.

instructional media + magic, inc. a.k.a. im+m is *"develops standards-based multimedia courseware for colleges and universities, and the supporting information technology infrastructure. Based on research from early initiatives, im+m developed multimedia-rich classroom presentations and on-line courses leading to the improvement of student retention and performance"*.

im+m hosts a rapidly expanding, regularly updated, and authoritative e-library, complete with RSS feed. im+m describes the e-library as being:

"From the Avalanche of Information regarding Higher Education. Source documents referenced in recent blogs and email and discovered during our own research."

Currently, the e-library is particularly strong on North American material relating to the patenting of educational software. What is especially useful about it is its inclusion of blog posts, material from state agency web sites etc, all rendered as PDF files and stored by im+m, irrespective of their source. So this is a proper library, rather than just a library of potentially volatile hyperlinks.
