2.0 Introduction to the Database Design and Data Element Dictionary

2.1 Overview

The California Partnership for Achieving Student Success (*Cal-PASS*) is an initiative that collects, analyzes and shares student data in order to track performance and provide data for informed decision making for the improvement of curriculum alignment and the resulting student success from elementary school through university. Cal-PASS represents a new approach to improving education. The program began in the San Diego/ Imperial county area and has expanded with the development of multiple consortia throughout the state. Cal-PASS consortia members are from the K-12 system, community colleges and universities.

The Cal-PASS data system consists of a number of tables designed to collect and organize information on students, their enrollments, assessments and their achievement. This information is used to give faculty and others specifics on how well prepared their students are for the next level of instruction, to better align inter-segmental curriculum, to increase the communication between and among segments, to give a clearer picture of transfer students and more.

This is a companion document to the *Cal-PASS Community College User Guide*. Both documents are intended to be used together while using and researching data with Cal-PASS. The Data Element Dictionary details each data file that makes up the core submission:

- Student Data
- Course Enrollment Data
- Award Data

The User Guide provides the technical process used to validate, submit, and download these data files. To request a copy of the User Guide, please contact help@calpass.org.

2.2 Database Design

The database design consists of a set of related tables/files (student file, course enrollment file, award file, assessment file). A separate set of tables exists for each segment (K12, Community College and University) in the Cal-PASS database and each table contains clearly defined data elements and formats for each element. These tables contain the “core” Cal-PASS dataset. Additional elements may be collected and are titled “Custom files”. The definition of the file layout for these optional files is determined by the individual member district.

2.3 Performing the records match

There are several fields included in the Cal-PASS dataset that may be used for matching.

Social Security Number: This is the first and most reliable match.

Derived key 1: If the SSN is not available, the derived key 1 is used. This key is created using an algorithmic formula during validation. This key is most reliable within regions. Use of this key with extremely large datasets may result in false matches.

Derived key 2: The derived key 2 uses the same algorithm as the derived key 1 with the addition of the school of origin.

Statewide Student Identifier: By Spring 2006, all K-12 students in California were required to have a unique CSIS Number. This field should be used for matching students within the K-12 segment (middle school students in one district to high school in another district, for example).

Note: The core table for all segments is the student table and it carries the fields above. The other tables (course, award) link to the student table via the school ID, academic year or term ID and the Student ID.

2.4 Data Submission

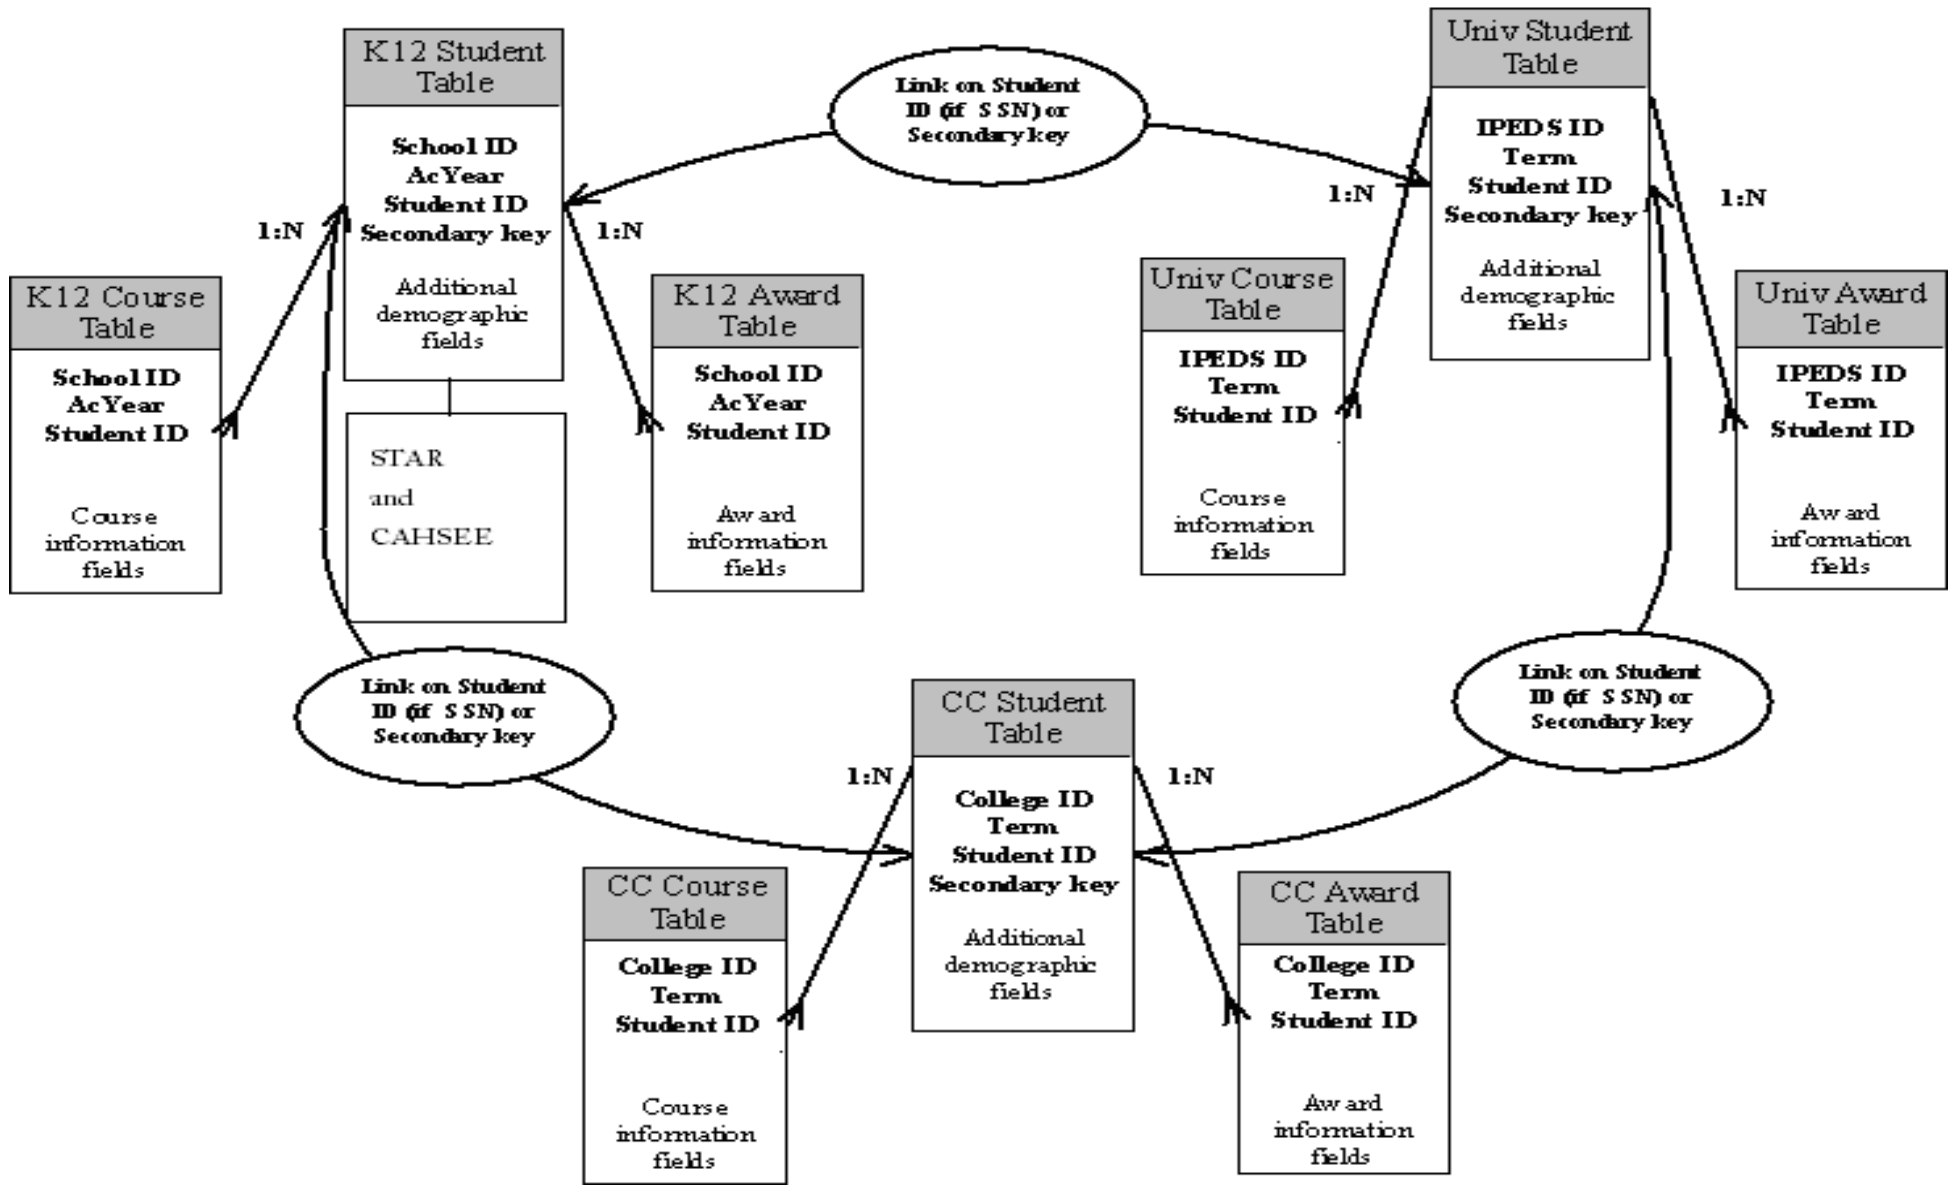

All community college data for participating districts is submitted annually by the Management Information Systems (MIS) Department of the California Community College Chancellor's Office.

2.5 Cal-PASS Entity Relationships

On the next page, you can see a flowchart, illustrating how the data submissions are connected for inter-segmental analysis.
