Gradintel are a trusted provider
of software solutions within the Higher Education sector

We work with universities to deliver market leading Higher Education Achievement Report (HEAR) services and support improved graduate employability.

The Higher Education Achievement Report

Access your official HEAR report with Gradintel

At the heart of Gradintel is the new Higher Education Achievement Report - the HEAR. We believe the HEAR is an important development for the UK HE sector which over time will deliver significant employability benefits. The HEAR has the potential to transform the journey from higher education to work and support improved university-business relationships.

The HEAR talent pool is also a valuable resource to support more efficient postgraduate recruitment marketing and admissions.

We are committed to the success of the HEAR and have been enthusiastic and active supporters throughout its development:
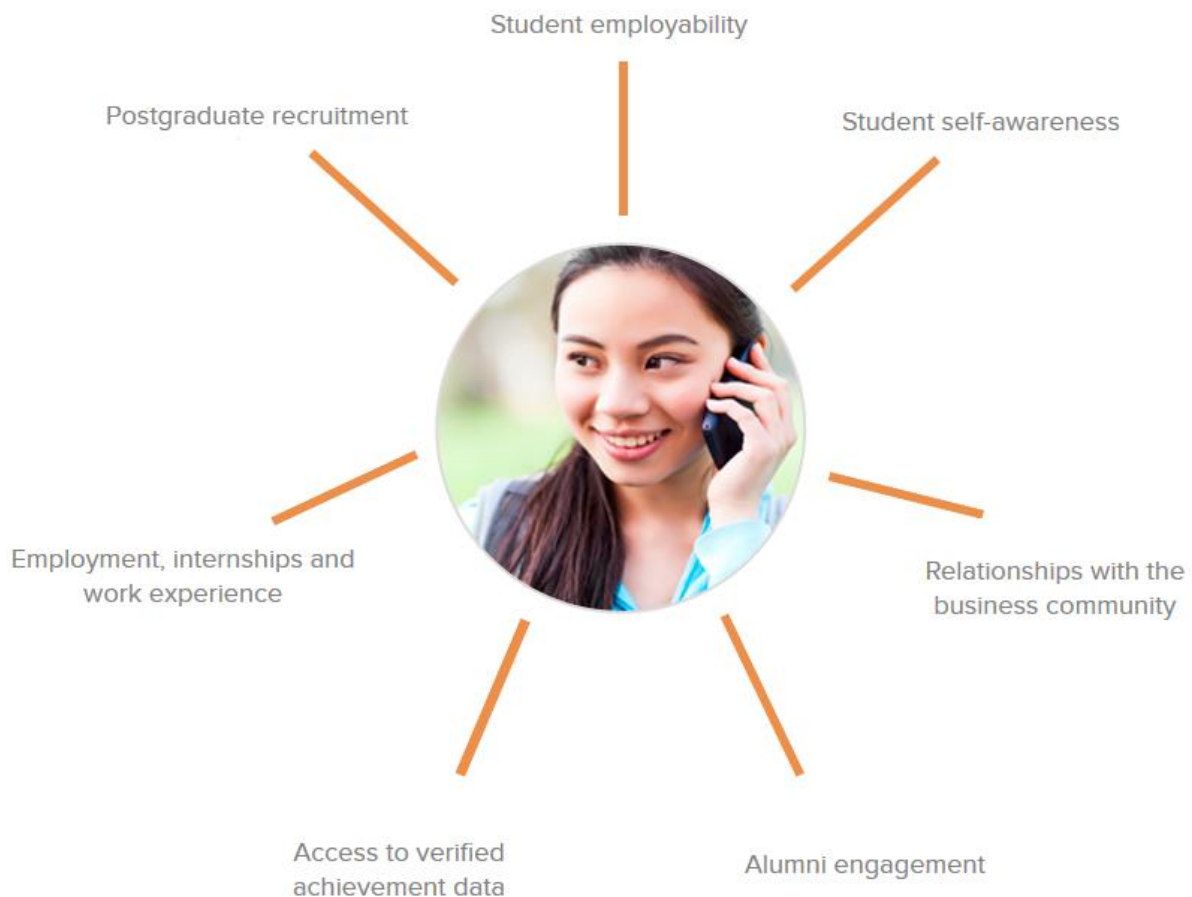

- Supporting the development of the HEAR technical specification and guidance
- Delivering JISC pathfinder projects to evidence the value of the HEAR to the sector
- Delivering seminars and workshops for the HEA and the CRA
- Promoting HEAR awareness with employers, employer membership organisations, the NCUB and the AGR
- Supporting the HEAR recognition within the European Commission
- Alumni engagement
- Assisting early adopter/HEAR pilot institutions with their HEAR projects

Gradintel is proud to be the UK's largest supplier of HEAR hosting and management services. We implement and support our HE solutions through a strategic partnership with Tribal Education. We also have a cooperation agreement with the Higher Education Academy in support of the HEAR and its deployment across all UK HE institutions.

Our significant experience in the HE sector allows us to meet the needs of multiple stakeholders within an ever-changing landscape.

For more information on the HEAR, please visit the official website, operated by the Higher Education Academy [www.hear.ac.uk/].

Designed to enhance the recording of student achievement, the HEAR will bring clarity and detail to an employer's selection process. It will better equip students to show employers everything that they did at university, allowing them to demonstrate the full breadth of their capabilities.

Matching students and recent graduates with opportunities

As the market leaders in our field, we currently support 33 UK universities to deliver pioneering HEAR services and boost employment opportunities for their students and graduates. Over 500,000 HEARs have been published by our education partners via Gradintel.com.

We use this wealth of verified data to connect students and recent graduates with employment and further study opportunities. Our service helps universities to market their talent pool more effectively and provides recruiters with a simple and efficient way to identify and engage with high potential students and graduates.

We help universities to develop innovative employability services and integrate established services to improve the student experience.

For the first time postgraduate recruiters can use verified academic achievement data to focus their recruitment marketing campaigns.

Employers are given access to a powerful matching engine allowing them to create highly specific candidate profiles. This benefits both employers and graduates as only the most suitable candidates are invited to apply for roles.

Students and recent graduates are our largest user community with over 250,000 registrations to date. If you are interested in a summary of what Gradintel offers to this community please take a look at our student pages.
