You may use the comments in any way you wish.

The observation about management essentially says: "Because of the JISC Conferences, the CETIS SIGs, and the collaborative projects encouraged by JISC, university IT managers became aware of the practices and developments of others, had the opportunity to learn of perspectives beyond their own university, and developed confidence and trust in the work of others. This has led to sharing that otherwise may not have occurred, and thus made their own work much more effective."
