
Kuali Student

Kuali Student allows institutions to manage the complete lifecycle of courses and programs with simple, yet powerful and flexible workflow, rules, and forms.

Kuali Student will be a complete, modern student system that will include Admissions, Financial Aid, Student Accounts, Enrollment, Curriculum Management, Academic Planning, and Degree Audit. It's a beautifully designed user experience in a cloud-native application, and it will be released under an open source license. We're developing the system with product design partners including University of Toronto, University of Maryland, University of Hawaii, North-West and Stellenbosch Universities in South Africa, and Coventry University in the UK.

The first module, Curriculum Management, works with your current student system and will be generally available late Summer 2015.

For more information about Kuali Student, visit www.kuali.co/student.
