

Oracle's OTN TechCasts

Tune into "fireside chats" with technical experts about the latest technology headlines from Oracle.

Oracle's OTN TechCasts are online audio interviews with Oracle technology experts, delivered via podcasting, about the latest products and technologies for developers and DBAs. Think of them as an audio magazine or portable on-demand radio show you can listen at your leisure.

- **Understanding Oracle Fusion Architecture and Fusion Middleware**

September 20, 2005

Podcasting from Oracle OpenWorld 'Applications Day,' SVP Applications Strategy Jesper Andersen and SVP Applications Technology Cliff Godwin jointly explain the components-based nature of Fusion Architecture, its Fusion Middleware underpinnings, and why Oracle customers (and non-customers) should care.

- **Open Source and the Changing Developer Tools Market**

August 8, 2005

Roel Stalman, senior director product management for developer tools, provides details about Oracle's activities in the open source development community, the reasons for Oracle's strong support for the JavaServer Faces and EJB3 specs, and the role of the 'rich internet client' in SOA.

- **BPEL: What It Is, What It Isn't**

June 24, 2005

Dave Shaffer explains the fundamental concepts behind Business Process Execution Language(BPEL), why it's an improvement over EAI approaches, and its role in SOA--and why J2EE developers should care.

- **Understanding Oracle's New Eclipse EJB 3.0 Tools**

May 17, 2005

Shaun Smith explains how Oracle will lead this new Eclipse project, what it means for JDeveloper and Eclipse users, and how EJB 3.0 simplifies object-relational mapping.
