

Sakai

Publisher's Note: In a January 8, 2007 email Sakai Board Member Clay Fenlason commented: "Also note that the Sakai analysis only goes back as far as the svn reorganization last April, and it's only for the modules that are included in the release."

Sakai is an online Collaboration and Learning Environment. Many users of Sakai deploy it to support teaching and learning, ad hoc group collaboration, support for portfolios and research collaboration.

Sakai is a free and open source product that is built and maintained by the Sakai community. Sakai's development model is called "Community Source" because many of the developers creating Sakai are drawn from the "community" of organizations that have adopted and are using Sakai.

Contributors

Over the history of the project, 43 developers have contributed code. However, only 42 have done so in the last year.

Sakai

Publisher's Note: In a January 8, 2007 email Sakai Board Member Clay Fenlason commented: "Also note that the Sakai analysis only goes back as far as the svn reorganization last April, and it's only for the modules that are included in the release."

Sakai is an online Collaboration and Learning Environment. Many users of Sakai deploy it to support teaching and learning, ad hoc group collaboration, support for portfolios and research collaboration.

Sakai is a free and open source product that is built and maintained by the Sakai community. Sakai's development model is called "Community Source" because many of the developers creating Sakai are drawn from the "community" of higher ed institutions and commercial affiliates which have signed on as formal, fee-paying partners in the endeavor. Its direction and development are guided by member collaboration, while central resources are coordinated by a foundation and an elected board.

"Sakai (contrib)" represents experimental code not yet included in releases. See also "Sakai (core)".

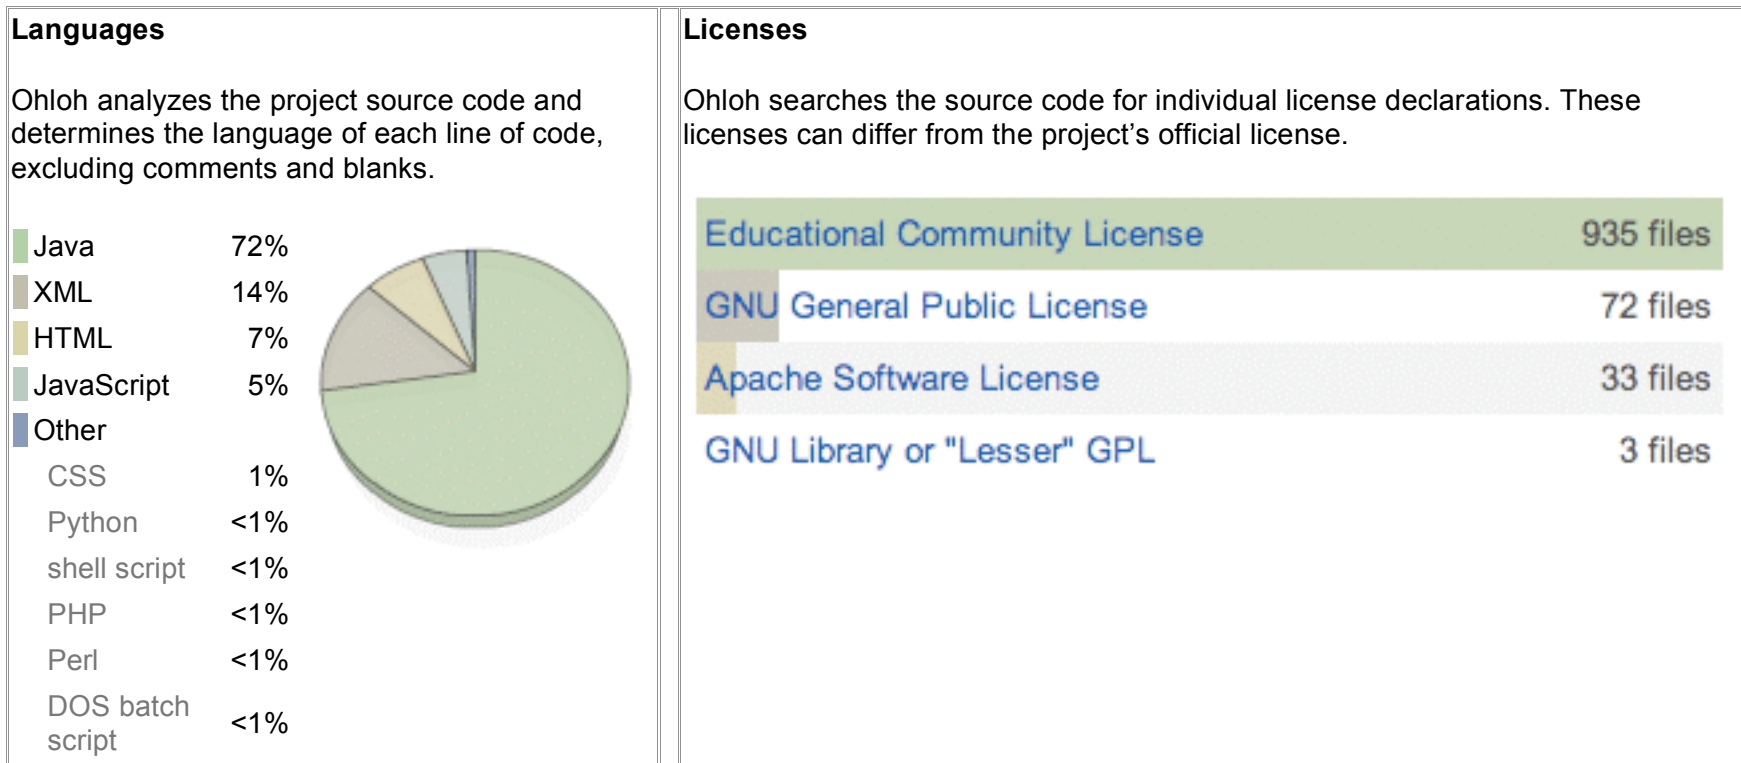

38 Active Developers

Over the history of the project, 40 developers have contributed code. However, only 38 have done so in the last year.

Moodle

Moodle is a learning management system for producing Internet-based course Web sites. It is written in PHP and is easy to install and use on Linux, Windows, Mac OS X, SunOS, BSD, and Netware 6. It has been designed to support modern pedagogies based on social constructionist theory, and includes activity modules such as forums, chats, resources, journals, quizzes, surveys, choices, workshops, glossaries, lessons, and assignments. It has been translated into over 70 languages, with more on the way, and supports the popular SCORM standard for content packaging. Moodle offers a free alternative to commercial software such as WebCT or Blackboard, and is being used by a growing number of universities, schools, and independent teachers for distance education or to supplement face-to-face teaching.

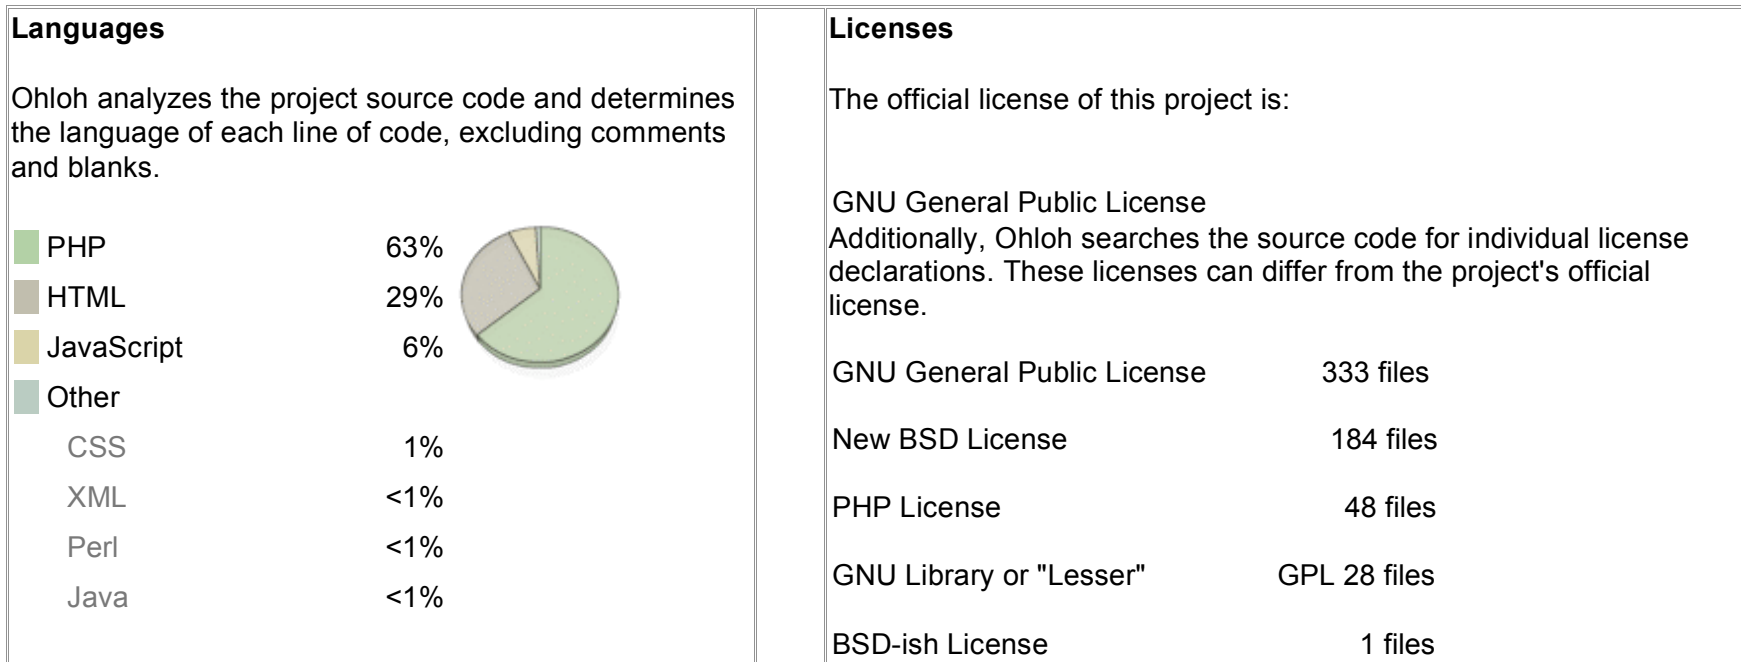

Contributors

Over the history of the project, 115 developers have contributed code. However, only 70 have done so in the last year.

Contributor	Comment Ratio	Person Years	Primary Language	Lines modified
moodler	15.4%	4.2	PHP	667,594

This project is enlisted in 2 repositories (see details). The source code repositories show that the project is over 5 years old.

Codebase History

Factoids

- Mature, well-established codebase
- Very large, active development team
- Few source code comments
- PHP License may conflict with GPL

Project Cost

This calculator estimates how much it would cost to hire a team to write this project from scratch.

Include:	Markup and code
Codebase	970,262 LOC
Effort (est.)	265 Person Years
Avg. Salary	\$79,369 per year [based on Washington DC salaries, April 2005 ¹
Total	\$21,066,892

¹ Based on data from the Bureau of Labor Statistics for Computer Analyst and Scientists for the Washington-Baltimore Metropolitan area. The Washington-Baltimore average from the April 2005 survey was \$78,304 based on \$38.03 per hour and working 2,059 hours per year. The national average from the September 2005 survey was \$35.28 per hour for \$72,642 per year. At the same times, average salaries for university and college (postsecondary) teachers was \$56,616 in the Washington-Baltimore area and \$68,123 nationally based on working an average 1,585 hours per year.

Endnotes

Data from Table 2.1, "National Compensation Survey: Occupational Wages in the United States, June 2005," Bureau of Labor Statistics, U.S. Department of Labor, 7 December 2005.

Earnings (Hourly; Compensation) is defined as "The National Compensation Survey defines hourly earnings as the straight-time hourly wages or salaries paid to employees. They include incentive pay (commissions, piece rate payments, and production bonuses), cost-of-living adjustment, and payments for income deferred due to participation in a salary reduction plan. Excluded are premium pay for overtime, shift differentials, draws, nonproduction bonuses, tips, and uniform and tool allowances. From "Glossary of Terms," Bureau of Labor Statistics, U.S. Department of Labor, August 1998, page 18.

Workweek (Work Schedule) is defined as "Usually, the expected or actual period of employment for the week, usually expressed in number of hours. Some uses of the term may relate to the outside dimensions of a week (e.g., 7 consecutive days). Glossary, page 73.

Subject: Ohloh metrics for Sakai development
Sender: khomotso@gmail.com
To: sakai-dev Dev <sakai-dev@collab.sakaiproject.org>,
advocacy <advocacy@collab.sakaiproject.org>

Ohloh offers a free service to analyze open source code repositories for development metrics. Our own Seth Theriault has done the necessary work to set up Sakai for analysis, and the analysis for all the modules was finally completed over the weekend. You can see the results here:

<http://www.ohloh.com/projects/3551>

It's interesting to compare this with Moodle:

<http://www.ohloh.com/projects/25>

Also note that the Sakai analysis only goes back as far as the svn reorganization last April, and it's only for the modules that are included in the release.
