## National Center for Education Statistics

Mark Schneider
Commissioner
The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high-priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and highquality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public. Unless specifically noted all information contained herein is in the public domain.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

## Commissioner's Statement

## Introduction

Reliable, accurate, and timely data are necessary to monitor the progress of U.S. education and respond to its opportunities and challenges. To ensure such data are available, Congress has mandated that the National Center for Education Statistics (NCES) produce an annual report, The Condition of Education. This year's report presents indicators of important developments and trends in U.S. education. These indicators focus on participation and persistence in education, student performance and other measures of achievement, the environment for learning, and resources for education. In addition, this year's volume contains a special analysis that examines changes in student coursetaking in high school using national transcript data from 1982 to 2005. While the analysis focuses on the credit accrual of high school graduates, it also takes a special look at the coursework of high school dropouts and courses taken for college credit.

This statement summarizes the main findings of the special analysis and the 48 indicators that appear in the five following sections. Each indicator discussed is referenced by its number (e.g., indicator 10) in the volume.

## Special Analysis on High School CourseTAKING

To explore the coursetaking patterns and trends of high school students, the special analysis uses national data from two surveys sponsored by NCES: the high school longitudinal transcript studies, which provide information on high school graduates in 1982, 1992, and 2004, and the National Assessment of Educational Progress (NAEP) High School Transcript Studies, which cover the experiences of high school graduates in selected years from 1987 to 2005. Drawing from these sources and others, the analysis reveals that:

- Most states have enacted minimum requirements for graduation focusing on the numbers and types of courses that students take in high school, such as the New Basics coursetaking recommendations. A growing number of states also require the passing of "exit exams" that test proficiency or competency in specific subjects.
- Between 1982 and 2004, the average number of course credits accrued by high school graduates increased 19 percent, from 21.7 to 25.8 credits. Graduates in 2004, compared with those in 1982, earned an average of 4.3 versus 4.0 credits in English, 3.6 versus 2.7 credits in mathematics, and 3.2 versus 2.2 credits in science.
- In 2004, more high school graduates had completed advanced courses in mathematics and science than in 1982in particular, in calculus, chemistry I, and physics I. For example, the average number of credits that graduates earned in algebra and more advanced mathematics courses increased from 1.9 to 3.1 ; in chemistry, from 0.4 to 0.7 ; and in physics, from 0.2 to 0.4 . Graduates also earned more credits in English and foreign languages during this period.
- The percentage of students who took Advanced Placement (AP) examinations increased between 1997 and 2005, with the total number of students taking these examinations doubling. Although the average scores in AP examinations have remained relatively stable, there has been a decrease (from 65 to 59 percent) in the percentage of examinations resulting in a qualifying score of 3.0 or more.
- Differences in advanced coursetaking by sex and race/ethnicity are evident

# Commissioner's Statement 

Continued
in mathematics, science, English, and foreign language study. Since 1998, female graduates have been more likely than male graduates to complete some advanced science coursework, though no measurable differences by sex were detected in the proportions of graduates who took the highest levels of science or mathematics coursework. In addition, Asian graduates were more likely than graduates from other racial/ethnic groups to complete advanced courses in mathematics, science, English, and foreign language study in 2004.

## Participation in Education

As the U.S. population increases in size, so does its enrollment at all levels of public and private education. At the elementary and secondary levels, growth is due largely to the increase in the size of the school-age population. At the postsecondary level, both population growth and increasing enrollment rates help account for rising enrollments in undergraduate, graduate, and first-professional programs. The cohorts of learners have become more diverse, with students who are members of racial/ethnic minorities or who speak a language other than English at home making up an increasing proportion of the school-age population over time.

- Between 1970 and 2005, enrollment rates increased for children ages 5-6, who are typically in kindergarten or 1st grade, and for adults ages $18-34$, who are typically in postsecondary education. Youth ages 18-19 experienced the largest overall increase in enrollment during this period, from 48 to 68 percent. The overall enrollment rate for 2005 was up from 61 percent of students in this age group in 2000 (indicator 1).
- The percentage of children ages 3-5 who attended center-based early childhood
care and education programs-including day care centers, Head Start programs, preschool, nursery school, prekindergarten, and other early childhood programs-increased from 53 percent in 1991 to 60 percent in 1999 and then decreased to 57 percent in 2005. A greater percentage of nonpoor children ages 3-5 participated in center-based programs than poor children (indicator 2).
- In 2007, public school enrollment in the United States is expected to approach about 50 million students: 34.6 million in prekindergarten through 8th grade and 15.0 million in grades 9 through 12. Total public school enrollment is projected to set new records each year from 2007 through 2016, at which time it is expected to reach 53.3 million. The South is projected to experience the largest increase in enrollments of all regions in the country (indicator 3).
- The percentage of all children enrolled in private schools in kindergarten through grade 12 remained near 10 percent between 1989-90 and 2003-04. Roman Catholic schools continued to have the largest percentage of total private school enrollment during this period, but there was a shift in the distribution of students from Roman Catholic to other religious and nonsectarian private schools at both the elementary and secondary levels (indicator 4 ).
- Between 1972 and 2005, the percentage of racial/ethnic minority students enrolled in the nation's public schools increased from 22 to 42 percent, primarily due to growth in Hispanic enrollments. In 2005, Hispanic students represented 20 percent of public school enrollment, up from 6 percent in 1972. The distribution of minority students in public schools

# Commissioner's Statement 

Continued
differed across regions of the country, with minority public school enrollment ( 54 percent) in 2005 exceeding White enrollment (46 percent) in the West (indicator 5).

- The number of children ages 5-17 who spoke a language other than English at home more than doubled between 1979 and 2005. Among school-age children who spoke a non-English language at home, the total number who spoke English with difficulty increased from 3 to 6 percent of all 5 - to 17 -year-olds between 1979 and 2000 and did not measurably change after that. In 2005, the majority of school-age children who spoke a language other than English at home spoke Spanish. Higher percentages of poor and near-poor children spoke a non-English language at home than nonpoor children (indicator 6).
- Since the inception of the Individuals with Disabilities Education Act (IDEA) in the mid-1970s, youth ages 3-21 receiving special education services have increased nearly every year. In 1976-77, some 3.7 million youth were served under IDEA ( 8 percent of total public school enrollment), and by 2005-06, some 6.7 million youth received these services ( 14 percent of total public school enrollment). Specific learning disabilities were the most prevalent of all disabilities among youth ages 3-21 and experienced the largest increase in the percentage of the population served (indicator 7).
- Over the past three and a half decades, total undergraduate enrollment in degreegranting postsecondary institutions has generally increased and is projected to continue to do so through 2016. From 2006 to 2016, women's undergraduate enrollment is expected to continue
growing faster than men's, and women are projected to make up 60 percent of enrollment in 2016. In addition, full-time undergraduate enrollment is expected to increase more rapidly than part-time enrollment, and enrollment at 4-year institutions is expected to grow faster than at 2-year institutions (indicator 8).
- Graduate and first-professional enrollments in degree-granting institutions increased between 1976 and 2005, with female enrollment increasing by a larger percentage than male enrollment for both types of programs. During this period, minority enrollment increased 269 percent in graduate programs, and 331 percent in first-professional programs. According to projections, women exceeded 50 percent of total first-professional enrollment for the first time in 2006. Among minorities, Hispanic and Asian/Pacific Islander enrollments have experienced the greatest growth (indicator 9).
- The percentage of the population age 16 or older participating in adult education-including basic skills training, apprenticeships, work-related courses, personal interest courses, English as a Second Language (ESL) classes, and part-time college or university degree programs-increased between 1995 and 2001 and then declined in 2005. The most popular forms of adult education in 2005 were work-related courses and personal interest courses (indicator 10).

## Learner Outcomes

How well does the American educational system—and its students-perform? Data from national and international assessments of students' academic achievement can help address this question, as can data on adults' educational and work experiences, literacy

# Commissioner's Statement 

Continued
levels, and earnings. In some areas, such as mathematics and science, the performance of elementary and secondary students has shown some improvement over the past decade, but not in all grades assessed and not equally for all groups of students. The association between education and the earnings and employment of adults helps underscore the importance of education for individuals and society and the outcomes of different levels of educational attainment.

- National reading scores of 4th- and 8th-graders assessed by the National Assessment of Educational Progress (NAEP) have varied little over time, though both were higher in 2005 than in 1992. The reading scores of 12 thgraders, however, decreased 6 points during this period. The percentage of 4thgraders performing at or above Proficient (indicating solid academic achievement) increased between 1992 and 2005 (from 29 to 31 percent) and has remained steady since then. The percentage of 8thgraders performing at or above Proficient did not change measurably during the 10year period, but the percentage of 12thgraders performing at this level decreased from 40 to 35 percent (indicator 11).
- The average mathematics score of 12 thgraders on the 2005 NAEP mathematics assessment was set at 150 (on a scale of $0-300$ ). Some 23 percent of 12thgraders performed at or above Proficient (indicating solid academic performance), whereas 39 percent performed below Basic (indicating performance below partial mastery of fundamental skills) (indicator 12).
- In 2005, the average NAEP science score of students was higher than in previous assessment years at grade 4, was not measurably different at grade 8 , and
was lower at grade 12 than in 1996. The percentages of 4th- and 8th-graders who performed at or above Proficient (29 percent in 2005) were not measurably different from the percentages who did so from 1996 to 2005, while the percentage of 12 th-graders performing at this achievement level was lower in 2005 than in 1996 (indicator 13).
- Results from NAEP indicate that the differences between White and Black and Hispanic scores in reading and mathematics fluctuated at the 4th and 8th grades between 1990 and 2005. Recently, between 2003 and 2005, these gaps narrowed for most groups. Looking at the reading performance of 4th-graders in 2005, Blacks scored, on average, 29 points lower than Whites (on a 0-500 scale), and Hispanics scored 26 points lower than Whites. Similar patterns were seen in the mathematics performance of 8th-graders (indicator 14).
- NAEP long-term trend results indicate that the reading and mathematics achievement of 9- and 13-year-olds improved between the early 1970s and 2004. In reading, 9-year-olds scored higher in 2004 than in previous assessments, with an increase of 7 points between 1999 and 2004. In mathematics, the achievement of 9- and 13-year-olds in 2004 was the highest of any assessment year. Though the performance of 17 -year-olds on both NAEP assessments was not measurably different from that in prior years, scores for Black and Hispanic students have improved since the early 1970s (indicator 15).
- According to data from the Early Childhood Longitudinal Study, Kindergarten Class of 1998-99 (ECLS-K), 5th-grade children who lived in households below the poverty

# Commissioner's Statement 

Continued
threshold for all five rounds of the survey (fall 1998, spring 1999, spring 2000, spring 2002, and spring 2004) were less likely to demonstrate proficiency in specific reading and mathematics knowledge and skills than their counterparts who lived in households at or above the poverty threshold. Generally, students whose mothers had higher levels of education were more likely to master each reading and mathematics skill than students whose mothers had less education (indicator 16).

- The 2003 Trends in International Mathematics and Science Study (TIMSS) assessed students' mathematics performance in 25 countries at grade 4 and 46 countries at grade 8. Results from TIMSS showed that U.S. 4th- and 8th-graders performed above the international averages in three mathematics cognitive domains: knowing facts, procedures, and concepts needed to solve mathematical problems; applying knowledge of facts, skills, and procedures to create representations and solve routine problems; and reasoning to solve more complex problems through logical thinking (indicator 17).
- Results from the National Assessment of Adult Literacy (NAAL), which assessed adults age 16 or older in three types of literacy (prose, document, and quantitative), showed that while the average prose and document literacy scores of U.S. adults were not measurably different in 2003 from 1992, the average quantitative literacy score increased 8 points. In each type of literacy, 13 percent of adults scored at or above the Proficient level in 2003 (indicator 18).
- About 8 percent of youth ages 16-19 were neither enrolled in school nor working in 2006. In each year from 1986 through 2006, higher percentages
of Black and Hispanic youth than White youth were neither enrolled in school nor working. Youth from poor and nearpoor families were more likely than youth from nonpoor families to be neither in school nor working in each year observed (indicator 19).
- Young adults ages 25-34 who worked full time, full year and held at least a bachelor's degree had higher median earnings than their peers with less education between 1980 and 2005. This pattern generally held for male, female, White, Black, Hispanic, and Asian subgroups. Moreover, for the entire young adult population and generally for each subgroup, the gap in earnings by educational attainment grew during this period. For example, males with a bachelor's or higher degree earned 19 percent more than male high school completers in 1980, and 64 percent more in 2005 (indicator 20).

## Student Effort and Educational Progress

Many factors are associated with school success, persistence, and progress toward a high school diploma or a college or advanced degree. These include students' motivation and effort, learning experiences, and expectations for further education, as well as various family characteristics, such as parents' educational attainment and family income. Monitoring these factors and tracking educational attainment provide key indicators for describing the progress of students and schooling in the United States.

- In 1980 and 2002, high school sophomores were asked how much time they spent on homework per week. The percentage who reported spending more than 10 hours per week on homework increased from 7 to 37 percent between the two survey years. The general increase in the percentage

# Commissioner's Statement 

Continued
of students who reported spending this amount of time on homework was observed for both males and females (from 6 to 33 percent for males and from 8 to 41 percent for females) (indicator 21).

- When students were asked how often they came to school without books; without paper, pen, or pencil; and without their homework-all of which can be used as measures of student preparedness for school-the percentage of students who reported being chronically unprepared for school (i.e., "usually" or "often") was larger in 2002 than in 1980 or 1990. The percentage who reported coming to school "usually" or "often" without their homework in 2002 was 26 percent, up from 22 percent in 1980 and 18 percent in 1990 (indicator 22).
- The status dropout rate represents the percentage of an age group that is not enrolled in school and has not earned a high school credential (i.e., diploma or equivalent, such as a General Educational Development [GED] certificate). Status dropout rates for Whites, Blacks, and Hispanics ages 16-24 have each generally declined since 1972. Rates remained lowest for Whites and highest for Hispanics (indicator 23).
- Among public high school students in the class of 2003-04, about three-fourths of them graduated on time, as estimated by the percentage of an incoming freshman class that graduates 4 years later. The averaged freshman graduation rate in 2003-04 ranged from a low of 57.4 percent in Nevada to a high of 87.6 in Nebraska (indicator 24).
- Between 1972 and 2005, the rate at which high school completers enrolled in college in the fall immediately after high
school increased from 49 to 69 percent. After widening between the late 1970s and early 1980s, the gap in the immediate college enrollment rate between Blacks and Whites narrowed between 1999 and 2001, but has widened again since then. The gap between Hispanics and Whites widened between 1979 and 1998 and then again between 2002 and 2005. Since 1972, the immediate college enrollment rate of high school completers has increased faster for females than for males (indicator 25).
- Minority students accounted for roughly half of the growth in the number of associate's and bachelor's degrees earned between 1976-77 and 2004-05, and for 73 percent of the increase in the number of first-professional degrees earned. Among minority students, Asians/Pacific Islanders experienced the greatest rates of growth in the number of degrees earned (indicator 26).
- Some 86 percent of 25- to 29-year-olds had a high school diploma or equivalency certificate in 2006. This rate has remained between 85 and 88 percent over the last 30 years. The rate at which students in this age group completed at least some college education increased from 34 to 58 percent between 1971 and 2006, though increases were not consistent throughout the period. In most years, the rate for completing a bachelor's degree or higher was roughly half that for completing at least some college. Racial/ ethnic differences in levels of educational attainment remain (indicator 27).
- Women have earned a larger percentage of bachelor's degrees than men since the early 1980s overall, but the percentage they have earned in various fields has varied. For example, though women

# Commissioner's Statement 

Continued
earned 87 percent of the bachelor's degrees awarded in health professions in 2004-05, they earned less than a quarter of the bachelor's degrees awarded in computer and information sciences and engineering. Women have also made gains at the graduate level: in 2004-05, they earned 59 percent of master's degrees (up from 49 percent in 1979-80), and they earned just under half of doctoral degrees (up from 30 percent) (indicator 28).

## Contexts of Elementary and Secondary Education

The school environment is described by a number of features, including learning opportunities, student/teacher ratios, the backgrounds and qualifications of teachers, and the climate for learning. Monitoring these and other factors provides a fuller picture of the conditions in schools that can influence education. Society also influences and provides support for education, including learning activities that take place outside school, as well as financial support for education.

- Among all kindergarten through 8thgrade students in 2005 , some 43 percent participated in at least one afterschool activity. A larger percentage of female than male students were involved in arts, clubs, community service, religious activities, and scouts after school, but the pattern of participation was reversed for sports. In addition, a greater percentage of students from nonpoor families participated in at least one afterschool activity than students from poor and near-poor families (indicator 29).
- The ratio of students to teachers, which is frequently used as a proxy measure for class size, declined between 1990 and 2004 from 17.6 to 16.3 students per teacher for all regular public elementary, secondary, and combined schools. In
every year during this period, the student/ teacher ratios tended to be higher in public schools with larger enrollments than in public schools with smaller enrollments. For example, in 2004, regular public elementary schools with enrollments over 1,500 had 6.8 more students per teacher, on average, than elementary schools with enrollments under 300 (indicator 30).
- Approximately half of all students with disabilities in 2004-05 spent 80 percent or more of their day in a regular classroom, an increase from 45 percent in 1994-95. The percentage of time students spent in a general classroom varied by their race/ ethnicity. Compared with students with disabilities of any other race/ethnicity, a higher percentage of Black students with disabilities spent less than 40 percent of their day in a general classroom; a higher percentage also attended a separate school facility for students with disabilities (indicator 31).
- In the 2004-05 school year, there were 3,294 charter schools in the jurisdictions that allowed them, making up 4 percent of all public schools in the United States. Charter schools enrolled larger percentages of Black, Hispanic, and American Indian/Alaska Native students and lower percentages of White and Asian/Pacific Islander students than conventional public schools. A larger percentage of charter schools than conventional public schools had less than 15 percent of students eligible for free or reduced-price lunch (indicator 32).
- The number of full-time teachers in the United States rose from 2.6 to 3.3 million between 1993-94 and 2003-04. During this period, the percentage of full-time teachers who were under age 30 increased (from 12 to 18 percent), as

# Commissioner's Statement 

Continued
did the percentage who were ages $50-$ 59 (from 21 to 29 percent). There was no measurable change, however, in the percentage of full-time teachers who were age 60 and over (indicator 33).

- The percentage of public school principals who were female increased from 41 to 56 percent in elementary schools and from 14 to 26 percent in secondary schools between the 1993-94 and 2003-04 school years. In private schools, the percentage of female principals remained around 68 percent in elementary schools and about 34 percent in secondary schools. The percentage of principals who were age 55 or older also increased during this period, from 20 to 31 percent. This increase was particularly pronounced at the secondary level, where the percentage of principals in this age group increased from 17 to 30 percent in public schools and from 22 to 46 percent in private schools (indicator 34).
- Most schools employ staff who provide various support services directly to students. These student support staff, who include licensed or certified professionals (e.g., school counselors, social workers, nurses, and speech therapists) and teacher aides (e.g., special education, regular Title I, and library aides), made up 27 percent of all public school staff in the 200304 school year. Nearly all elementary and secondary schools reported having student support staff, with a larger number employed full time than part time (indicator 35).
- Between 1992 and 2004, the rate at which students ages 12-18 were victims of nonfatal crime-including theft, violent crime, and serious violent crime-at school declined 62 percent (from 144 to 55 crimes per 1,000 students). During the
same period, the rate of crimes against students at school declined 65 percent for theft (from 95 to 33 crimes per 1,000 students) and 54 percent for violent crimes (from 48 to 22 crimes per 1,000 students). In each year observed, the rates for serious violent crime-including rape, sexual assault, robbery, and aggravated assault-were lower when students were at school than away from school (indicator 36).
- Total elementary and secondary public school revenues increased 51 percent in constant dollars from 1989-90 to 200304. Federal and state revenues increased at a faster rate than all local revenues (both property tax revenue and other local revenue). The proportion of total revenue for public education from local sources declined, while the proportion of total revenue flowing to public schools from federal sources increased and the proportion from state sources stayed the same (indicator 37).
- Between 1989-90 and 2003-04, total expenditures per student in public elementary and secondary schools rose 27 percent in constant 2003-04 dollars, from $\$ 7,692$ to $\$ 9,762$. Among the five major categories of expenditures (instruction, administration, operation and maintenance, capital outlay and interest, and other), expenditures on capital outlay and interest increased the most (68 percent), followed by spending on instruction, operations and maintenance, and administration. In 2003-04, some 52 percent of the total amount spent went toward instructional expenditures. Total expenditures per student were highest in the Northeast, followed by the Midwest, West, and South (indicator 38).

# Commissioner's Statement 

- Differences between states accounted for a greater proportion of the variation in instruction expenditures per student among unified public school districts than did differences within states from 1989-90 to 2003-04. The between-state differences have increased since 1997-98, while the within-state differences have remained largely unchanged. The between-state variation accounted for 74 percent of the total variation in 1997-98, and 78 percent in 2003-04 (indicator 39).
- Total expenditures per student in public elementary and secondary schools in 2003-04 were highest in low-poverty school districts ( $\$ 10,857$ ), next highest in high-poverty school districts ( $\$ 10,377$ ), and lowest in middle- and middle-high poverty districts $(\$ 9,042$ and $\$ 9,045$, respectively). Between 1995-96 and 2003-04, total expenditures per student increased the most for the high-poverty districts ( 28 percent) and the least for the low-poverty districts ( 21 percent). Current expenditures per student, which include instructional, administrative, and operation and maintenance expenditures, followed a similar pattern (indicator 40).
- In 2003, elementary and secondary expenditures per student for the United States averaged $\$ 8,935$-which was higher than the average of $\$ 6,278$ for the member countries of the Organization for Economic Cooperation and Development (OECD) reporting data. At the postsecondary level, U.S. expenditures per student were $\$ 24,074$, higher than the OECD average of $\$ 11,254$. Wealthy countries such as the United States spent more per student and a larger share of their gross domestic product (GDP) per capita on education than less wealthy countries (indicator 41).

## Contexts of Postsecondary Education

The postsecondary education system encompasses various types of institutions under public, private not-for-profit, and private forprofit control and can be described according to a number of contextual factors. Important indicators of this context include student coursetaking and fields of study; the price of attending college; the availability of financial aid; the instructional responsibilities of faculty and staff; and the ways in which colleges and universities attract and compensate faculty.

- In 2004-05, business degrees made up 16 percent of all degrees awarded at the associate's degree level, 22 percent of degrees at the bachelor's degree level, and 25 percent of degrees at the master's degree level. Between 1997-98 and 200405 , the field of computer and information sciences grew by nearly 100 percent at the associate's level and by 57 percent at the master's level. At the doctoral level, the field of health professions and related clinical sciences grew by nearly 200 percent (indicator 42).
- Compared with students in most of the other OECD countries that report data, students in the United States were more likely to complete postsecondary degrees in arts and humanities and in business, social sciences, law, and "other" fields in 2004. U.S. students were less likely, however, than their peers in most of the other OECD countries reporting data to complete postsecondary degrees in engineering and health (indicator 43).
- Average inflation-adjusted salaries for fulltime instructional faculty have increased by 18 percent overall during the past 25 years, and average salaries rose for faculty in all academic ranks. However, after

# Commissioner's Statement 

Continued
increasing during the 1980s and 1990s, average salaries for faculty decreased 0.3 percent between 1999-2000 and 200506 . When combining salary with benefits, full-time instructional faculty across all types of institutions received a total compensation package in 2005-06 that was about 26 percent more than they had received in 1979-80. Faculty at private 4-year doctoral universities had higher salaries and more benefits than their colleagues at other types of institutions (indicator 44).

- The percentage of full-time college students ages $16-24$ who were employed increased from 34 to 49 percent between 1970 and 2005 , and there were also increases in the number of hours they worked per week. There was no measurable change in the percentage of part-time college students in this age group who were employed during this period. In 2005, approximately 85 percent of part-time college students were employed, but these students worked fewer hours in 2005 than they did in 1970 (indicator 45).
- Between 1992-93 and 1999-2000, the percentage of full-time, full-year undergraduates with federal loans increased from 31 to 44 percent, while the percentage receiving federal grants, available to those who qualify by income, remained near 30 percent. By 2003-04, both the percentages of undergraduates who had taken out loans and who had received grants had increased to 48 and 34 percent, respectively (indicator 46).
- For full-time dependent undergraduates attending postsecondary institutions in the 1990s, larger grants and loans generally compensated for increases in the total price of attending (including tuition and fees,
books and materials, and an allowance for living expenses). However, since 19992000, the net access price (the total price of attendance minus grants and loans) of attending a public 4 -year institution has increased, particularly among middleincome students. At private not-forprofit 4-year institutions, the net price of attending has increased only among lowincome students (indicator 47).
- The average total price for 1 year of fulltime graduate education ranged from $\$ 21,900$ for a master's degree program at a public institution to $\$ 41,900$ for a first-professional degree program at a private not-for-profit institution in 200304. Students attending full time typically received some type of financial aid to help cover their expenses, such as grants and assistantships awarded on a discretionary basis, subsidized, unsubsidized, or private loans, or grant aid from their employers. Compared with doctoral and first-professional degree students, few master's degree students enrolled full time. Students differed in the types and amounts of financial aid they received by the level of their degree program (indicator 48).

## Conclusion

The current state of U.S. education shows both promises and challenges. In the long-term, since the early 1970s, there has been improvement in the scores of 9 - and 13-year-olds on national reading and mathematics assessments, but the scores of 17 -year-olds have remained flat. However, in the short-term, since the early 1990s, progress on national assessments in reading and science achievement has been uneven or static, though mathematics performance has improved among 4th- and 8th-graders.

## Commissioner's Statement

 ContinuedOther measures of progress indicate that high school graduates are taking more courses and completing more advanced courses than they did in the early 1980s, status dropouts have declined since the 1970 s, and rates of crime and violence in schools have declined since 1992. At the same time, the number of school-age children who spoke a language other than English at home more than doubled between 1979 and 2005. In addition, differences between states in the amount spent on instruction per student by unified public school districts have increased since 1997-98.

The U.S. education system also shows signs of continued growth for years to come. In elementary and secondary education, enrollments have followed population shifts and are projected to increase each year through 2016 to an all-time high of 53 million, with the South expected to experience the largest increase in enrollments. Rates of enrollment in degree-granting postsecondary education at both the undergraduate and graduate levels have increased and are projected to continue to do so throughout the next 10 years.

NCES produces an array of reports each year that present findings about the U.S. education system. The Condition of Education 2007 is the culmination of a yearlong project. It includes data that were available by early April 2007. In the coming months, a number of other reports and surveys informing us about education will be released, including new results from the Na tional Assessment of Educational Progress and from international student assessments, as well as follow-ups to NCES longitudinal studies. Along with the indicators in this volume, NCES intends these surveys and reports to help inform policymakers and the American public about trends and conditions in U.S. education.

Mark Schneider
Commissioner
National Center for Education Statistics

## Reader's Guide

The Condition of Education is available in two forms: this print volume for 2007 and a Web version on the National Center for Education Statistics (NCES) website (http://nces.ed.gov/ programs/coe). The Web version includes the following: the 2007 Commissioner's statement, a user's guide, special analyses from 2000 through 2007, all indicators from this edition, and selected indicators from earlier editions of The Condition of Education. (See page xxvi for a list of all the indicators that appear on The Condition of Education website.)

The print volume of The Condition of Education 2007 includes the 2007 special analysis and five sections of indicators. Each section begins with a summary of the general topic areas covered by the indicators in the section. Each indicator contains a discussion along with a graph or table on the main indicator page, and one or more supplemental tables found in appendix 1. The supplemental tables provide data tables of the estimates used in the indicator discussion as well as additional estimates related to the indicator. Tables of standard errors for applicable estimate tables are available on the Web (http://nces.ed.gov/programs/coe). Additional information on data sources, analyses conducted, and definitions of variables and measures can be found in the supplemental notes in appendix 2. Finally, a glossary of key terms, bibliography, and index are provided at the end of the volume.

The "eye" icon on the main indicator page is located to the side of the graph or table and provides references for supplemental notes, supplemental tables, or other source(s) for more information relating to the indicator.

Indicators use the most recent national data available from either NCES or other sources serving the purposes of the indicator. When the source is an NCES publication, such as the Digest of Education Statistics, 2006 (NCES 2007-017), the publication can be viewed at the NCES website (http://nces.ed.gov/pubsearch).

## Data Sources and Estimates

The data in this report were obtained from many different sources, including state education agencies, local schools, and colleges and universities using surveys and compilations of administrative records. Users of The Condition of Education should be cautious when comparing data from different sources. Differences in procedures, timing, question phrasing, interviewer training, and so forth can all affect the comparability of results.

Most indicators in The Condition of Education summarize data from surveys conducted by NCES or by the Census Bureau with support from NCES. Brief explanations of the major NCES surveys used in this edition of The Condition of Education can be found in supplemental notes 3 and 4 of this volume. More detailed explanations can be obtained at the NCES website (http://nces.ed.gov) under "Surveys and Programs." Information about the Current Population Survey (CPS), another frequent source of survey data used in The Condition of Education, can be obtained in supplemental note 2 and also at http://www. census.gov/cps/.

Data for indicators reported in this volume are primarily from two types of surveys: universe surveys and sample surveys. First, some

# Reader's Guide 

indicators report data from entire populations (universe surveys), such as indicator 40 (Public Elementary and Secondary Expenditures by District Poverty). With this type of survey, information is collected from every member of the population. For example, data for indicator 40 was obtained for each school district (approximately 17,000 ) in the United States. When data from an entire population are available, estimates of the total population or a subpopulation are made by simply summarizing the units in the population or subpopulation. A universe survey is usually expensive and time consuming, so researchers often collect data from a sample of the population of interest (sample survey). Other indicators report data from such sample surveys, such as indicator 14 (Trends in the Achievement Gaps in Reading and Mathematics). Indicator 14 reports information from the National Assessment of Educational Progress (NAEP), which assesses a representative sample of students each year, rather than the entire population of students. When a sample survey is used, the statistical uncertainty introduced from having data from only a portion of the entire population must be considered in reporting estimates and making comparisons.

Various types of estimates are reported in The Condition of Education. Many indicators report the size of a population or a subpopulation, and often the size of a subpopulation is expressed as a percentage of the total population. In addition, the average (or mean) values of some characteristic of the population or subpopulation may be reported. The average is obtained by summing the values for all members of the population and dividing the
sum by the size of the population. An example is the annual average salaries of professors at degree-granting institutions (indicator 44). Still another population measure sometimes used is the median. The median is the value of a population characteristic above which 50 percent of the population is estimated to fall. An example is the median annual earnings of young adults who are full-time, full-year wage and salary workers (indicator 20).

Estimates based on universe and sample survey data may be affected by a wide range of potential data collection errors, such as coverage errors, response errors, coding errors, and data entry errors. Estimates of the size of these errors are typically not available.

Estimates calculated from data based on a sample of the population requires consideration of several factors before the estimates become meaningful. However conscientious an organization may be in collecting data from a sample of a population, there will always be some margin of error in estimating the size of the actual total population or subpopulation because the data are available from only a portion of the total population. Consequently, data from samples can provide only an estimate of the true or actual value. The margin of error, or the range, of an estimate depends on several factors, such as the amount of variation in the responses, the size and representativeness of the sample, and the size of the subgroup for which the estimate is computed. The magnitude of this margin of error is measured by what statisticians call the "standard error" of an estimate.

# Reader's Guide 

Continued

## Standard Errors

When data from samples are reported, as is the case with most of the indicators in The Condition of Education, the standard error is calculated for each estimate. The standard errors for all estimated totals, means, medians, or percentages reported in the supplemental tables of The Condition of Education can be viewed at the NCES website (http://nces.ed.gov/programs/coe).

The standard errors of the estimates for different subpopulations in an indicator can vary considerably. As an illustration, indicator 18 reports on the adult literacy scores of adults age 16 or older in the United States in 2003. The average quantitative scores of adults who spoke only English and those who spoke English and a language other than Spanish were each 289 (see supplemental table 18-1). In contrast to the similarity of these scores, their standard errors were 1.2 and 4.1, respectively (see table S18-1 in http://nces.ed.gov/programs/coe/2007/ section2/table.asp?tableID=757). The average score with the smaller standard error provides a more reliable estimate of the true value than does the average score with a higher standard error. Standard errors tend to diminish in size as the size of the sample (or subsample) increases. Consequently, for the same kinds of data, such as reading, mathematics, and science scores on the National Assessment of Educational Progress (indicators 11, 12, and 13), standard errors will almost always be larger for Blacks and Hispanics than for Whites, who represent a larger proportion of the population.

For indicator 20, which reports median annual earnings, special procedures are followed for computing the standard errors for these medians. See appendix $G$ of the source and accuracy statement for the Current Population Study (CPS) 2006 Annual Social and Economic supplement (ASEC) for information on how to calculate the standard errors (http://www. census.gov/apsd/techdoc/cps/cpsmar06.pdf).

## Data Analysis and Interpretation

Due to standard errors, caution is warranted when drawing conclusions about the size of one population estimate in comparison to another or about whether a time series of population estimates is increasing, decreasing, or staying about the same. Although one estimate may be larger than another, a statistical test may find that there is no measurable difference between the two estimates because of a large standard error associated with one or both of the estimates. Whether differences in means or percentages are statistically significant can be determined using the standard errors of the estimates.

Readers who wish to compare two sample estimates to see if there is a statistical difference will need to estimate the precision of the difference between the two sample estimates. This would be necessary if one wanted to compare, for example, the mean proficiency scores between groups or years in the National Assessment of Educational Progress. To estimate the precision of the difference between two sample estimates, one must find the standard error of the difference between the two sample estimates (sample estimate A , or $E_{A}$, and sample estimate B , or $E_{B}$ ). Expressed mathematically, the difference between the two estimates $E_{A}$ and $E_{B}$ is $E_{A}-E_{B}$.

The standard error of the difference (or $s e_{A-B}$ ) can be calculated by taking the square root of the sum of the two standard errors associated with each of the two sample estimates ( $s e_{A}$ and $\left.s e_{B}\right)$ after each has been squared. This can be expressed as

$$
s e_{A-B}=\sqrt{s e_{A}^{2}+s e_{B}^{2}}
$$

After finding the standard error of the difference, one divides the difference between the two sample estimates by this standard error

# Reader's Guide 

to determine the " $t$ value," or " $t$ statistic," of the difference between the two estimates. This $t$ statistic measures the precision of the difference between two independent sample estimates. The formula for calculating this ratio is expressed mathematically as

$$
t=\frac{E_{A}-E_{B}}{s e_{A-B}}
$$

The next step is to compare this $t$ statistic to 1.96 , which is a statistically determined criterion level for making a decision as to whether there is a difference between the two estimates. If the $t$ statistic is greater than 1.96 , then there is evidence that there is a difference between the two populations. Note that one cannot say for certain that the two estimates are different, only that there is evidence that the difference in estimates is not due to sampling error alone. If the $t$ statistic is equal to or less than 1.96 , then one is less certain that the observed difference is not due to sampling error alone. This level of certitude, or significance, is known as the ". 05 level of (statistical) significance."

As an example of a comparison between two sample estimates to determine whether there is a statistically significant difference between the two, consider the data on the performance of 12th-grade students in the reading assessment of the 1992 and 2005 National Assessment of Educational Progress (see supplemental table 11-1). The average scale score in 1992 was 292, and the average scale score in 2005 was 286 . Is the difference of 6 scale points between these two different samples statistically significant? The standard errors of these estimates are 0.6 and 0.6 , respectively (see standard error table S11-1 on the NCES website). Using the formula above, the standard error of the difference is 0.85 . The $t$ statistic of the estimated difference of 6 scale points to the standard error of the difference is 7.07 . This value is greater than
1.96-the critical value of the $t$ distribution for a 5 percent level of significance with a large sample. Thus, one can conclude that there was a statistically significant difference in the performance of 12th-graders between 1992 and 2005 in reading and that the reading score for 12th-graders in 2005 was lower than the reading score for 12th-graders in 1992.

For all indicators reporting estimates based on samples in The Condition of Education, differences between estimates (including increases or decreases) are stated only when they are statistically significant. To determine whether differences reported are statistically significant, two-tailed $t$ tests, at the 0.05 level, are typically used. The $t$ test formula for determining statistical significance is adjusted when the samples being compared are dependent. When the difference between estimates is not statistically significant, tests of equivalence will often be run. An equivalence test determines the probability (generally at the .15 level) that the estimates are statistically equivalent; that is, within the margin of error that the two estimates are not substantively different. When the difference is found to be equivalent, language such as x and $y$ "were similar" or "about the same" has been used; otherwise, the data will be described as having no measurable difference.

When the variables to be tested are postulated to form a trend, the relationship may be tested using linear regression, logistic regression, or ANOVA trend analysis instead of a series of $t$ tests. These other methods of analysis test for specific relationships (e.g., linear, quadratic, or cubic) among variables.

A number of considerations influence the ultimate selection of data years to feature in The Condition of Education. To be as timely as possible, the latest year of data is shown if available during report production. The choice

## Reader's Guide

Continued
of comparison years is based on the need to show the earliest survey year, as in the case of the National Assessment of Educational Progress and the international assessment surveys. In the case of surveys with long time frames, such as for enrollment, the decade's beginning year (e.g., 1980 or 1990) starts the trend line. Intervening years are selected in increments to show the general trend in the figures and tables. The narrative for the indicators typically compares the most current year's data with those from the initial year and then with those from the recent period. The narrative may also note the years in which the data begin to diverge from previous trends.

## Variations in Populations

In considering the estimates in the tables and figures shown in this volume and on the NCES website, it is important to keep in mind that there may be considerable variation among the members of a population in the characteristic or variable represented by the population estimate. For example, the estimated average mathematics reasoning score of 4th-graders in the United States in 2003 was 519 (see supplemental table 17-1). In reality, many students
scored above 519 points, and many scored below 519 points. Likewise, not all faculty salaries, benefits, and total compensation at postsecondary institutions were the same at each type of institution in 2005-06 (indicator 44). Because of this variation, there may be considerable overlap among the members of two populations that are being compared. Although the difference in the estimated means of the two populations may be statistically significant, many members of the population with the lower estimated mean may be above the estimated mean of the other population, and vice versa. For example, some percentage of young adults with a high school diploma or equivalent have higher earnings than young adults with a bachelor's degree or higher (indicator 20). The extent of such overlap is not generally considered in the indicators in this volume. Estimates of the extent of variation in such population characteristics can be computed from the NCES survey datasets or are available in published reports. For example, estimates of the variation in students' assessment scores can be found using the NAEP Data Explorer at http://nces.ed.gov/nationsreportcard/nde/ or in the appendixes to most NAEP reports.

## Reader's Guide

## Rounding and Other Considerations

Although values reported in the supplemental tables are generally rounded to one decimal place (e.g., 76.5 percent), values reported in each indicator are rounded to whole numbers (with any value of 0.50 or above rounded to the next highest whole number). Due to rounding, cumulative percentages may sometimes equal 99 or 101 percent, rather than 100 percent.

In accordance with the NCES Statistical Standards, many tables in this volume use a series of symbols to alert the reader to special statistical notes. These symbols, and their meaning, are as follows:

- Not available. Data were not collected or not reported.
$\dagger$ Not applicable.
Category does not exist.
\# Rounds to zero.
The estimate rounds to zero.
! Interpret data with caution. Estimates are unstable.
$\ddagger \quad$ Reporting standards not met. Did not meet reporting standards.
* $\quad p<.05$ Significance level. ${ }^{1}$

Notes
'The chance that the difference found between two estimates when no real difference exists is less than 5 out of 100 .

## Acknowledgments

This volume of The Condition of Education was authored by a team of analysts under the general direction of Michael Planty and Thomas Snyder with technical review by Marilyn Seastrom (Chief Statistician of NCES) and many others. Val Plisko (Associate Commissioner of NCES) provided overall guidance in the volume's development and reviewed the indicators. Barbara Kridl of MPR Associates, Inc. (MPR) was the managing editor of the publication. Andrea Livingston (MPR) wrote the style guide for this publication, edited the final volume, and assisted in writing and editing the Commissioner's Statement and the special analysis.

The key contributors to The Condition of Education are the authors of the indicators. As a matter of practice, the authorship of individual indicators is not given in the volume because each indicator reflects the joint effort of many analysts. Nonetheless, substantial expertise and analytical ability are required to craft an indicator from the survey data to tell an important story in a compelling manner using text, graphs, and tables economically and to perform the necessary statistical tests. Some indicators in this volume were originally conceived for The Condition of Education and involved extensive analyses of data. The rest were adapted from existing NCES reports or analyses authored by others.

A large team of analysts-including those from NCES and staff at the Education Statistics Services Institute (ESSI), which is funded by NCES and composed of staff from the American Institutes for Research (AIR) and a number of partner organizations-authored individual indicators. Authors include Michael Planty, Stephen Provasnik, William Hussar, Thomas Snyder, Patrick Gonzalez, and Jennifer Park (NCES); Grace Kena, Gillian HampdenThompson, Rachel Dinkes, Lauren Gilbertson and Mary Ann Fox (ESSI-AIR); and Susan Choy
and Xiaojie Li (MPR). Michael Planty (NCES), Stephen Provasnik (NCES), and Bruce Daniel (Kforce) authored the special analysis on high school coursetaking. Grace Kena (ESSI-AIR), Mary Ann Fox (ESSI-AIR), Kevin Bianco (ESSIMacroSys), Jana Kemp (ESSI-Child Trends), Gillian Hampden-Thompson (ESSI-AIR), and Lauren Drake (ESSI-MacroSys) updated and revised other sections of the report, helped with planning and the development of the production schedule, coordinated with the authors and reviewers, and circulated the indicator drafts and reviews.

Programming and other analytical assistance was provided by William Sonnenberg (NCES); Qingshu Xie (ESSI-MacroSys), Nancy Collins (ESSI), Elizabeth Jacinto (ESSI-AIR), DeAnn Brimhall (ESSI-AIR), and Jing Chen (ESSIAIR); and Xiaojie Li and Rosa Van (MPR). Technical and copyedit reviews were conducted by Daniel McGrath, Zeyu Xu, Aparna Sundaram, Alexandra Henning, Xiaolei Wang, Akemi Kinukawa, Robert Stillwell, Kevin Bromer, Alison Slade, Jed Tank, Stephen Mistler, Stephen Hocker, Matthew Adams, Thomas Nachazel, Sandra Eyster, Kristin Flanagan, and Martin Hahn (ESSI-AIR).

Alicia Broadway (MPR) proofread the text and checked the numbers against their original sources. Natesh Daniel and Patti Gildersleeve (MPR) did the desktop publishing of the publication with help from contractor Joe Becker and prepared it for printing. Helen Jang (MPR) headed the team responsible for updating and revising the Web version of The Condition of Education. She was assisted by Nick Branigan, John Vavricka, Stephanie Nevill, David Jimenez, and Leslie Retallick (MPR). These Web materials were reviewed by a team of reviewers that included Jerry Malitz and Dean Restivo (NCES). Julia Marshall prepared the index. Natesh Daniel (MPR) designed this year's cover.

## Acknowledgments

 ContinuedThe efforts of many people who reviewed individual indicators and the entire volume, often under tight deadlines, are greatly appreciated. Each indicator was assigned to at least two NCES staff members, who followed it through all phases of development from initial plans to final review. Julia Bloom, Stephen Broughman, Susan Broyles, Kathryn Chandler, Chris Chapman, Arnold Goldstein, James Griffith, Kerry Gruber, Lee Hoffman, Lisa Hudson, Andrew Kolstad, Edith McArthur, Frank Morgan, Gail Mulligan, Larry Ogle, Eugene Owen, Jeffrey Owings, Sabrina Ratchford, Elois Scott, John

Sietsema, Emmanuel Sikali, William Sonnenberg, Peter Tice, and John Wirt (NCES) provided detailed and helpful reviews of the indicators, special analysis, or other parts of the volume. Duc-Le To and Anne Riccutti (IES) reviewed the special analysis on high school coursetaking.

A number of individuals from academia served as external reviewers: Sandy Baum, Frederick Hess, Lyle Jones, David Monk, Thomas Smith, and Leanna Stiefel.

## List of Indicators on The Condition of Education Website (2000-2007)

#### Abstract

This List of Indicators includes all the indicators that appear on The Condition of Education website (http://nces.ed.gov/programs/coe), drawn from the 2000-2007 print volumes. The list is organized first by section and then by subject area. Thus, the indicator numbers and the years in which the indicators were published are not sequential.

## High School Coursetaking

Michael Planty, Stephen Provasnik, and Bruce Daniel

## Introduction

Using the national data from high school transcript studies conducted from 1982 to 2005, this special analysis addresses the following questions related to students' coursetaking patterns and trends during this period:

- What do states require and what do schools offer for coursework?
- How many course credits do students earn by high school graduation, on average, and how has the number of credits changed, overall and by subject, since the 1980s?
- What percentage of high school graduates complete advanced courses in science, in mathematics, in English, and in foreign languages?
- Do these percentages vary across student characteristics, including sex, race/ethnicity, and school control?
- What is the coursetaking pattern in 9th and 10th grades for students who drop out compared with students who graduate?
- What percentage ofhigh school studentstake Advanced Placement (AP) examinations, and how well do they do?

The first section of this special analysis describes state-level standards related to coursework and high school exit examinations in all 50 states and the District of Columbia, which is treated as a state in this analysis. This is followed by a discussion of the availability of advanced course offerings in public schools. ${ }^{1}$ Both requirements and offerings provide a context for examining the patterns of student coursetaking as they relate to minimum standards and expectations. The second section describes the number and types of credits that public and private high school graduates earned. It then examines the percentages and characteristics
of public and private high school graduates who took advanced courses in science, mathematics, English, and foreign languages. The special analysis concludes with a summary of key findings.

## Requirements and Offerings

## State Standards for Coursetaking

Many states have enacted minimum requirements for graduation that focus on the number and types of courses that students take in high school and the passing of standardized state tests of proficiency or competency in specific subjects. Starting in the early 1980s, many states adopted or added requirements patterned after the New Basics coursetaking standards recommended by the National Commission on Excellence in Education (NCEE) for high school graduation (Alexander and Pallas 1984; Chaney, Burgdorf, and Atash 1997). First articulated in A Nation at Risk (NCEE 1983), the New Basics recommendations called for all high school students to complete 4 years of English; 3 years each of mathematics, science, and social studies; and a half-year of computer science. For college-bound students, the New Basics also called for the completion of 2 years of a foreign language.

Currently, 37 states now require public high school students to take at least 20 credits (in Carnegie units ${ }^{2}$ ) of coursework; 8 states require fewer than 20 credits; and other states' course graduation requirements are determined locally (see table 1). ${ }^{3}$ Of those states with coursetaking requirements, 37 require 4 or more years of English, 31 require 3 or more years of social studies, 27 require 3 or more years of mathematics, and 23 require 3 or more years of science.

## State Standards for Exit Exams

Along with course requirements, in 2006, some 22 states required public school students (and, in a few states, private school students ${ }^{4}$ ) to pass

high school exit examinations to receive a high school diploma (see figure 1) (Center on Education Policy [CEP] 2006). Three more states will adopt such "exit exams" between 2008 and 2012: Washington in 2008, Maryland in 2009, ${ }^{5}$ and Oklahoma in 2012. Most of these 25 states' exit exams are aligned with 10 th-grade proficiency standards or higher, but some are aligned with 8th- and 9th-grade proficiency standards.

In 2006, some 65 percent of the nation's public high school students were enrolled in a school with an exit exam requirement (CEP 2006). High school exit exam requirements are most prevalent in the southern and western states. The few exceptions are in Indiana, Massachusetts, Minnesota, New Jersey, New York, and Ohio.

Given this geographic distribution, minority public school students are the group most affected by state exit exam requirements: 76 percent of minority public high school students were required to pass an exit exam for graduation in 2006, compared with 58 percent of all White public high school students (CEP 2006, table 2).

The number of examinations required for graduation and the subjects in which they are required vary by state (see supplemental table SA-1). In the 22 states with exit exams in effect and in the 3 states with exit exams that will go into effect between 2008 and 2012, students must pass both an English/language arts and a mathematics exit exam. In addition, 19 of

Figure 1. States with mandatory exit examinations, by subject, and states phasing in exit examinations, by date: 2006

NOTE:States labeled with years are scheduled to institute exit examinations in the year shown. Six of the states shown with mathematics, English, and science will institute their science exit examination between 2007 and 2010. Utah had planned to enforce an exit exam requirement in 2006, but that year they decided not to withhold diplomas from students who failed the examination if they met other graduation requirements. See supplemental table SA-1 for a complete list. SOURCE:Center on Education Policy. (2006). State High School Exit Exams: A Challenging Year, adapted from table 1, data from state departments of education, June 2006.
these 25 states will require an exam in science by 2012 , and 13 states will require a U.S. history/social studies exam. ${ }^{6}$

Since 2002, all states with an exit exam have required both an English/language arts and a mathematics exam. The total number of states with a mandatory science exit exam has increased from 7 states in 2002 to 11 states in 2006, and is projected to increase to 19 states by 2012.

## Advanced Course Offerings

The number of advanced courses high school students take is limited by what is offered. This section examines the extent to which public schools offer college-level coursework to high school students, available as Advanced Placement (AP), International Baccalaureate (IB), and dual-credit courses, all of which are described below. ${ }^{7}$

AP courses and their end-of-course examinations are developed and administered by the College Board. Students who score a 3.0 or better
(on a 5.0 point scale) may earn college credit or advanced standing in a college in the subject area in which the course/exam was taken. IB courses are defined as courses that make up a 2-year liberal arts curriculum that leads to an IB diploma and meets the requirements established by the IB program. Students taking these courses, typically in grades 11 and 12, must meet all requirements and pass IB examinations in each subject area in order to receive the IB diploma. In some schools, students who are not seeking an IB diploma are allowed to take individual IB courses. AP and IB postsecondary credit is given at the discretion of the colleges and therefore students receive this credit after they have applied and been accepted to a college. Dual-credit courses allow students to earn both high school and postsecondary credits for a single course, which is considered an actual college course. Thus, the dual credit earned is usually recorded on a college transcript from the postsecondary institution administering the course. The descriptions of college-level course offerings in this section were taken from a 2002-03 survey of a nationally representative

## High School Coursetaking

## Continued

sample of public high schools (Waits, Setzer, and Lewis 2005).

Overall, in 2002-03, some 71 percent of public high schools offered at least one dual-credit course, 67 percent offered AP courses, and 2 percent offered IB courses (see supplemental table SA-2). The larger the enrollment of a school, the more likely that school was to offer AP and/or dual-credit courses: 40 percent of small schools (those with an enrollment of less than 500) offered AP courses, compared with 82 percent of medium-sized schools (those with an enrollment of 500 to 1,199 ) and 97 percent of large schools (those with an enrollment of 1,200 or more) (see figure 2). Similarly, 63 percent of small schools offered courses for dual credit, compared with 75 percent of mediumsized schools and 82 percent of large schools.

Public schools located in rural areas were less likely to report offering AP courses ( 50 percent) than
public schools in cities ( 77 percent), urban fringe areas ( 87 percent), and towns ( 72 percent) (see supplemental table SA-2). Dual-credit courses, in contrast, were less likely to be offered in public schools located in cities than in public schools located in towns or urban fringe areas ( 65 vs. 79 and 74 percent, respectively). Seventy percent of rural schools offered courses for dual credit.

Public schools with the lowest minority enrollment (those in which minority students made up less than 6 percent of the enrollment) were the least likely to offer AP courses when compared with schools with higher minority enrollments. Among public schools that offered dual credits, however, schools with the highest minority enrollment were the least likely to offer these courses when compared with schools with lower minority enrollments.

State standards and advanced course offerings provide a context for understanding student

Figure 2. Percentage of public high schools that offered dual-credit courses, Advanced Placement (AP), and International Baccalaureate (IB), by school enrollment: 2002-03

[^1]coursetaking patterns. The next section presents trends in the coursetaking patterns of high school graduates over more than two decades, from 1982 to 2004.

## Coursetaking Patterns

National data on public and private high school student coursetaking and educational attainment come from two sets of surveys sponsored by the U.S. Department of Education's National Center for Education Statistics (NCES): the high school longitudinal transcript studies-including the High School and Beyond Longitudinal Study of 1980 Sophomores, "First Follow-up" (HS\&B-So:80/82); the National Education Longitudinal Study of 1988 (NELS:88/92), "Second Follow-up, High School Transcript Survey, 1992"; and the Education Longitudinal Study of 2002 (ELS:2002/04), "High School Transcript Study" -and the National Assessment of Educational Progress (NAEP) High School Transcript Studies (HSTS), selected years, 1987-2005.

The high school longitudinal transcript studies provide information on graduates of public and private high schools in 1982, 1992, and 2004. The NAEP High School Transcript Studies (HSTS) cover the experiences of public and private high school graduates in 1987, 1990, 1994, 1998, 2000, and 2005. The HSTS gathers information from the transcripts of students in public and private schools nationwide. Both survey systems are part of larger studies that track students' performance in high school.

Credits on a student's transcript quantify the amount of coursework that a student has completed. Credits can be organized by subject and placed in taxonomies, each of which includes courses either of similar academic challenge and difficulty or at the same stage in the progression of learning in a subject. ${ }^{8}$ However, because credits cannot measure the breadth or depth of the course content, they cannot be used to measure how the curriculum may have changed
over time or how much high school courses with similar transcript titles vary across classes and schools. Even courses with the same titles may vary considerably in terms of their content and what they demand of students.

Transcript data recording the number of credits that students earned in all their high school classes were collected from nationally representative samples of high school students beginning with the longitudinal study in 1982. Drawing upon these data, the next section of this analysis presents trends in the coursetaking patterns of public and private high school graduates between 1982 and 2004. ${ }^{9}$

## Credits Earned

From the early 1980s, when states began to increase the number of courses required to receive a high school diploma, the average number of credits earned by high school graduates increased from 21.7 credits in 1982 to 25.8 credits in 2004 (see supplemental table SA-3). When looking at the number of credits earned by subject in 2004 versus 1982, graduates earned an average of 4.3 versus 4.0 credits in English, 3.6 versus 2.7 credits in mathematics, and 3.2 versus 2.2 credits in science. The amount of college-preparatory coursetaking in mathematics and science also increased markedly between 1982 and 2004. For example, the average number of credits that graduates earned in algebra and more advanced mathematics courses increased from 1.9 to 3.1 ; in chemistry, it increased from 0.4 to 0.7 ; and in physics, it increased from 0.2 to 0.4 .

These increases in credits earned in mathematics, English, and science have not coincided with a decline in other coursework. In fact, credits earned in other subjects have increased. For example, comparing 1982 and 2004, graduates earned an average of 3.2 versus 3.9 credits in history/social studies, 1.4 versus 2.1 in arts, and 1.1 versus 2.0 credits in foreign languages

## High School Coursetaking

## Continued

(see figure 3). The only subject area in which the number of credits earned has decreased over this time period is vocational coursetaking. Vocational coursetaking decreased, from an average of 4.4 credits earned in 1982 to 3.5 credits earned in 2004. Vocational courses are organized educational programs, services, and activities that are directly related to the preparation of individuals for paid or unpaid employment, or for additional preparation for a career
that requires certification or training other than a bachelor's or an advanced degree.

These general increases in credits earned since 1982 are, in large part, a product of more graduates taking more advanced courses. In mathematics, for example, between 1982 and 2004, the percentage of graduates who completed a year of geometry increased from 47 to 76 percent, the percentage who completed

Figure 3. Average number of Carnegie units earned by high school graduates in various subject areas: 1982 and 2004

[^2]a semester or more of algebra II increased from 40 to 67 percent, and the percentage who completed a semester or more of analysis/precalculus increased from 6 to 28 percent (see supplemental table SA-4). ${ }^{10}$ Similarly, in science, the same trends are evident: during these years, the percentage of graduates who completed a year of chemistry increased from 32 to 64 percent, the percentage who completed a year of physics increased from 15 to 33 percent, and the percentage who completed a year each of biology, chemistry, and physics increased from 11 to 26 percent.

Coursetaking varied by students' sex and race/ethnicity over time and within each year. In 1982, on average, females earned 0.35 more total credits than males (see supplemental table SA-3). However, by 2004, no measurable differences were detected. In 1982, males earned 0.14 more credits in both mathematics and science than did females, but by 2004, no measurable differences were detected.

In 1982, on average, Asian/Pacific Islander graduates earned more total credits than graduates of any other race/ethnicity. By 2004, these differences were no longer evident. However, in both 1982 and 2004, Asian/Pacific Islander graduates earned more credits in both mathematics and science than did graduates of any other race/ethnicity.

## Trends in Advanced Coursetaking

## Science and Mathematics

This section shows trends between 1982 and 2004 in the highest level of science and mathematics coursework that high school graduates completed. In 1982, some 35 percent of high school graduates had completed advanced science coursework (i.e., at least one course classified as more challenging than general biology); this percentage increased to 68 percent
by 2004 (see figure 4 and supplemental table SA-5). Most of this increase is attributable to increases in completion of chemistry I and/or physics I. The percentage of graduates who had completed at least one course of either chemistry II, physics II, and/or advanced biology fluctuated from year to year and ultimately increased just 3 percentage points, from 15 to 18 percent between 1982 and 2004. ${ }^{11}$

The percentage of high school graduates who had completed courses in advanced mathematics (i.e., completed at least one course classified as more challenging than algebra II) increased from 26 percent in 1982 to 50 percent in 2004 (see figure 5 and supplemental table SA-6). Moreover, the percentage of graduates who had completed a calculus-level course more than doubled over this period (from 6 to 14 percent). ${ }^{12}$

As was the case in 1998 and 2000 (data not shown), in 2004, female graduates were more likely than male graduates to have completed some advanced science coursework ( 71 vs. 65 percent) (see supplemental table SA-7). This difference, however, is mostly attributable to the larger percentage of female than male graduates who completed a course in chemistry I or physics I. There were no measurable differences between the percentage of female and male graduates who completed coursework in chemistry I and physics I or in the percentage who completed a course in chemistry II, physics II, and/or advanced biology. Unlike in 1998 and 2000 (data not shown), in 2004, female graduates were more likely than male graduates to have completed some advanced mathematics courses (e.g., trigonometry, precalculus, or calculus); however, as in 1998 and 2000, there was no measurable difference between the percentage of female and male graduates who completed calculus-level coursework (see supplemental table SA-8).

## High School Coursetaking

Continued

## A Special Look: Dropouts and Course Credit Accrual

This special analysis so far has focused on coursetaking for high school graduates, or more precisely, students who graduate high school within 4 years of starting. Although some students are still enrolled in high school after their classmates have graduated, others have dropped out. It is important to understand how the coursetaking patterns of students who eventually drop out compare with those of students who receive a high school diploma. A lack of credit accrualcredits earned per year-early in high school has been shown to be one of the better predictors for subsequent dropping out (Allensworth and Easton 2005). Students may not accrue the expected number of credits because they earn a failing grade or attempt too few credits.

This special look considers the extent to which there are differences by 10th grade in the credit accrual for students who eventually drop out compared with students who graduate on time. ${ }^{13}$ Table 2 shows the credit accrual (in Carnegie units) by 2002, their sophomore year, for dropouts and "on-time graduates" (Hampden-

Thompson et al. 2007). Some students drop out before 10th grade; their counts are not reflected here, nor are those of students who attain an alternative credential (e.g., GED), or who are still in school after 2004.

Students who eventually dropped out were behind their peers who graduated on time in the total number of credits they accrued in the 2000-01 and 2001-02 academic years (9th and 10th grades, respectively, for on-time graduates) as well as the amount they accrued in their English, mathematics, and science courses in both academic years. In the 2000-01 academic year, students who would eventually drop out after the 10th grade earned an average of 5.1 credits, while those who graduated on time in 2004 earned an average of 6.6 credits. Year-to-year change shows that credit accrual declined for dropouts, putting them further behind. While ontime graduates accrued 6.6 and 6.7 credits in the 2000-01 and 2001-02 academic years, dropouts earned even fewer credits in 2001-02 (4.6) than they did in the previous academic year (5.1).

Table 2. Average course credit accrual of spring 2002 10th-graders, by academic year, subject, and high school status: 2004

| Status in 2004 | Academic year (AY) |  |  | Subject (AY 2000-02) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2000-01 | 2001-02 | Total | English | Mathematics | Science |
| Dropouts | 5.1 | 4.6 | 9.7 | 1.7 | 1.3 | 1.2 |
| On-time graduates ${ }^{1}$ | 6.6 | 6.7 | 13.3 | 2.1 | 2.0 | 1.8 |

${ }^{1}$ "On-time graduates" are students who graduated high school within 4 years between the fall of 2003 and the summer of 2004.
NOTE:The basic unit of coursework measurement is the course credit. Course credits refer to standardized Carnegie units. SOURCE:Hampden-Thompson, G., Kienzl, G., Daniel, B., and Kinukawa, A. (2007). Course Credit Accrual and Dropping Out of High School (NCES 2007-018), tables 1 and 2.

## High School Coursetaking

Figure 4. Percentage of high school graduates who completed middle and advanced levels of science courses, by highest level of coursework completed: Selected years, 1982-2004

NOTE:Not displayed are the percentages of graduates who completed lower academic science courses. The distribution of graduates in the various levels of science courses was determined by the level of the most academically advanced course they had completed. Graduates may have completed advanced levels of courses without having taken courses at lower levels. See supplemental note 12 for more details on these levels. Detail may not sum to totals because of rounding.

## High School Coursetaking

## Continued

Asian/Pacific Islander graduates were more likely than graduates of any other race/ethnicity in 1998, 2000, and 2004 to have completed advanced science and mathematics courses (1998 and 2000 data not shown) (see supplemental tables SA-7 and SA-8). For example, 33 percent of Asians/Pacific Islanders completed a calculus-level course, compared with 16 percent of Whites, 7 percent of Hispanics, 6 percent of American Indians, and 5 percent of Blacks. Following Asians/Pacific Islanders, Whites were more likely than Blacks, Hispanics, and American Indians to have completed advanced science and mathematics courses in each of these 3 years.

In 1998, 2000, and 2004, private school graduates were also more likely than public school graduates to have completed advanced courses in science and mathematics. For example, in 2004, a greater percentage of private school graduates than public school graduates completed at least one advanced course in science ( 85 vs. 67 percent) and a calculus-level course ( 25 vs. 13 percent).

## English and Foreign Language

Since the early 1980s, the percentage of high school graduates completing honors English and advanced foreign language courses has also increased (see figures 6 and 7 and supplemental tables SA-9 and SA-10). In 1982, about 13 percent of high school graduates had completed some advanced English coursework classified as "honors"; by 2004, this percentage had risen to 33 percent. Moreover, during this period, the percentage who had completed 75-100 percent of their English courses at the honors level increased from 4 to 16 percent.

The percentage of high school graduates who had completed advanced foreign language study (i.e., year 3 or higher of a foreign language) was greater in 2004 than in 1982. In 1982, about 15 percent of graduates had completed some advanced foreign language study; by 2004, this percentage had more than doubled to 35 percent. In addition, over this period, the percentage of graduates who had not completed any foreign language study decreased markedly (from 46 to 15 percent).

As was the case in 1998 and 2000 (data not shown), in 2004, female graduates were more likely than male graduates to have completed advanced English and foreign language study (see supplemental tables SA-11 and SA-12). In 1998 and 2000 (data not shown), no racial/ ethnic group of graduates completed advanced courses in English or foreign language study at higher rates than those for all other racial/ethnic groups. However, in 2004, Asian/Pacific Islanders completed advanced courses in English and in advanced foreign language study at higher rates than those for all other racial/ethnic groups. In all 3 years, Black graduates were less likely than Asian/Pacific Islander, Hispanic, and White graduates to have completed advanced foreign language courses.

In 1998, 2000, and 2004, private school graduates were also more likely than public school graduates to have completed advanced courses in foreign language study; however, apparent differences in the rates at which they completed advanced English courses were not significant (1998 and 2000 data not shown).

## High School Coursetaking

Figure 6. Percentage of high school graduates who completed regular and advanced levels of English, by highest course completed: Selected years, 1982-2004

NOTE: For each graduate, the percentages of completed English courses classified as "below level," "at grade level,"" and "honors" were calculated. Graduates may have completed advanced levels of courses without having taken courses at lower levels. See supplemental note 12 for more details on these levels. Detail may not sum to totals because of rounding.

## High School Coursetaking

Continued

## A Special Look: Advanced Placement (AP) Examinations

Advanced Placement (AP) courses provide students with the opportunity to take col-lege-level courses while in high school. The AP program offers 37 courses in 20 subjects that are developed by The College Board. A qualifying score of 3.0 or better (using a 5.0 point scale) on a course examination may enable a student to earn college credit or advanced standing in the subject area in which the course/exam was taken. Between 1997 and 2005, the number of students taking AP examinations increased 111 percent (from 566,720 to $1,197,439$ ) (see table 3). ${ }^{14}$ Over this period, the participation of White students increased 105 percent, compared with 213 percent for Hispanic students, 177 percent for Black students, 124 percent for American Indian students, and 114 percent for Asian students. As a result, the participation of minority groups increased from 27 percent of all students taking AP examinations in 1997 to 33 percent in 2005. Conversely, the percentage of White students taking AP examinations declined from 66 percent in 1997 to 64 percent in 2005.

While the number of students and the percentage of minorities participating in AP examinations have increased each year, the annual average scores have remained about 3.0, out of a possible 5.0 (see supplemental table SA-13). The examination scores of White and Asian students have remained relatively constant across all subjects, averaging about 3.0 and 3.1,respectively, while the scores of students in other racial/ethnic groups have declined. For example, the average scores of Hispanic students declined across all examination subjects, from 3.1 in 1997 to 2.5 in 2005.

The percentage of examinations resulting in a qualifying score of 3.0 or better decreased from a high of 65 percent in 1997 to a low of 59 percent in 2005 (see supplemental table SA-14). At the same time, the number of examinations with a score of at least a 3.0 increased 111 percent (from 579,865 to $1,225,845$ ) (see figure 8 ). However, the number of examinations with a score of 1.0 or 2.0 increased 163 percent (from 319,598 to 839,200 ).

Table 3. Number and percent change of students taking Advanced Placement (AP) examinations, by race/ethnicity: 1997-2005

|  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Race/ethnicity | 1997 | 1998 | $\mathbf{1 9 9 9}$ | $\mathbf{2 0 0 0}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | Percent <br> change <br> 1997 |  |  |
| to |  |  |  |  |  |  |  |  |  |  |  |

${ }^{1}$ Total includes other race/ethnicity categories not separately shown.

NOTE:Data reported are for all students who completed an AP exam. The College Board collects racial/ethnic information based on the categories American Indian/Alaska Native;Asian/Asian American;Black/Afro-American;Latino:Chicano/Mexican,Puerto Rican,Other Latino;White;and Other. Hispanic refers to the sum of all Latino subgroups. Race categories exclude persons of Hispanic ethnicity. SOURCE:The College Board, Advanced Placement Program. (1997-2005). National Summary Reports.

## Summary

With requirements for earning a high school diploma becoming more rigorous over the past 20 years, there have been increases in the rates at which students accrue course credits. For example, between 1982 and 2004, the average number of course credits accrued by high school graduates increased from 21.7 to 25.8 credits.

This growth in the number of credits earned has been accompanied by an increase in the advanced coursework completed by high school students. More students are now taking advanced courses in mathematics and science-in particular calculus, chemistry I, and physics I-and in English and foreign languages. Further evidence of the prevalence of advanced coursetaking is an increase in the percentage of students who take AP examinations: between 1997 and 2005, the total number of students taking AP examinations more than doubled. As the number of participants in AP courses
has increased, average scores have remained relatively stable; however, there has been a decrease in the percentage of examinations resulting in a qualifying score of 3.0 or more, from 65 to 59 percent. At the same time that academic coursetaking has been rising, there has not been an improvement in 12th-grade NAEP scores (Shettle et al. 2007).

Gaps in advanced coursetaking by sex and race/ethnicity are evident in mathematics, science, English, and foreign language study. Most notably, since 1998, females have been more likely than males to complete some advanced science coursework, though no differences by sex were detected in the proportions of students who took the highest levels of science or mathematics coursework. In addition, in 2004, Asian graduates were more likely than graduates of any other race/ethnicity to complete advanced courses in mathematics, science, English, and foreign language study.

## High School Coursetaking

## Continued

## Notes

${ }^{1}$ The most recent data available for this special analysis did not collect data on advanced course offerings from private schools.
${ }^{2}$ The basic unit of coursework measurement is the course credit or standardized "Carnegie unit." $A$ Carnegie unit is a standard of measurement used for secondary education that is equivalent to the completion of a course that meets one period per day for one school year, where a period is typically at least 40 minutes.
${ }^{3}$ Many local school districts and schools impose their own standards for graduation that exceed these state requirements.
${ }^{4}$ In 2006, nine states had exit examination requirements for some private school students. In several states, these requirements applied to all students in state-accredited private schools;however, in other states, these requirements applied only to specific categories of private school students (e.g., students placed in private schools by schoo districts or other public agencies) (CEP 2006, table 22).
${ }^{5}$ Maryland's exit examination process was revised in 2004.
${ }^{6}$ North Carolina also has a mandatory test in civics and economics and in computer skills.
${ }^{7}$ Information on the content of the dual-credit coursework, and the extent to which it qualifies as advanced, was not collected as part of the Fast Response Survey System (FRSS).
${ }^{8}$ All high school courses recorded in student transcripts are coded in accordance with the Classification Scheme of Secondary School Courses (CSSC). Courses in the CSSC taxonomy can then be grouped according to their academic level to classify a student's highest level of coursetaking within a particular subject. The CSSC is designed to describe course offerings in secondary education and to provide a coherent means for classifying these courses in this way. Each CSSC code has six digits, with an associated course title, alternate titles, and a course description
${ }^{9}$ The definition of a high school graduate and what was considered a complete transcript record differs slightly between survey collections and other NCES reports. See supplemental note 12 for more detail.
${ }^{10}$ These data report only the percentage of students who earned credit in each course while in high school and do not include a count of those courses taken prior to entering high school. In 2004,approximately 95 percent of graduates had taken algebra I before or during high school.
${ }^{11}$ Academic levels are labeled according to the most commonly known course at that level; courses with different names or on topics of different but similar academic difficulty may be included under these rubrics. See supplemental note 12 for a complete listing of all the courses classified at each academic level.
${ }^{12}$ Calculus-level courses include AP calculus, calculus, and calculus/analytical geometry.
${ }^{13}$ " 0 n-time" graduates are students who graduated between the fall of 2003 and the summer of 2004.
${ }^{14}$ The focus in the section is on students and examinations. Individuals may take multiple examinations. Furthermore, the data for this section's analysis count all test takers and are not limited to high school graduates.

# Introduction: Participation in Education 

The indicators in this section of The Condition of Education report trends in enrollments across all levels of education. There are 14 indicators in this section: 10, prepared for this year's volume, appear on the following pages, and all 14 , including indicators from previous years, appear on the Web (see Website Contents on the facing page for a full list of the indicators). Enrollment is a key indicator of the scope of and access to educational opportunities and a basic descriptor of American education. Changes in enrollment have implications for the demand for educational resources, such as qualified teachers, physical facilities, and funding levels required to provide a high-quality education for our nation's students.

The indicators in this section are organized into an overview section, in which enrollment rates are reported by age groups, and a series of subsections organized by level of the education system. These levels are preprimary education, elementary and secondary education, undergraduate education, graduate and professional education, and adult education.

The indicator in the first subsection compares rates of enrollment in formal education programs across age groups in the population. Looking at trends in the enrollment rates of individuals provides a perspective on the engagement in education of the U.S. population at different points in the life cycle and over time.

Participation in center-based early childhood care and education programs, such as Head Start, nursery school, and prekindergarten, helps to prepare children for elementary school or serves as child care for working parents. Elementary and secondary education provides knowledge and skills that prepare students for further learning and productive member-
ship in society. Because enrollment at the elementary and secondary levels is mandatory in most states until at least age 16 , and in a number of states it is either 17 or 18 , changes in enrollment are driven primarily by shifts in the size and composition of the school-age population, as well as by shifts in the type of schooling students attend, such as private schools and homeschooling. Postsecondary education provides students with opportunities to gain advanced knowledge and skills either immediately after high school or later in life. Because postsecondary education is voluntary, changes in total undergraduate enrollments reflect fluctuations in enrollment rates and the perceived availability and value of postsecondary education, as well as the size of collegeage populations. Graduate and professional enrollments form an important segment of postsecondary education, allowing students to pursue advanced coursework in a variety of areas. Adult education includes formal education activities in which adults participate to upgrade their work-related skills, to change careers, or to expand personal interests.

Some of the indicators in the subsections provide information about the background characteristics of the students who are enrolled and, in some cases, how these students are distributed across schools. For example, one indicator that appears in this volume shows the number and prevalence of children with disabilities, and a second indicator shows the racial and ethnic distribution of elementary and secondary public school students.

The indicators on participation in education from previous editions of The Condition of Education, which are not included in this volume, are available at http://nces.ed.gov/programs/ coe/list/index.asp.

## All Ages <br> Enrollment Trends by Age

Between 1970 and 2005, enrollment rates increased among those between ages 18 and 34, the period when individuals typically enroll in postsecondary education. For those ages 18-19, the enrollment rate increased from 48 to 68 percent.

Changes in the number of students enrolled can stem from fluctuations in population size or shifts in enrollment rates. This indicator examines the enrollment rates of individuals ages 3-34 to identify changes in enrollment behavior, which may reflect changes in attendance requirements, the perceived value or cost of education, or the time taken to complete degrees.

Between 1970 and 2005, the enrollment rate of children ages 3-4 (the typical preschool ages) increased from 20 to 54 percent. While some of this increase may reflect changes in the data collection method in 1994, ${ }^{1}$ the rate of preschool attendance had already doubled before then (see supplemental table 1-1). The enrollment rate of children ages 5-6 (the typical kindergarten ${ }^{2}$ or 1stgrade ages) increased from 90 percent in 1970 to 96 percent in 1977 and has since remained roughly level. Because state law requires youth ages 7-13 to enroll in elementary or secondary education, their enrollment rate has been very high (between 98 and 99 percent) over the past 35 years. The maximum compulsory age of school attendance varies by state between ages 16 and 18; that may be reflected in the lower enrollment rates for 14 - to

17-year-olds (between 93 and 97 percent) compared with those for 7 - to 13 -year-olds (Education Commission of the States 2005b).

Youth ages 18-19 are typically transitioning into postsecondary education or the workforce. Between 1970 and 2005, the enrollment rate for these youth increased at the elementary/secondary level (from 10 to 18 percent) and at the postsecondary level (from 37 to 49 percent), raising the overall rate of 18 - to 19 -year-olds from 48 to 68 percent. This overall rate for 2005 is up from 61 percent of students in this age group in 2000.

Adults ages 20-34 who are enrolled in school are usually enrolled in postsecondary education. Between 1970 and 2005, the enrollment rate of young adults, ages 20-24, increased from 22 to 36 percent, up from 32 percent in 2000 . Within this age group, the enrollment rate of those ages 20-21 increased from 32 to 49 percent, and the enrollment rate of those ages 22-24 increased from 15 to 27 percent. Among the older age groups, the enrollment rate increased from 8 to 12 percent for those ages 25-29 and from 4 to 7 percent for those ages 30-34 during this period.

ENROLLMENT RATES: Percentage of the population ages 3-34 enrolled in school, by age group: October 1970-2005

${ }^{1}$ Beginning in 1994, new procedures were used to collect preprimary enrollment data. As a result, data from before 1994 may not be comparable to data from 1994 or later.
${ }^{2}$ As of April 2005, there were 36 states or jurisdictions that did not require kindergarten attendance; however, most mandate that school districts offer kindergarten programs (Education Commission of the States 2005a).
NOTE: Includes enrollment in any type of public or private school, nursery school, kindergarten, elementary school, high school, college, university, and professional school. Attendance may be on either a full-time or part-time basis and during the day or night. Excludes homeschooled students and enrollment in less-than-2-year postsecondary institutions.See supplemental note 2 for more information on the Current Population Survey (CPS).

Education Commission of the
States 2005a, 2005b <br> \title{
Preprimary Education <br> \title{
Preprimary Education <br> Enrollment in Early Childhood Education Programs
}

The percentage of children ages 3-5 who attended center-based early childhood care
and education programs rose from 53 percent in 1991 to 60 percent in 1999 and then decreased to 57 percent in 2005.

NOTE: Estimates are based on children who have not yet entered kindergarten. Poor is defined to include families below the poverty threshold; nonpoor is defined to include families whose incomes are at or above the poverty threshold. See supplemental note 1 for more information on poverty.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Early Childhood Education Survey of the 1991 National Household Education Surveys Program (NHES),School Readiness Survey of the 1993 NHES, Parent and Family Involvement in Education/Civic Involvement Survey of the 1996 NHES, Parent Survey of the 1999 NHES, and Early Childhood Program Participation Survey of the 1995, 2001, and 2005 NHES.

FOR MORE INFORMATION:
Supplemental Notes 1,3
Supplemental Table 2-1
NCES 2006-039

Center-based early childhood care and education programs include day care centers, Head Start programs, preschool, nursery school, prekindergarten, and other early childhood programs. The percentage of preprimary children ages 3-5 who attended center-based programs increased from 53 percent in 1991 to 60 percent in 1999, before decreasing to 57 percent in 2005 (see supplemental table 2-1).

Some groups of young children had higher rates of participation in center-based programs than others during this period. For example, in each of the years observed, a greater percentage of nonpoor children ages $3-5$ participated in cen-ter-based programs than did poor children. The difference in rates of participation between children from poor and nonpoor families was 13 percentage points in 2005 ( 47 vs. 60 percent).

In addition, for all years observed, a greater percentage of Black and White children than Hispanic children participated in center-based programs. In 2005, some 66 percent of Black children and 59 percent of White children participated in such programs, compared with 43
percent of Hispanic children. White and Hispanic nonpoor children were more likely than their poor peers to participate in center-based programs in 2005, while no measurable difference was found between poor and nonpoor Black children.

Differences were also found by child's age, mother's education, and mother's employment for all years observed. Enrollment rates in center-based programs were higher for older children (ages 4 and 5) than for children age 3. Sixty-nine percent of children ages 4 and 5 attended such programs, compared with 43 percent of children age 3 . For all years observed, a greater percentage of children whose mothers had a bachelor's or higher degree participated in center-based programs than did children whose mothers had some college, a high school diploma, or less than a high school diploma. For all years observed, a greater percentage of children with mothers who worked (either full time or part time) were enrolled in center-based programs than were children with mothers who were not in the labor force.

PREPRIMARY ENROLLMENT:Percentage of preprimary children ages $3-5$ who were enrolled in center-based early childhood care and education programs, by poverty status:Various years, 1991-2005

# Elementary/Secondary Education Past and Projected Public School Enrollments 

## Public elementary and secondary enrollment is projected to increase to 53 million in 2016. The South is projected to experience the largest increase in enrollment.

In $2007,{ }^{1}$ about 50 million students are expected to be enrolled in public schools. Of these students, 34.6 million will be enrolled in prekindergarten (preK) through 8th grade and 15.0 million will be enrolled in grades 9 through 12 .

After declining during the 1970s and early 1980s to 39.4 million in 1985, public school enrollment in grades preK-12 increased in the latter part of the 1980s, throughout the 1990s, and through the early 2000 s, and is projected to reach an estimated 49.6 million in 2007 (see supplemental table 3-1). Total public school enrollment is projected to set new enrollment records each year from 2007 through 2016 ( 53.3 million).

Enrollment trends in grades preK-8 and 9-12 have differed over time as students move through the public school system. For example, enrollment in grades preK-8 decreased throughout the 1970s and early 1980s, while enrollment in grades 9-12 decreased in the late 1970s and throughout the 1980s. Public school enrollment in grades preK -8 is projected to increase to 34.6
million in 2007 and to reach 37.9 million in 2016. Enrollment in grades $9-12$ is projected to increase to 15.0 million in 2007 and to decrease through 2011 before increasing to a high of 15.4 million in 2016.

Since 1965 the southern region has had the largest share of public enrollment in the United States. The regional distribution of students in public schools, however, has not remained static. In 1965, the proportion of public elementary and secondary enrollment in the South was 33 percent and is projected to increase to 37 percent in 2007 . While the share of enrollment in the West was 18 percent in 1965, it is projected to increase to 24 percent in 2007. In contrast, the share of enrollment in the Midwest was 28 percent in 1965 and is projected to decrease to 22 percent in 2007 . The share of national enrollment in the Northeast was 21 percent in 1965 and is projected to decrease to 17 percent in 2007. Between 2008 and 2016, the share of public school enrollment in grades preK-12 is projected to decrease slightly in the Northeast and Midwest, increase in the South, and remain steady in the West.

SCHOOL ENROLLMENT: Public school enrollment in prekindergarten through grade 12, by grade level, with projections:
Various years, fall 1965-2016

All estimates are from the fall of the referenced year.
NOTE:Includes kindergarten and most prekindergarten enrollment. Data for years 2000,2003, and 2004 were revised and may differ from previously published figures.

# Elementary/Secondary Education 

 Trends in Private School Enrollments
#### Abstract

The number of private school students enrolled in kindergarten through grade 12 increased from 1989-90 through 2001-02 and then declined in 2003-04, while the percentage enrolled in private schools remained near 10 percent.

Other religious schools have a religious orientation or purpose, but are not Roman Catholic. Conservative Christian schools are those with membership in at least one of four associa-tions-Accelerated Christian Education, American Association of Christian Schools, Association of Christian Schools International, or Oral Roberts University Education Fellowship.Affliated schools are those with membership in one of 12 asso-ciations-Association of Christian Teachers and Schools, Christian Schools International, Council of Islamic Schools in North America, Evangelical Lutheran Education Association, Friends Council on Education, General Conference of the SeventhDay Adventist Church, Islamic School League of America, National Association of Episcopal Schools, National Christian School Association, National Society for Hebrew Day Schools,Solomon Schechter Day Schools,Southern Baptist Association of Christian Schools—or indicating membership in "other religious school associations." Unaffiliated schools are those that have a religious orientation or purpose, but are not classified as Conservative Christian or affiliated.
${ }^{2}$ Nonsectarian schools do not have a religious orientation or purpose.

NOTE: Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Private School Universe Survey (PSS), 1989-90 and 2003-04.

FOR MORE INFORMATION:
Supplemental Notes 1,3
Supplemental Tables 4-1, 4-2,4-3
NCES 2006-319

Between 1989-90 and 2001-02, private school enrollment in kindergarten through grade 12 increased from 4.8 million to 5.3 million students. By 2003-04, enrollment had declined to 5.1 million students (see supplemental table 4-1).

The distribution of students across different types of private schools also changed between 1989-90 and 2003-04. Although Roman Catholic schools continue to have the largest share of total private school enrollment, the percentage decreased from 55 to 46 percent because of the decline in the percentage of students enrolled in parochial schools (i.e., run by a parish, not by a diocese or independently). On the other hand, the percentage of students enrolled in Conservative Christian schools increased from 11 to 15 percent. In addition, there was an increase in the percentage of students enrolled in nonsectarian private schools, from 13 to 18 percent. This change in distribution from Roman Catholic to other religious and nonsectarian private schools occurred at both the elementary and secondary levels.

Overall, while the number of students enrolled in private schools was higher in 2003-04 than
in 1989-90, the percentage of all students attending private schools remained around 10 percent (see supplemental table 4-2). Private school students as a percentage of all students differed by region of the country. In 2003-04, private school enrollment accounted for 13 percent of the total Northeast enrollment, higher than the percentage for the Midwest (11 percent), the South (9 percent), and the West (8 percent).

The student composition of private schools differed from that of public schools and varied, among private schools, by community type. In 2003-04, a greater proportion of students enrolled in private schools than in public schools were White ( 76 vs. 58 percent), and a smaller proportion were Black ( 9 vs. 16 percent) and Hispanic (9 vs. 19 percent) (see supplemental table 4-3 and indicator 5). In addition, the distribution of students in private schools differed by community type. Within central cities, 31 percent of private school students enrolled were minority students, compared with 20 percent within urban fringe/large towns and 11 percent within rural communities.

PRIVATE SCHOOL ENROLLMENT: Percentage distribution of private school students in kindergarten through grade 12, by school type: 1989-90 and 2003-04

# Elementary/Secondary Education Racial/Ethnic Distribution of Public School Students 

The percentage of racial/ethnic minority students enrolled in the nation's public schools increased between 1972 and 2005, primarily due to growth in Hispanic enrollments.

The shifting racial and ethnic composition of enrollment in U.S. public schools is one aspect of change in the composition of school enrollment. This indicator looks at the changes that occurred in the racial and ethnic distribution of public school students in kindergarten through 12th grade between 1972 and 2005.

Forty-two percent of public school students were considered to be part of a racial or ethnic minority group in 2005, an increase from 22 percent of students in 1972 (see supplemental table 5-1). In comparison, the percentage of public school students who were White decreased from 78 to 58 percent. The minority increase largely reflected the growth in the proportion of students who were Hispanic. In 2005, Hispanic students represented 20 percent of public school enrollment, up from 6 percent in 1972. The proportion of public school students who were Hispanic increased more than the proportion of students who were Black or who were members of other minority groups. For example, in 2005, Black students made up 16 percent of public school enrollment compared with 15 percent in 1972. Hispanic enrollment measurably surpassed Black enrollment for the first time in 2002. Together,

Asian (4 percent), Pacific Islander ( 0.2 percent), and American Indian/Alaska Native ( 0.7 percent) students and students of more than one race (3 percent) made up 7 percent of public school enrollment in 2005, compared with 1 percent combined in 1972.

The distribution of minority students in public schools differed by region, though minority enrollment generally grew in all regions between 1972 and 2005 (see supplemental table 5-2). Throughout this period, the South and West had larger minority enrollments than the Northeast and Midwest, and the Midwest had the smallest minority enrollment of any region. In the West, beginning in 2003, minority enrollment exceeded White enrollment. In 2005, minority students accounted for 54 percent of public school enrollment in the West, compared with 46 percent for White students. In 2005, as in most years since 1972, the number of Hispanic students exceeded the number of Black students in the West. In the South and Midwest, however, Black enrollment continued to exceed that of Hispanics. In 2005, students of more than one race were a larger percentage of total public school enrollment in the West than in any other region.

## \# Rounds to zero.

${ }^{1}$ In 1972,"Other"includes all students who did not identify themselves as White, Black, or Hispanic. In 2005, "Other" includes Asian students, Pacific Islander students,American Indian/Alaska Native students, and students of more than one race.
NOTE:Race categories exclude persons of Hispanic ethnicity. Figures include all public school students enrolled in kindergarten through 12th grade. See supplemental note 2 for more information on the Current Population Survey.Detail may not sum to totals because of rounding.

Supplemental Notes 1,2
Supplemental Tables 5-1,5-2

# Elementary/Secondary Education Language Minority School-Age Children 

The number of children ages 5-17 who spoke a language other than English at home more than doubled between 1979 and 2005.
${ }^{1}$ An Indo-European language other than Spanish (e.g., French, German, Portuguese, etc.)
${ }^{2}$ Any native language spoken by Asians or Pacific Islanders, which linguists classify variously as Sino-Tibetan, Austroasiatic, or Austronesian languages.
NOTE: Respondents were asked if each child in the household spoke a language other than English at home. If they answered "yes," they were asked how well each child could speak English. Categories used for reporting were"very well,"'"well,""not well,"and"not at all."All those who reported speaking English less than "very well"were considered to have difficulty speaking English.In 1994, the survey methodology for the Current Population Survey (CPS) was changed and weights were adjusted. Spanish-language versions of both the CPS and the American Community Survey (ACS) were available to respondents. Poor is defined to include families below the poverty threshold, near-poor is defined to include families at 100-199 percent of the poverty threshold, and nonpoor is defined to include families at 200 percent or more than the poverty threshold. Race categories exclude persons of Hispanic ethnicity.
SOURCE:U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), 1979 and 1989 November Supplement and 1992, 1995, and 1999 October Supplement, and American Community Survey (ACS), 2000-05.

FOR MORE INFORMATION:
Supplemental Notes 1,2,3
Supplemental Tables 6-1,6-2 NCES 2004-009

Federal Interagency Forum on Child and Family Statistics 2005

Between 1979 and 2005, the number of schoolage children (ages 5-17) who spoke a language other than English at home increased from 3.8 million to 10.6 million, or from 9 to 20 percent of the population in this age range (see supplemental table 6-1). An increase is also evident during the more recent period of 2000 to 2005 ( 18 to 20 percent). Among school-age children who spoke a language other than English at home, the total number of children who spoke English with difficulty increased from 1.3 million (or 3 percent of all 5 - to 17 -year-olds) to 2.9 million (or 6 percent) between 1979 and 2000, and did not measurably change from 2000 to 2005 . However, these children have continued to decrease over time as a proportion of those who spoke another language at home, from 34 percent in 1979 to 31 percent in 2000 to 27 percent in 2005.

In 2005, the majority of school-age children who spoke a language other than English at home spoke Spanish (see supplemental table 6-2). The next largest number of children speaking a language other than English at home spoke other Indo-European ${ }^{1}$ languages, followed by Asian/Pacific Islander ${ }^{2}$ languages and then
other languages. Those who spoke Spanish or an Asian/Pacific Islander language at home were more likely to speak English with difficulty (28 percent for both) than were those who spoke other Indo-European languages ( 21 percent) or other languages at home (19 percent).

The percentages of school-age children who spoke a non-English language at home varied by race/ethnicity, citizenship, and poverty status in 2005. Among school-age children, relatively more Hispanic children spoke a language other than English at home ( 69 percent), followed by Asians (64 percent), then Pacific Islanders (31 percent), American Indians/Alaska Natives (17 percent), persons of more than one race ( 9 percent), Whites ( 6 percent), and Blacks ( 5 percent). The percentage of non-U.S. citizens who spoke a language other than English at home (90 percent) was higher than the percentages of naturalized U.S. citizens ( 64 percent) and U.S.-born citizens (16 percent) who did so. Higher percentages of poor (30 percent) and near-poor ( 29 percent) 5 - to 17-year-olds spoke a non-English language at home than did nonpoor 5 - to 17 -year-olds (14 percent).

# Elementary/Secondary Education Children With Disabilities in Public Schools 

The number and percentage of youth receiving special education services have increased nearly every year since 1976-77. From 1976-77 through 2005-06, the percentage receiving services for a specific learning disability increased threefold.

The Individuals with Disabilities Education Act (IDEA), first enacted in 1975, mandates that youth with disabilities are provided a free and appropriate public school education. Data collection activities to monitor compliance with IDEA began in 1976.

Since the inception of IDEA, the number and percentage of youth ages 3-21 enrolled in public schools receiving special education services have increased nearly every year (see supplemental table 7-1). In 1976-77, some 3.7 million youth were served under IDEA, and these youth made up 8 percent of total public school enrollment. By 2005-06, some 6.7 million youth received IDEA services, corresponding to 14 percent of total public school enrollment. Among these students served under IDEA in 2004-05, about 1 percent were American Indian/Alaska Native, 2 percent were Asian/Pacific Islander, 20 percent were Black, 16 percent were Hispanic, and 60 percent were White (U.S. Department of Education 2006). ${ }^{1}$

Among youth ages $3-21$, specific learning disabilities were the most prevalent disability and had the largest increase in percentage of the population served (see supplemental table 7-2). Specific learning disabilities involve one or more of the basic psychological processes involved in understanding or in using language, spoken or written, that may manifest itself in an imperfect ability to listen, think, speak, read, write, spell, or to do mathematical calculations, including conditions such as perceptual disabilities, brain injury, minimal brain dysfunction, dyslexia, and developmental aphasia. From 1976-77 through 2005-06, the percentage of youth 3-21 receiving special education services for a specific learning disability increased threefold (from 2 to 6 percent of enrolled youth). In comparison, the prevalence of speech or language impairments remained fairly constant with variations of less than 1 percentage point between 1976 and 2005.

${ }^{1}$ Data presented in source document only. Detailed enrollment data by race/ethnicity are not yet available beyond 2004-05. Race categories exclude persons of Hispanic ethnicity.
${ }^{2}$ A disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, that may manifest itself in an imperfect ability to listen, think, speak, read, write, spell, or to do mathematical calculations, including conditions such as perceptual disabilities, brain injury, minimal brain dysfunction, dyslexia, and developmental aphasia.
${ }^{3}$ Other disability types include mental retardation, emotional disturbance, hearing impairments, orthopedic impairments, other health impairments, visual impairments, multiple disabilities, deaf-blindness, autism, traumatic brain injury, and developmental delay. Note the nature of disabilities within this category are diverse;they are included together here to represent cases contributing to the total not otherwise presented in this graph due to relatively low prevalence in the population.
NOTE: Special education services through the Individuals with Disabilities Education Act (IDEA) are available for eligible youth identified by a team of qualified professionals as having a disability that adversely affects their academic performance and as in need of special education and related services. The total is the percentage of youth receiving special education services through IDEA in early education centers and public schools in the 50 states and the District of Columbia and in Bureau of Indian Affairs (BIA) schools through 1993-94. Beginning in 1994-95, enrollment numbers and percentages exclude BIA schools. See supplemental note 8 for more information about the student disabilities presented here.

Education 2006c

# Undergraduate Education <br> Past and Projected Undergraduate Enrollments 

Women are projected to make up 60 percent of undergraduate enrollment in 2016.

NOTE:Projections are based on data through 2005 and middle alternative assumptions concerning the economy. For more information, see NCES 2007-038. See supplemental note 3 for more information on the Integrated Postsecondary Education Data System (IPEDS).See supplemental note 9 for more information about the classification of postsecondary education institutions.
SOURCE: U.S. Department of Education, National Center for Education Statistics (NCES). Digest of Education Statistics, 2006 (NCES 2007-017), table 190, and Hussar, W. (forthcoming). Projections of Education Statistics to 2016 (NCES 2007-038), table 19;data from U.S.Department of Education, NCES, 1970-1985 Higher Education General Information Survey (HEGIS),"Fall Enrollment in Colleges and Universities" surveys; and 1986-2005 Integrated Postsecondary Education Data System, "Fall Enrollment Survey" (IPEDS-EF:86-99), and Spring 2001 through Spring 2006.

FOR MORE INFORMATION:
Supplemental Notes 3,9
Supplemental Table 8-1

Total undergraduate enrollment in degree-granting postsecondary institutions has generally increased over the past three and a half decades. Enrollments are projected to continue increasing through 2016, albeit at a slower rate than from 1995 to 2005. These increases have been accompanied by changes in the proportions of students who are female, students who attend full time, and students who attend 4 -year institutions (see supplemental table 8-1). The number of students enrolled part time and full time, the number of students at 2-and 4 -year institutions, and the number of male and female undergraduates are all projected to reach a new high each year from 2006 through 2016.

Since 1970, women's undergraduate enrollment increased more than three times as fast as men's and surpassed men's enrollment in 1978. Women made up 42 percent of undergraduate enrollment in 1970, some 50 percent in 1977, and 57 percent in 2005. From 2006 to 2016, both men's and women's undergraduate enrollments are projected to increase, but less than they did from 1995 to 2005. Women's undergraduate enrollment is projected to continue growing faster than men's enrollment, and women are projected to make up 60 percent of enrollment in 2016.

Undergraduate students are more likely to be enrolled full time than part time, a pattern that is expected to continue. In the 1970s, part-time undergraduate enrollment increased more than five times as fast as full-time undergraduate enrollment. During the 1980s, growth slowed for both groups, while from 1995 to 2005 full-time enrollment grew more than three times as fast as part-time enrollment. Full-time undergraduate enrollment is expected to continue growing more rapidly than part-time enrollment through 2016.

Over the past 36 years, undergraduate enrollment has been larger at 4-year institutions than at 2-year institutions. During this period, enrollment at 2year institutions rapidly increased in the 1970s (by 82 percent vs. 14 percent for 4 -year institutions), slowed in the 1980s and 1990s, and fluctuated from 2000 through 2005. Aside from a slowing in the early 1990s, enrollment has grown fairly steadily at 4 -year institutions since 1970. Between 2006 and 2016, enrollment at 4 -year colleges is expected to grow more rapidly than enrollment at 2-year colleges ( 17 vs. 12 percent).

UNDERGRADUATE ENROLLMENT: Total undergraduate enrollment in degree-granting 2- and 4-year postsecondary institutions with projections, by sex: Fall 1970-2016

# Graduate and Professional Education Trends in Graduate/First-Professional Enrollments 

Enrollment in graduate and first-professional programs increased from 1976 to 2005. Female enrollment increased by a larger percentage than did male enrollment during this period for both types of programs.

Enrollment in graduate programs increased 64 percent between 1976 and 2005 (from 1.3 to 2.2 million), and 18 percent between 2000 and 2005 (see supplemental table 9-1). First-professional program enrollment increased 38 percent between 1976 and 2005 (from 244,000 to 337,000), and 10 percent between 2000 and 2005. Increases in both graduate and first-professional enrollments are projected to continue, with graduate enrollment reaching more than 2.6 million and first-professional enrollment reaching 440,000 by 2016.

Enrollment trends differ by sex in graduate and first-professional programs. More men than women attended both program types in 1976. Since then, female enrollment in graduate programs has increased 112 percent (from 619,000 to 1.3 million in 2005), while male enrollment fluctuated but increased 23 percent overall (from 714,000 to 877,000 ). In the more recent period from 2000 to 2005, female graduate enrollment increased 22 percent and male graduate enrollment increased 13 percent. Females represented 46 percent of total graduate enrollment in 1976, some 50 percent in 1984, and 60 percent in 2005. Between 1976 and 2005, female enrollment in first-professional programs increased 207 percent
(from 54,000 to 167,000 ), while male enrollment fluctuated but had an overall decrease of 11 percent (from 190,000 to 170,000). Between 2000 and 2005, first-professional enrollment increased 17 percent for females and 4 percent for males. Women are projected to have exceeded 50 percent of total first-professional enrollment for the first time in 2006.

Minorities experienced enrollment gains between 1976 and 2005. In 1976, minorities represented 10 percent of total graduate enrollment, compared with 23 percent in 2005 (see supplemental table 9-2). Minority enrollment in graduate programs increased 269 percent during this period (from 134,000 to 496,000 ), while White enrollment increased 28 percent (from 1.1 to 1.4 million). Among minorities, enrollments for Hispanics and Asians/Pacific Islanders have seen the greatest growth overall, but Blacks had the largest increase in the more recent period of 1995 to 2005. In first-professional programs, minority enrollment grew by 331 percent (from 21,000 to 91,000 ), compared with an 8 percent growth in White enrollment (from 220,000 to 238,000 ).

GRADUATE/FIRST-PROFESSIONAL ENROLLMENT:Graduate and first-professional enrollment in degree-granting institutions in 1976 and 2005 and percentage increase between the two years, by sex and race/ethnicity

| Characteristic | [Enrollment in thousands] |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Graduate enrollment |  |  | First-professional enrollment |  |  |

## Adult Learning <br> Participation in Adult Education

The percentage of the population age 16 or older participating in adult education increased from 1995 to 2001 and then declined in 2005. Work-related courses and personal interest courses were the most popular forms of adult education in 2005.

Adult education activities are formal activities including basic skills training, apprenticeships, work-related courses, personal interest courses, English as a Second Language (ESL) classes, and part-time college or university degree programs. This indicator examines the participation rates for adult education activities of individuals age 16 or older.

Overall participation in adult education among individuals age 16 or older increased from 40 percent in 1995 to 46 percent in 2001 and then declined to 44 percent in 2005 (see supplemental table 10-1). In 2005, among the various types of adult education activities, individuals age 16 or older participated most in work-related courses ( 27 percent), followed by personal interest courses (21 percent), part-time college or university degree programs ( 5 percent), and other activities (3 percent).

Participation rates varied by sex, age, race/ethnicity, employment/occupation, and education in 2005 (see supplemental table 10-2). For example, a greater percentage of females than males participated in personal interest courses ( 24 vs. 18 percent) and work-related activities ( 29 vs. 25 percent). Individuals ages 16-24 had a higher overall participation rate in adult education activities than their counterparts age 55 or older. Blacks and Whites had higher rates of overall participation in adult education than their Hispanic peers. Among those employed in the past 12 months, the overall participation rate in adult education was higher for those in a professional or managerial occupation (70 percent) than for those employed in service, sales, or support jobs ( 48 percent) or those in trade occupations ( 34 percent). In addition, the overall participation rate in adult education for individuals with a bachelor's degree or higher was greater than for those individuals who had some college or less education.
${ }^{1}$ Includes basic skills training, apprenticeships, and English as a Second Language (ESL) courses.

NOTE: Estimates exclude persons who were attending elementary or secondary school,on active duty in the U.S. Armed Forces, or institutionalized. Estimates include part-time participation in college or university degree programs and vocational or technical diploma programs. Full-time participation for all or part of the year in a degree or diploma program was not counted as an adult education activity.

This List of Indicators includes all the indicators in Section 2 that appear on The Condition of Education website (http://nces.ed.gov/programs/ (00), drawn from the 2000-2007 print volumes. The list is organized by subject area. The indicator numbers and the years in which the indicators were published are not necessarily sequential.

# Introduction: Learner Outcomes 

The indicators in this section of The Condition of Education examine student achievement and other outcomes of education among students in elementary and secondary education, and among adults in the larger society. There are 26 indicators in this section: 10, prepared for this year's volume, appear on the following pages, and all 26, including indicators from previous years, appear on the Web (see Website Contents on the facing page for a full list of the indicators). The indicators on student achievement show how students are performing on assessments in reading, mathematics, science, and other academic subject areas; trends over time in student achievement; and gaps in achievement. The indicators in this section are organized into five subsections.

The indicators in the first subsection trace the gains in achievement and specific reading and mathematics skills of children through the early years of elementary education. Children enter school with varying levels of knowledge and skill. Measures of these early childhood competencies represent important indicators of students' future prospects both inside and outside of the classroom. Two indicators available on the Web show changes in student achievement for a cohort of children who began kindergarten in fall 1998 as they progressed through 3rd grade in 2001-02.

The indicators in the second subsection report trends in student performance by age or grade in the later years of elementary education through high school. As students progress through school, it is important to know the extent to which they are acquiring necessary skills and becoming proficient in challenging subject matter. Academic outcomes are basically measured in three ways: as the change in students' average performance over time, as the
change in the percentage of students achieving predetermined levels of achievement, and through international comparisons of national averages.

Together, measures in the first two subsections, across indicators, help create a composite picture of academic achievement in U.S. schools. For example, one indicator that appears on the Web shows the overall reading and mathematics achievement of U.S. students from kindergarten through 3rd grade, while another in this volume shows the overall reading and mathematics achievement of students in grades 4 and 8.

In addition to academic achievement, there are adult literacy measures in the third subsection and culturally and socially desirable outcomes of education in the fourth subsection. These outcomes contribute to an educated, capable, and engaged citizenry, which can be gauged by adult literacy, civic knowledge, community volunteerism, and voting participation. Other measures are patterns of adult reading habits, communication and media use, and the health status of individuals.

The fifth subsection looks specifically at the economic outcomes of education. Economic outcomes refer to the likelihood of being employed, the salaries that employers are prepared to pay individuals with varying levels of skill and competence, the job and career satisfaction of employees, and other measures of economic well being and productivity.

The indicators on student achievement from previous editions of The Condition of Education that are not included in this volume are available at http://nces.ed.gov/programs/coe/ list/i2.asp.

## Academic Outcomes <br> Reading Performance of Students in Grades 4, 8, and 12

#### Abstract

National average reading scores of 4th- and 8th-graders have varied little over time, though both were 2 points higher in 2005 than in 1992. During this time, however, the reading scores of 12 th-graders declined 6 points.

The National Assessment of Educational Progress (NAEP) has assessed the reading abilities of students in grades 4,8 , and 12 in both public and private schools since 1992. Reported on a scale of $0-500$, national average reading scores of 4thand 8th-graders varied little between 1992 and 2005, though both were 2 points higher in 2005 than in 1992 (see supplemental table 11-1). The reading scores of 12 th-grade students, however, decreased 6 points during this period.

Achievement levels (Basic, Proficient, and Advanced) identify what students should know and be able to do at each grade. The percentage of 4th-graders performing at or above Basic (indicating partial mastery of fundamental skills) in 2005 (64 percent) was not measurably different from the percentage in 1992; however, the percentage performing at or above Proficient (indicating solid academic achievement) increased from 29 to 31 percent during this time. Between 1992 and 2005, the percentage of 8th-graders performing at or above Basic increased from 69 to 73 percent, while the percentage performing at or above Proficient in 2005 ( 31 percent) was not measurably different from the percentage in 1992. The percentage of 12th-graders performing at or above Basic de-
creased from 80 to 73 percent, and the percentage performing at or above Proficient decreased from 40 to 35 percent between 1992 and 2005.

Reading results varied by sex and race/ethnicity. For example, females outperformed males in each grade in 2005 (see supplemental table 11-2). White and Asian/Pacific Islander students generally outperformed their peers in all three grades. Between 1992 and 2005, average scores increased for White, Black, Hispanic, and Asian/ Pacific Islander 4th-graders (ranging from 5 to 13 points) and for White, Black, and Hispanic 8thgraders (ranging from 4 to 6 points), while scores decreased for White and Black 12th-graders (4 and 6 points, respectively).

NAEP results also permit state-level comparisons of the abilities of 4th- and 8th-graders (but not 12th-graders) in public schools. Of the 42 states that participated at grade 4 in 1992 and 2005, there were increases in average reading scores in 20 states and decreases in 3 states during this period (see supplemental table 11-3). In grade 8, of the 38 states that participated in 1998 and 2005, there were 3 states with higher and 8 states with lower average scores.

READING PERFORMANCE: Percentage of students performing at or above Basic and at or above Proficient in reading, by grade: 1992, 1998, and 2005

Testing accommodations (e.g., extended time, small group testing) for children with disabilities and limited-English-proficient students were not permitted.
NOTE: Beginning in 2002, the NAEP national sample for grades 4 and 8 was obtained by aggregating the samples from each state and the District of Columbia, rather than by obtaining an independently selected national sample. As a consequence, the size of the national samples for grades 4 and 8 increased, and smaller differences between years or between types of students were found to be statistically significant than would have been detected in previous assessments. Differences are based upon unrounded estimates. See supplemental note 4 for more information on testing accommodations, achievement levels, and NAEP.

## Academic Outcomes

## Mathematics Performance of Students in Grade 12

## On the 2005 12th-grade mathematics assessment, students in schools with lower percentages of students eligible for free or reduced-price lunch scored higher on average than those in schools with higher percentages of students eligible for this benefit.

Among other changes, the framework was revised by merging the measurement and geometry content areas into one and by adding additional questions on algebra, data analysis, and probability.
${ }^{2}$ A score location at or below which a specified percentage of the population falls. For example, in 2005, the 10th percentile of 12th-grade mathematics scores was 105 . This means that 10 percent of 12th-graders had NAEP mathematics scores at or below 105, while 90 percent scored above 105.
NOTE:See supplemental note 4 for more information on NAEP.Race categories exclude persons of Hispanic ethnicity.

SOURCE: Grigg, W., Donahue, P., and Dion, G. (2007). The Nation's Report Card: 12th-Grade Reading and Mathematics 2005 (NCES 2007468), data from U.S. Department of Education, National Center for Education Statistics, NAEP Data Explorer.

FOR MORE INFORMATION
Supplemental Note 4
Supplemental Tables 12-1, 12-2

Although the National Assessment of Educational Progress (NAEP) has assessed the mathematics abilities of 12 th-graders in public and private schools since 1990, in 2005, the National Assessment Governing Board revised the grade 12 mathematics framework to reflect changes in high school mathematics standards and coursework. ${ }^{1}$ As a result, even though many questions are repeated from previous assessments, the 2005 results cannot be directly compared with those from previous years.

Reported on a $0-300$ scale in 2005, the average mathematics score of 12 th-graders was set at 150 . Student performance varied on the assessmentscores ranged from 105 at the 10th percentile ${ }^{2}$ to 194 at the 90th percentile (NCES 2007-468). NAEP achievement levels (Basic, Proficient, and Advanced) identify what students should know and be able to do at each grade. Some 23 percent of 12th-graders performed at or above Proficient (indicating solid academic performance) on the assessment, whereas 39 percent performed below Basic (indicating a level of performance below partial mastery of fundamental skills) (see supplemental table 12-1).

Examining overall scores, Asian/Pacific Islander students scored higher on average in 2005 than students in the other four racial/ethnic groups. The average score for White students was higher than the average scores for Black, Hispanic, and American Indian students; Hispanic students scored higher on average than Black students. The same patterns were evident for scores within the four content areas-numbers and operations, measurement and geometry, data analysis and probability, and algebra-with the following exceptions (see supplemental table 12-2): scores for Asian/Pacific Islander students and White students were not significantly different in the number properties and operations and the data analysis and probability content areas. Also, American Indian students scored higher on average than Black students in measurement and geometry.

Differences in overall scores were also observed by school poverty and region. Students attending schools with lower percentages of students eligible for free or reduced-price lunch scored higher than students in schools with higher percentages of eligible students. Students in the Midwest outperformed their peers in the West, South, and Northeast.

MATHEMATICS PERFORMANCE: Average mathematics scores of 12th-grade students, by race/ethnicity, percentage of
students eligible for free or reduced-price lunch, and region: 2005

## Academic Outcomes

## Science Performance of Students in Grades 4,8, and 12

In 2005, the average science score of students was higher at grade 4 than in previous
assessment years, was not measurably different at grade 8, and was lower at grade 12
than in 1996.

The National Assessment of Educational Progress (NAEP) has assessed the science abilities of students in grades 4,8 , and 12 in both public and private schools since 1996, using a separate $0-300$ scale for each grade. The national average 4th-grade science score increased from 147 in 1996 to 151 in 2005; there was no measurable change in the 8th-grade score; and the 12th-grade score decreased from 150 in 1996 to 147 in 2005 (see supplemental table 13-1).

Achievement levels (Basic, Proficient, and Advanced), which identify what students should know and be able to do at each grade, provide another measure of student performance. The percentages of 4th- and 8th-graders at or above Proficient (indicating solid academic achievement) were not measurably different from 1996 to 2005, while the percentage of 12 th-graders at or above this achievement level was lower in 2005 than in 1996. In 2005, some 29 percent of 4th- and 8thgraders and 18 percent of 12 th-graders were at or above Proficient.

Certain subgroups outperformed others in science in 2005. For example, males outperformed females
at all three grades. Male 4th-graders had a higher average score in 2005 than in 1996, and both male and female 12th-graders had lower scores in 2005 than in 1996 (see supplemental table 13-2). White students scored higher, on average, than Black and Hispanic students at all three grades in 2005. At 4th grade, average scores were higher for White, Black, Hispanic, and Asian/Pacific Islander students in 2005 than in 1996. At 8th grade, the average score for Black students was higher in 2005 than in 1996, but the scores did not measurably change for other racial/ethnic groups. At 12th grade, there were no measurable changes in average scores for any racial/ethnic group when comparing results from 2005 with those from 1996.

NAEP results also permit state-level comparisons of the abilities of 4th- and 8th-graders (but not 12thgraders) in public schools. At grade 4, of the 36 states that participated in both the 2000 and 2005 assessments, average science scores were higher in 2005 than in 2000 in 9 states (see supplemental table 13-3). At grade 8, of the 36 states that participated in 1996 and 2005, average scores were higher in 2005 than in 1996 in 8 states and lower in 5 states.

SCIENCE PERFORMANCE: Percentage of students performing at or above Basic and at or above Proficient in science, by grade: 1996, 2000, and 2005

NOTE:Variations or changes in exclusion rates for students with disabilities and limited-Englishproficient students in the NAEP samples may affect comparative performance results. See supplemental note 4 for more information on testing accommodations and NAEP.

NCES 2006-446

## Academic Outcomes

# Trends in the Achievement Gaps in Reading and Mathematics 

Between 1990 and 2005, differences between White and Black and Hispanic scores in reading and mathematics fluctuated at the 4th and 8th grades. Between 2003 and 2005, the most recent period, the achievement gaps in reading and mathematics narrowed for most groups.

NOTE: NAEP scores are calculated on a $0-500$ scale. Student assessments are not designed to permit comparisons across subjects or grades. Race categories exclude persons of Hispanic ethnicity. The score gap is determined by subtracting the average Black and Hispanic score, respectively, from the average White score. Testing accommodations (e.g., extended time, small group testing) for children with disabilities and limited-English-proficient students were not permitted in 1990-94. Beginning in 2002, the NAEP national sample for grades 4 and 8 was obtained by aggregating the samples from each state, rather than by obtaining an independently selected national sample. See supplemental note 4 for more information on NAEP.
SOURCE: U.S. Department of Education, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1990-2005 Reading and Mathematics Assessments, NAEP Data Explorer.

FOR MORE INFORMATION
Supplemental Notes 1,4
Supplemental Table 14-1
NCES 2006-451
NCES 2006-453

The National Assessment of Educational Progress (NAEP) has assessed student reading and mathematics performance since the early 1990s. NAEP thus provides a picture of the extent to which student performance in each subject has changed over time, including the achievement gaps between White and Black and White and Hispanic students.

In reading, the achievement gaps between White and Black and White and Hispanic 4th-graders have fluctuated since 1992, but the gaps in 2005 were not measurably different from those in 1992. In 2005, at the 4th-grade level, Blacks scored, on average, 29 points lower than Whites (on a $0-500$ scale), and Hispanics scored, on average, 26 points lower than Whites (see supplemental table 14-1). At 8 th grade, there was no measurable change in the White-Black achievement gap
between 1992 and 2005, and little change in the White-Hispanic gap, although the gap in 2005 was slightly lower than that in 2003 ( 25 points compared with 27 points).

In mathematics, the achievement gap between White and Black 4th-graders decreased between 1990 and 2005 (from 32 to 26 points). The White-Hispanic 4th-grade gap increased in the 1990s before decreasing in the first half of the 2000 s, but the gap in 2005 ( 20 points) was not measurably different from that in 1990. Among 8th-graders, a similar trend existed in both the White-Black and White-Hispanic score gaps: increases occurred in the 1990s before decreasing to levels not measurably different from those in 1990. In 2005, the White-Black gap was 34 points, and the WhiteHispanic gap was 27 points.

ACHIEVEMENT GAP:Differences in White-Black and White-Hispanic 4th- and 8th-grade average reading and mathematics scores:Various years, 1990-2005

## Academic Outcomes

## Reading and Mathematics Score Trends by Age

## The average reading and mathematics scores on the long-term trend National Assessment of Educational Progress were higher in 2004 than in the early 1970s for 9 - and 13-year-olds.

The long-term trend National Assessment of Educational Progress (NAEP) has provided information on the reading and mathematics achievement of 9-, 13-, and 17-year-olds in the United States since the early 1970s and is used as a measure of progress over time. These results may differ from the main NAEP results presented in indicators 11, 12,13 , and 14 as the content of the long-term trend assessment has remained consistent over time, while the main NAEP undergoes changes periodically (see supplemental note 4).

NAEP long-term trend results indicate that the reading and mathematics achievement of 9-and 13-year-olds improved between the early 1970s and 2004. In reading, 9-year-olds scored higher in 2004 than in any previous assessment year, with an increase of 7 points between 1999 and 2004. The 2004 average score for 13-year-olds was not measurably different from the 1999 average score, but still was higher than the scores in 1971 and 1975. In mathematics, the achievement of 9- and 13-yearolds in 2004 was the highest of any assessment year. The performance of 17 -year-olds on the 2004 reading and mathematics assessment, however, was not measurably different from their performance on either the first reading and mathematics assess-
ments (in 1971 and 1973, respectively) or the 1999 reading and mathematics assessments.

The performance of subgroups of students generally mirrored the overall national patterns; however, there were some notable differences. The average reading and mathematics scores of Black and Hispanic 9-year-olds in 2004 were the highest of any assessment year (see supplemental tables 15-1 and 15-2). For Black 13-year-olds, reading and mathematics scores were higher in 2004 than the scores in the early 1970s, and the 2004 mathematics score was higher than in any previous assessment year. For Hispanic 13-yearolds, mathematics scores were higher in 2004 than in any previous assessment year. In contrast to the overall national results, the average scores of Black and Hispanic 17-year-olds were higher in 2004 than in the early 1970s. Black 17-yearolds improved 25 points in reading between 1971 and 2004, and 15 points in mathematics between 1973 and 2004 on a $0-500$ point scale. Hispanic 17-year-olds improved 12 points in reading between 1975 (the first year the reading achievement of Hispanics was specifically measured) and 2004, and 12 points in mathematics between 1973 and 2004.

NAEP SCORES:Average reading and mathematics scale scores on the long-term trend National Assessment of Educational Progress (NAEP), by age:Various years, 1971 through 2004

NOTE: NAEP has two distinct assessment programs:the long-term trend assessment program and the main assessment program. Data from the long-term trend program, presented in this indicator, come from subject assessments that have remained substantially the same since the early 1970 s in order to measure and compare student achievement over time. In contrast, data from the main NAEP assessment program, presented in indicators 11, 12, 13, and 14, come from subject assessments that are periodically adapted to employ the latest advances in assessment methodology and to reflect changes in educational objectives and curricula. Because the instruments and methodologies of the two assessment programs are different, it is not possible to compare long-term trend results with the main assessment results (see supplemental note 4 for more information on the two NAEP programs). NAEP scores range from 0 to 500.

## Academic Outcomes

# Reading and Mathematics Achievement at 5th Grade 

Fifth-grade children living below the poverty threshold were less likely to demonstrate proficiency in specific reading and mathematics knowledge and skills than children living at or above the poverty threshold.
\# Rounds to zero
${ }^{1}$ Findings are based on all students who participated in the ECLS-K, not just those at grade level. Although most of the children in the sample were in 5 th grade in spring 2004, some 14 percent were in a lower grade, and 1 percent were in a higher grade. Findings are representative of the 3.8 million students in school in spring 2004 who were in kindergarten in fall 1998.

NOTE:The federal poverty-level status composite variable is derived from household income and the total number of household members at each administration of the survey and is used to define households below the poverty level. For instance, in 1998, if a household contained four members and the annual household income was lower than $\$ 16,655$, then the household was considered to be below poverty. Poverty status, kindergarten through spring 2004, and school type, kindergarten through spring 2004 are composite variables that are derived from five rounds of the survey (fall 1998, spring 1999, spring 2000, spring 2002, and spring 2004).
SOURCE:U.S. Department of Education, National Center for Education Statistics, Early Childhood Longitudinal Study, Kindergarten Class of 199899 (ECLS-K), Longitudinal Kindergarten-Third Grade Public-Use Data File, and Fifth-Grade Restricted-Use Data File.

FOR MORE INFORMATION:
Supplemental Notes 1,3
Supplemental Tables 16-1, 16-2
NCES 2006-038

The Early Childhood Longitudinal Study, Kindergarten Class of 1998-99 (ECLS-K) has followed a nationally representative cohort of children from kindergarten into the later grades. This indicator presents findings on children's achievement in reading and mathematics from the spring 2004 data collection, when most of the children were in 5th grade, ${ }^{1}$ by child, family, and school characteristics.

In the spring of 5th grade, the percentage of children demonstrating proficiency in specific skills varied. In reading, 97 percent of children were proficient in understanding words in context, 87 percent in making literal inferences, 70 percent in deriving meaning from text, 44 percent in making interpretations beyond the text, and 7 percent in evaluating nonfiction (see supplemental table 16-1). In mathematics, 92 percent of children demonstrated proficiency in multiplication and division, 74 percent in place value, 43 percent in rate and measurement, 13 percent in fractions, and 2 percent in area and volume (see supplemental table 16-2).

The percentage of children with proficiency in certain reading and mathematics skills varied by child, family, and school characteristics. Students who
lived in households below the poverty threshold for all rounds of the survey were less likely to demonstrate proficiency in reading and mathematics skills than students who lived in households at or above the poverty threshold for all survey rounds. For example, in mathematics, 84 percent of students who lived at or above the poverty threshold for all survey rounds demonstrated proficiency in place value compared with 45 percent of students who lived in poverty for all survey rounds. Generally, students whose mothers had higher levels of education were more likely to master each reading and mathematics skill than students whose mothers had less education.

Female students were more likely than male students to show mastery in four of the five reading skills (no measurable difference was found for evaluating nonfiction); however, male students were more likely than female students to demonstrate mastery in each of the mathematics skills. Children who attended private schools for all rounds of the survey were more likely than students who attended public schools for all rounds of the survey to be proficient in nearly all of the reading and mathematics skills.

READING AND MATHEMATICS SKILLS: Percentage of children who demonstrate specific reading and mathematics skills, by poverty status from kindergarten through 5th grade: Spring 2004

## Academic Outcomes

# International Comparisons of Mathematics Cognitive Domains of 4th- and 8th-Graders 

#### Abstract

U.S. 4th- and 8th-graders performed above the international averages in knowing mathematical facts, procedures, and concepts; in applying mathematical knowledge and understanding; and in mathematical reasoning.

The Trends in International Mathematics and Science Study (TIMSS) conducted in 2003 assessed students' mathematics performance in 25 countries at grade 4 and 46 countries at grade 8 . In addition to reporting overall mathematics scores, TIMSS developed scales in three mathematics cognitive domains: knowing facts, procedures, and concepts needed to solve mathematical problems; applying knowledge of facts, skills, and procedures to create representations and solve routine problems; and reasoning to solve more complex, nonroutine problems through logical thinking. ${ }^{1}$

At grade 4, U.S. students scored above the international average of all 25 countries in the mathematics cognitive domains of knowing, applying, and reasoning (see supplemental table 17-1). U.S. 4th-graders performed relatively better in knowing than in applying and reasoning: U.S. students outperformed students in 17 countries in knowing, 11 countries in applying, and 12 countries in reasoning.

Among the participating countries with a high value on the United Nations Development Program's Human Development Index (HDI), ${ }^{2}$ U.S. 4th-graders, on average, outperformed their peers in Australia, Italy, New Zealand, Norway, Scotland, and Slovenia across the
three domains. Fourth-graders in Belgium (Flemish), Chinese Taipei, Hong Kong SAR, Japan, and Singapore outperformed U.S. students, on average, across all three cognitive domains. Students in England and the Netherlands outperformed U.S. 4th-graders in applying and reasoning, but not in knowing.

Like their 4th-grade counterparts, U.S. 8thgraders scored above the international average of all 46 countries in all three mathematics cognitive domains and relatively better in knowing than in applying and reasoning (see supplemental table 17-2). U.S. 8th-graders outperformed students in 31 countries in knowing, 25 countries in applying, and 27 countries in reasoning.

Among the high-HDI-value participating countries, U.S. 8th-graders, on average, outperformed their peers in Italy, Norway, and Slovenia across the three domains (see the figure on pages 43-44). U.S. students outperformed their peers in an additional five countries in the knowing domain and in one country in the reasoning domain. Eighth-graders in Belgium (Flemish), Chinese Taipei, Hong Kong SAR, Japan, Korea, Netherlands, and Singapore outperformed their U.S. peers, on average, across all three cognitive domains.
' The cognitive domain scales were created to have the same mean and standard deviation as the overall $T$ IMSS 2003 mathematics achievement scales: a mean of 495 and standard deviation of 100 at grade 4 and a mean of 467 and standard deviation of 100 at grade 8 .
${ }^{2}$ The Human Development Index (HDI) ranks countries along three dimensions of human development: life expectancy at birth; the adult literacy rate and gross enrollment for primary, secondary, and tertiary education; and gross domestic product (GDP) per capita (using purchasing power parity [PPP] indices). The index has a minimum value of 0 and a maximum value of 1 . Countries with high index values enjoy long life expectancy, high levels of school enrollment and adult literacy, and a good standard of living. For this indicator, a high index value is 0.9 or above. The index is explained in detail in the United Nations Development Program's (UNDP) Human Development Report 2005, available at http://hdr. undp.org/reports/global/2005/.Though Chinese Taipei is not assigned an HDI value in the UNDP report, it is included here because it is a highachieving country in mathematics.
${ }^{3}$ Hong Kong is a Special Administrative Region (SAR) of the People's Republic of China.
${ }^{4}$ Met international guidelines for participation rates only after replacement schools were included.
${ }^{5}$ Nearly satisfied guidelines for sample participation rates after replacement schools were included.
${ }^{6}$ Did not satisfy guidelines for sample participation rates. Less than 50 percent of original schools participated.
${ }^{7}$ The international average reflects the results of all participating countries, not just those shown in the figures. See supplemental tables 17-1 and 17-2 for the full results.

NOTE:Countries are ordered based on the overall 2003 mathematics average scores. Countries were required to sample students in the upper of the two grades that contained the largest number of 9 -year-olds and 13 -year-olds. In the United States and most countries, this corresponds to grades 4 and 8, respectively. Participants were scored on a 1,000-point scale. The international standard deviation is 100 .

# Adult Literacy <br> Trends in Adult Literacy 

While the quantitative literacy of adults improved from 1992 to 2003, the prose and document literacy of adults was not measurably different between these two years.

NOTE:Adults are defined as people age 16 or older living in households or prisons. Prose literacy is the knowledge and skills needed to perform prose tasks (i.e., to search, comprehend, and use information from continuous texts, such as paragraphs from stories); document literacy is the knowledge and skills needed to perform document tasks (i.e., to search, comprehend, and use information from noncontinuous texts in various formats, such as bills or prescription labels; ;and quantitative literacy is the knowledge and skills required to perform quantitative tasks (i.e., to identify and perform computations, either alone or sequentially, using numbers embedded in printed materials). Race categories exclude persons of Hispanic ethnicity. In 1992, respondents were allowed to identify only one race; in 2003, respondents were allowed to identify multiple races. Included in the total but not shown separately are American Indians/Alaska Natives and respondents with more than one race. Results are reported in terms of average scores on a $0-500$ scale. To compare results between 1992 and 2003, the 1992 results were rescaled using the criteria and methods established for the 2003 assessment. Detail may not sum to totals because of rounding.
SOURCE: Kutner, M., Greenberg, E., and Baer, J. (2005). A First Look at the Literacy of America's Adults in the 21st Century (NCES 2006-470), figure 2, data from U.S. Department of Education, National Center for Education Statistics, 2003 National Assessment of Adult Literacy (NAAL).

FOR MORE INFORMATION
Supplemental Notes 1,3
Supplemental Tables 18-1,
18-2
NCES 2006-471

Adults age 16 or older were assessed in three types of literacy (prose, document, and quantitative) in 1992 and 2003. Literacy is defined as "using printed and written information to function in society, to achieve one's goals, and to develop one's knowledge and potential." The average prose and document literacy scores of U.S. adults were not measurably different in 2003 from 1992, but the average quantitative literacy score increased 8 points between these years (see supplemental table 18-1).

One measure of literacy is the percentage of adults who perform at four achievement levels: Below Basic, Basic, Intermediate, and Proficient. In each type of literacy, 13 percent of adults were at or above Proficient (indicating they possess the skills necessary to perform complex and challenging literacy activities) in 2003 (see supplemental table 18-2). Twenty-two percent of adults were Below Basic (indicating they possess no more than the most simple and concrete literacy skills) in quantitative literacy, compared with 14 percent in prose literacy and 12 percent in document literacy.

Differences in average literacy scores were apparent by sex and race/ethnicity. Women scored
higher than men on prose and document literacy in 2003, unlike in 1992. Men outperformed women on quantitative literacy in both years. Male scores declined in prose and document literacy from 1992 to 2003, while female scores increased in document and quantitative literacy. In 1992 and 2003, White and Asian/Pacific Islander adults had higher average scores than their Black and Hispanic peers in the three types of literacy assessed. Black performance increased in each type of literacy from 1992 to 2003, while Hispanic average scores declined in prose and document literacy.

Additional differences in average literacy were apparent by education and age. Educational attainment is positively related to all three types of literacy: those with any education after high school outperformed their peers with less education in 1992 and 2003. Between these years, average prose literacy decreased for most levels of educational attainment, and average document literacy decreased for those with some college, associate's degrees, and college graduates. From 1992 to 2003, the average prose, document, and quantitative literacy scores of adults ages 50-64 and 65 or older increased.

ADULT LITERACY PERFORMANCE: Percentage of adults scoring at each achievement level in prose, document, and quantitative literacy:2003

# Social and Cultural Outcomes Youth Neither in School nor Working 

In 2006, about 8 percent of youth ages 16-19 were neither enrolled in school nor working.

There are many reasons why youth between the ages of 16 and 19 may neither be enrolled in school nor working. For example, they may be seeking but unable to find work, or they may have left the workforce or school, either temporarily or permanently, to start a family. This indicator provides information on youth at a time when most are transitioning into postsecondary education or the workforce. This is a critical period for young people as they pursue their educational goals and career paths.

From 1986 through 2006, the percentage of youth ages 16-19 neither enrolled in school nor working remained between 7 and 10 percent annually (see supplemental table 19-1). Within any single year, the percentage of such youth varied across certain subgroups of the population. In 2006, for example, the percentage of such youth varied by age, education, race/ethnicity, citizenship, and family poverty, though it was not measurably different by sex.

Differences were found by race/ethnicity and citizenship. In each year observed, higher percentages of Black and Hispanic youth than White youth were neither enrolled in school nor working. In 2006, 11 percent each of Hispanic and Black youth were
neither enrolled in school nor working, compared with 6 percent each of White and Asian youth. A greater percentage of non-U.S. citizen youth (13 percent) were neither enrolled in school nor working than U.S.-born youth (7 percent).

Family poverty was positively related to the prevalence of youth who were neither enrolled in school nor working. In each year observed from 1986 to 2006, the percentage of such youth was higher among youth from poor and near-poor families than among youth from nonpoor families. In 2006, these percentages were 17 percent, 10 percent, and 5 percent, respectively.

In 2006, about 12 percent of youth ages 18-19 were neither in school nor working, compared with 4 percent of youth ages 16-17. Higher percentages of youth ages 18-19 than youth ages 16-17 were neither in school nor working across all years observed. Of youth with less than a high school diploma or the equivalent, a greater percentage of youth ages 18-19 than youth ages 16-17 were neither in school nor working in 2006 ( 13 vs .3 percent). This pattern held true for all years observed.

NOTE:Race categories exclude persons of Hispanic ethnicity. The Current Population Survey (CPS) questions used to obtain educational attainment data were changed in 1992. In 1994, the survey instrument for the CPS was changed and weights were adjusted. Estimates are revised from previous editions. The data presented here represent the percentage of civilian, noninstitutionalized 16 - to 19-year-olds who are neither enrolled in school nor working. See supplemental note 2 for more information on the CPS and for an explanation of the"neither enrolled nor working" variable.
SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), March and Annual Social and Economic Supplement, selected years, 1986-2006.

Supplemental Notes 1,2
(i)

Supplemental Table 19-1

# Economic Outcomes Annual Earnings of Young Adults 

> Adults ages 25-34 with a bachelor's degree or higher have higher median earnings than their peers with less education, and these earnings differences increased from 1980 to 2005.

Includes those who earned a high school diploma or equivalent (e.g.,a General Educational Development [GED] certificate).
NOTE: Earnings are presented in 2004 constant dollars by means of the Consumer Price Index (CPI) to eliminate inflationary factors and allow direct comparison across years. See supplemental note 11 for further discussion. Full-year worker refers to those who were employed 50 or more weeks the previous year; full-time worker refers to those who were usually employed 35 or more hours per week. The Current Population Survey (CPS) questions used to obtain educational attainment were changed in 1992. In 1994, the survey instrument for the CPS was changed and weights were adjusted. See supplemental note 2 for further discussion.

SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), March and Annual Social and Economic Supplement, selected years, 1981-2006.

FOR MORE INFORMATION:
Supplemental Notes 1,2,11
Supplemental Tables 20-1, 20-2

This indicator examines the relationship between education and median annual earnings, in constant 2004 dollars, for young adults ages 25-34 who work full time throughout a full year.

For each year shown between 1980 and 2005, earnings for young adults increased when education level increased (see supplemental tables 20-1 and 20-2). For example, young adults with at least a bachelor's degree consistently had higher median earnings than those with less education. This pattern generally held for male, female, White, Black, Hispanic, and Asian subgroups. Moreover, for the entire population and generally for each subgroup, the difference between the earnings of those with at least a bachelor's degree and those with less education grew during this period. For example, males with a bachelor's or higher degree earned 19 percent more than male high school completers ${ }^{1}$ in 1980 and 64 percent more than male high school completers in 2005 (see supplemental table 20-1).

During the period between 1980 and 2005, earnings fluctuated among those with at least a bachelor's degree and decreased among those
with less education, thus contributing to the growth in the median income gap. For example, the earnings of those with a high school diploma ${ }^{1}$ decreased by $\$ 5,600$ between 1980 and 2005, while the earnings of those with a bachelor's or higher degree increased by $\$ 2,300$.

Males have higher median earnings than females at each level of educational attainment. However, the gaps between the sexes at each educational level were smaller in 2005 than in 1980. For example, males with a bachelor's degree or higher earned 36 percent more than their female counterparts in 1980, compared with 23 percent more in 2005.

In 2005, Asian young adults with a bachelor's degree or higher generally had higher earnings than their White peers, and both groups had higher earnings than their Black and Hispanic peers (see supplemental table 20-2). Unlike in 2004 where a difference was detected, in 2005 there were no measurable differences in earnings between White young adults who did not complete high school and their Black and Hispanic peers.

ANNUAL EARNINGS:Median annual earnings of full-time, full-year wage and salary workers ages 25-34, by educational attainment:Selected years, 1980-2005

This List of Indicators includes all the indicators in Section 3 that appear on The Condition of Education website (http://nces.ed.gov/programs/ (00), drawn from the 2000-2007 print volumes. The list is organized by subject area. The indicator numbers and the years in which the indicators were published are not necessarily sequential.

# Introduction: Student Effort and Educational Progress 

The indicators in this section of The Condition of Education report on the progress students make through the education system. There are 23 indicators in this section: 8, prepared for this year's volume, appear on the following pages, and all 23 , including selected indicators from previous volumes, appear on the Web (see Website Contents on the facing page for a full list of the indicators). Particular attention is paid to how various subgroups in the population proceed through school and attain different levels of education and what factors are associated with their success along the way.

The first two subsections consider students' academic aspirations and effort. The indicators include student measures of time spent on homework, preparedness for academic activities, postsecondary expectations, and patterns of school attendance.

The third subsection traces the progress of students through elementary and secondary education to graduation from high school or some alternate form of completion. Measures include the percentage of students who leave high school (drop out) before completion and the percentage who graduate high school on time, in 4 years. Dropouts are measured by event rates (the percentage of students in an age range who leave school in a given year) and status rates (the percentage of students in an age range who are not enrolled in school and who have not completed high school). Indicators on the following pages show the status dropout rate by race/ethnicity and characteristics of students in the spring of their sophomore year in 2002 who had dropped out 2 years later. In
addition, the averaged freshman graduation rate estimates the on-time graduation rate for each state.

The fourth subsection examines the transition to college. An important measure is the percentage of students who make the transition to college within 1 year of completing high school. An indicator on the website compares the rate of first-time enrollment in postsecondary education in the United States with the rates in other countries.

The fifth subsection concerns the percentage of students who enter postsecondary education who complete a credential and how much time they take to do so. This subsection also includes relationships between the qualifications and characteristics of students who enter postsecondary education and their success in completing a credential.

An overall measure of the progress of the population through the education system is attainment, which is the highest level of education completed by a certain age. The Condition of Education annually examines the level of attainment by those ages 24-29. Other indicators examine factors related to the level of attainment and the number of undergraduate and graduate degrees earned over time by particular cohorts of students and by race/ethnicity.

The indicators on student effort and educational progress from previous editions of The Condition of Education, which are not included in this volume, are available at http://nces. ed.gov/programs/coe/list/i3.asp.

# Student Attitudes and Aspirations Time Spent on Homework 

Between 1980 and 2002, the percentage of sophomores spending more than 10 hours per week on homework increased from 7 to 37 percent.

Homework are tasks given to students by teachers as a means to review, practice, and learn material outside of the classroom. This indicator examines 1980 and 2002 high school sophomores' reports of how much time they spend on homework per week. In 1980 and 2002, high school sophomores were asked, "What is the average time per week you spend on homework?" ${ }^{1}$

Between 1980 and 2002, the average amount of time per week that sophomores reported spending on homework increased (see supplemental table 21-1). During this period, the percentage of sophomores who reported spending less than 1 hour per week on homework declined from 17 to 2 percent. At the same time, the percentage who reported spending less than 5 hours per week on homework decreased from 71 to 37 percent. These declines were accompanied by an increase in the percentage of sophomores who reported spending between 5 and 10 hours per week on homework (from 22 to 26 percent) and a fivefold increase in the percentage who
reported spending more than 10 hours per week on homework (from 7 to 37 percent).

This general increase between 1980 and 2002 in the number of hours sophomores reported spending on homework was apparent for both males and females. The percentage of males who reported spending more than 10 hours per week on homework increased from 6 to 33 percent. For females, this percentage increased from 8 to 41 percent.

Among the 1980 and 2002 sophomores, females generally reported spending more time on homework than males. For example, 41 percent of females in 2002 compared with 33 percent of males reported spending more than 10 hours per week on homework. That same year, 19 percent of females compared with 26 percent of males reported spending 3 hours or less per week on homework. No measurable differences were detected by sex in the percentage who reported spending between 3 to 10 hours per week on homework.

HOMEWORK: Percentage of 10th-graders reporting time spent on homework, by hours spent on homework per week: 1980 and 2002

${ }^{1}$ Caution must be used when interpreting the estimates reported here because the survey method used to ask about time spent on homework per week differed in 1980 and 2002. The 1980 survey asked about "homework" without differentiating between homework completed in school and out of school; it also used the categories reported here as predefined response categories. The 2002 survey asked students to report both in-school and out-of-school homework and used an open-ended response format. The 2002 responses were then grouped into the 1980 response categories.

## Student Attitudes and Aspirations Student Preparedness

In 2002, a quarter of 10th-graders reported that they "usually" or "often" came to school without their homework.

Student academic preparedness is a demonstration of the extent to which students are actively engaged in education and is crucial to the learning process (Newmann 1992; Ryan and Deci 2000; Pintrich 2003). This indicator examines student preparedness by looking at high school students' reports of how often they came to school without books; without paper, pen, or pencil; and without their homework. For each of these three measures, the percentage of students who reported being chronically unprepared for school (i.e., "usually" or "often") was larger in 2002 than in 1980. However, percentages were lower in 1990 than in 1980 or 2002 . For example, the percentage who reported coming to school usually or often without their homework in 2002 was 26 percent, compared with 22 percent in 1980 and 18 percent in 1990. The percentage who reported coming to school usually or often without paper, pen, or pencil or without their books followed a similar pattern.

Across all three years, males reported coming to school unprepared more often than females. For example, in 2002, about 30 percent of males came to school usually or often without their homework, compared with 21 percent of females. Similar patterns held for the two other measures.

Across all three years, students in the lowest test score quarter reported coming to school unprepared more often than students in the highest test score quarter. In 2002, about 38 percent of students with the lowest test scores came to school usually or often without their homework, compared with 18 percent of students with the highest test scores.

Ryan and Deci 2000
Pintrich 2003

EDUCATIONAL PREPAREDNESS: Percentage of 10th-graders who usually or often came to school unprepared without school books, supplies, or homework, by selected student characteristics: 1980, 1990, and 2002

# Elementary/Secondary Persistence and Progress Status Dropout Rates by Race/Ethnicity 

## Status dropout rates for Whites, Blacks, and Hispanics ages 16-24 have each generally declined since 1972, but in 2005, status dropout rates for Whites remained lower than rates for Hispanics and Blacks.

High school dropouts are more likely than high school completers to be unemployed and earn less when they are employed (U.S. Department of Commerce 2006, tables 261 and 686). In addition, among adults age 25 or older, regardless of income, dropouts reported worse health than high school completers (Pleis and LethbridgeÇejku 2006, table 21).

The status dropout rate represents the percentage of an age group that is not enrolled in school and has not earned a high school credential (i.e., diploma or equivalent, such as a General Educational Development [GED] certificate). For this indicator, status dropout rates are reported for 16 - through 24 -year-olds. The status dropout rate for this age group declined from 15 percent in 1972 to 9 percent in 2005 (see supplemental table 23-1). A decline was also seen between 2000 and 2005, the more recent years of this time span (11 vs. 9 percent).

Status dropout rates and changes in these rates over time differ by race/ethnicity. The status dropout rates for Whites, Blacks, and Hispanics each generally declined between 1972 and 2005. However, for each year between 1972 and 2005,
the status dropout rate was lowest for Whites and highest for Hispanics. Although the gaps between the rates of Blacks and Whites and Hispanics and Whites have decreased, the patterns have not been consistent. The Black-White gap narrowed during the 1980s, with no measurable change during the 1970s or between 1990 and 2005. In contrast, the Hispanic-White gap narrowed between 1990 and 2005, with no measurable change in the gap during the 1970s and 1980s.

In 2005, Hispanics who were born outside of the United States ${ }^{1}$ represented 7 percent of the 16 - through 24 -year-old population and 27 percent of all status dropouts in this age group (see supplemental table 23-2). Higher dropout rates among these Hispanic immigrants partially account for the persistently high dropout rates for all Hispanic young adults. Among Hispanic 16 - through 24 -year-olds who were born outside the United States, the status dropout rate was 36 percent in 2005-more than double the rates for Hispanics in this age group who were born in the United States ( 14 and 12 percent, respectively). Nevertheless, Hispanics born in the United States were more likely to be status dropouts than their non-Hispanic counterparts.

STATUS DROPOUTS: Dropout rates of 16- through 24-year-olds, by race/ethnicity: October 1972-2005

${ }^{1}$ The United States refers to the 50 states and the District of Columbia.
NOTE: The status dropout rate discussed in this indicator is one of a number of rates reporting on high school dropout and completion behavior in the United States. See supplemental note 7 for more information about the rate reported here. Total includes other race/ethnicity categories not separately shown. Race categories exclude persons of Hispanic ethnicity. Some estimates are revised from previous publications.

# Elementary/Secondary Persistence and Progress 

 Public High School Graduation Rates by StateAbout three-quarters of the freshman class graduated from high school on time with a regular diploma in 2003-04.

${ }^{1}$ In order to compare across years, the number of graduates in New York and Wisconsin was imputed. To impute the number of graduates in these states in 2003-04, the 2002-03 averaged freshman graduation rates forWisconsin and New York were applied to the average of the grade specific enrollment data in the state for grade 8 in 1999-2000, grade 9 in 2000-01, and grade 10 in 2001-02. This approach yielded estimates of 142,526 and 62,784 regular diploma recipients in 2003-04 in New York and Wisconsin, respectively. Thus, assuming no change in the graduation rates in these two states, the estimated count of graduates for the nation was $2,753,438$, and the corresponding averaged number of public school freshmen was 3,704,001.

SOURCE: Laird, J., DeBell, M., and Chapman, C. (2006). Dropout Rates in the United States: 2004 (NCES 2007-024), table 12, and Laird, J., Lew, S., DeBell, M., and Chapman, C. (2006). Dropout Rates in the United States: 2002 and 2003 (NCES 2006-062), tables 12-A and 12-B, data from U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "State Non-Fiscal Data Files," 1997-2005.

FOR MORE INFORMATION:
Supplemental Notes 3,7
Supplemental Table 24-1
NCES 2006-604
NCES 2006-605

This indicator examines the percentage of public high school students who graduate on time with a regular diploma. To do so, it uses the averaged freshman graduation rate-an estimate of the percentage of an incoming freshman class that graduates 4 years later. The averaged freshman enrollment count is the sum of the number of 8 th-graders 5 years earlier, the number of 9 th-graders 4 years earlier (because this is when current year seniors were freshmen), and the number of 10th-graders 3 years earlier, divided by 3 . The intent of this averaging is to account for the high rate of grade retention in the freshman year, which adds 9 th-grade repeaters from the previous year to the number of students in the incoming freshman class each year.

Among public high school students in the class of 2003-04, the averaged freshman graduation rate was 75.0 percent in the 48 reporting states and the District of Columbia (see supplemental table 24-1). New York and Wisconsin did not report 2003-04 graduation counts. Among the states that reported 2003-04 graduation
counts, Nebraska had the highest averaged freshman graduation rate at 87.6 percent; Nevada had the lowest rate at 57.4 percent.

In order to compare across years, the number of graduates for the two states that did not report in 2003-04 was estimated. ${ }^{1}$ When these estimates are included with the reported 2003-04 data, the estimated rate for the nation was 74.3 percent. Using these estimates, the overall averaged freshman graduation rate among public school students increased from 71.7 percent for the class of 2000-01 to 74.3 percent for the class of 2003-04. Between these years, there was an increase in the graduation rate in 44 states and the District of Columbia; 9 states (Colorado, Florida, Louisiana, Oregon, South Dakota, Tennessee, Texas, Vermont, and Washington) and the District of Columbia had an increase of greater than 5 percentage points. The graduation rate decreased in 5 states [Alaska, Arizona, Michigan, Nevada, and New York (2002-03 data)], with Arizona and Nevada experiencing declines of greater than 5 percentage points.

## Transition to College <br> Immediate Transition to College

The rate of college enrollment immediately after high school increased from 49 percent in 1972 to 69 percent in 2005.

The percentage of high school completers ${ }^{1}$ who enroll in college in the fall immediately after high school reflects the accessibility and perceived value of college education. The immediate college (2- or 4-year) enrollment rate for all high school completers ages 16-24 increased between 1972 and 1997 from 49 to 67 percent. Then, the enrollment rate declined to 62 percent by 2001, before rising to 69 percent in 2005 (see supplemental table 25-1).

Between 1972 and 1980, approximately half of White high school completers immediately enrolled in college. This immediate enrollment rate increased from the late 1970s through 1998 to 69 percent, but decreased to 64 percent by 2001 before increasing again to an all-time high of 73 percent in 2005. The annual Black immediate enrollment rate fluctuated between 1972 and 1977, but then decreased between 1978 and 1982 , widening the gap between Blacks and Whites. The rate for Blacks then increased generally between 1983 and 2005, so that the gap narrowed between Blacks and Whites between 1999 and 2001. However, the gap has widened again since 2002. For Hispanics, the immediate college enrollment rate fluctuated over time, but increased overall between 1972 and 2005;
nonetheless, the gap between Hispanics and Whites widened between 1979 and 1998, and then again between 2002 and 2005.

From 1972 to 2005, the immediate enrollment rate of high school completers increased faster for females than for males (see supplemental table 25-2). Much of the growth in the overall rate for females was due to increases between 1981 and 1997 in the rate of attending 4-year institutions. During this period, the rate at which females enrolled at 4 -year institutions increased faster than it did for their male counterparts and for either males or females at 2-year institutions.

Differences in immediate enrollment rates by family income and parents' education have persisted. In each year between 1972 and 2005, the immediate college enrollment rate was higher for high school completers from high-income families than for their low-income peers (see supplemental table 25-1). ${ }^{2}$ Likewise, compared with completers whose parents had a bachelor's or higher degree, those whose parents had less education had lower rates of immediate college enrollment in each year between 1992 and 2005 (see supplemental table 25-3). ${ }^{3}$

COLLEGE ENROLLMENT RATES:Actual and trend rates of high school completers who were enrolled in college the October immediately following high school completion, by race/ethnicity: 1972-2005

Refers to those who completed 12 years of school for survey years 1972-1991 and to those who earned a high school diploma or equivalency certificate (e.g., a General Educational Development [GED] certificate) for all years since 1992. See supplemental note 2 for more information.
${ }^{2}$ Low income refers to the bottom 20 percent of all family incomes, high income refers to the top 20 percent of all family incomes, and middle income refers to the 60 percent in between. See supplemental note 2 for further information.
${ }^{3}$ The earliest year with comparable data available for parents' educational attainment is 1992.

NOTE:Includes those ages 16-24 completing high school in a given year. Actual rates are annual estimates; trend rates show the splined linear trend of these annual values over the period shown.Trend rates were obtained through splined regression that determines breakpoints (for years) empirically by searching for statistically significant linear adjustment knots from all possible knots. The Current Population Survey (CPS) questions used to obtain educational attainment were changed in 1992. In 1994, the survey methodology for the CPS was changed and weights were adjusted. See supplemental note 2 for further information. Race categories exclude persons of Hispanic ethnicity. The erratic nature of the Hispanic rate reflects, in part, the small sample size of Hispanic high school completers.

## Completions Degrees Earned

## Minority students have accounted for about half of the growth in the number of associate's and bachelor's degrees and 73 percent of the growth in first-professional degrees earned since 1976-77, while nonresident aliens have accounted for the majority of growth in doctoral degrees.

NOTE:Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.
SOURCE:U.S. Department of Education, National Center for Education Statistics, 1976-77 through 1984-85 Higher Education General Information Survey (HEGIS), "Degrees and Other Formal Awards Conferred"surveys;and 1988-89 through 2004-05 Integrated Postsecondary Education Data System, "Completions Survey" (IPEDS-(:89-99), and Fall 2000 through Fall 2005.

FOR MORE INFORMATION:
Supplemental Notes 3,10
Supplemental Tables 26-1,26-
2,26-3,26-4,26-5,26-6

Between 1976-77 and 2004-05, enrollments in postsecondary degree-granting institutions increased by 57 percent (NCES 2006-030, table 3). This growth in enrollment has been accompanied by increases in the number of degrees earned, with the number of associate's degrees increasing by 72 percent, bachelor's degrees by 57 percent, master's degrees by 81 percent, first-professional degrees by 36 percent, and doctoral degrees by 59 percent (see supplemental table 26-1). For example, the annual number of bachelor's degrees earned increased from 918,000 in 1976-77 to $1,439,000$ in 2004-05.

During this period, minority students accounted for roughly half of the increase in the number of associate's and bachelor's degrees earned (see supplemental tables 26-2 and 26-3). For example, while the number of bachelor's degrees earned by Whites increased 241,000 (from 808,000 to $1,049,000$ ), the number of bachelor's degrees earned by minority students increased 250,000 (from 95,000 to 345,000 ). Minority students accounted for 34 percent of the increase in the number of master's degrees, 73 percent of the increase in the number of first-professional degrees, and 28 percent of the increase in the number of doctoral degrees earned (see supple-
mental tables 26-4, 26-5, and 26-6). Nonresident aliens (foreign students) accounted for 22 percent of the increase in the number of master's degrees earned and 54 percent of the increase in doctoral degrees earned. As a result, the ratio of doctoral degrees earned by nonresident aliens to doctoral degrees earned by White and minority students in 2004-05 was 1 to 3, whereas it was 1 to 8 in 1976-77.

Among minority students, Asian/Pacific Islander students experienced the greatest rates of growth in the number of degrees earned during this period. The number of first-professional degrees earned by Asian/Pacific Islander students grew by 930 percent, bachelor's degrees by 600 percent, master's degrees by 540 percent, associate's degrees by 380 percent, and doctoral degrees by 340 percent.

White students experienced slower growth in the number of degrees earned than minority or nonresident alien students over this period: among Whites, the number of associate's, bachelor's, and master's degrees earned grew between 30 and 43 percent, while the number of doctoral degrees earned grew by 13 percent. Despite slower growth, however, White students still earned the majority of all degrees conferred every year.

## Completions Educational Attainment

In 2006, some 86 percent of 25- to 29-year-olds had received a high school diploma or equivalency certificate. This rate has remained between 85 and 88 percent over the last 30 years.

In 2006, some 86 percent of all 25 - to 29-yearolds had received a high school diploma or equivalency certificate (see supplemental table $27-1$ ). Although this percentage increased 7 percentage points between 1971 and 1976, the high school completion rate has remained between 85 and 88 percent over the last 30 years.

In 1971, a lower percentage of Blacks than Whites completed high school ( 59 vs. 82 percent). Although the gap between Blacks and Whites decreased 15 percentage points between 1971 and 1982, the gap has been between 4 and 10 percentage points since 1982. In 2006, the high school completion rate for Blacks was still below that of Whites ( 86 vs. 93 percent). The high school completion rate for Hispanics increased between 1971 and 2006 ( 48 vs. 63 percent). Unlike the gap between Blacks and Whites, the gap between Hispanics and Whites did not change measurably between 1971 and 2006.

The rate at which 25 - to 29 -year-olds completed at least some college education increased from 34 to 58 percent between 1971 and 2006 (see supplemental table 27-2). However, increases in the rate
were not consistent throughout the entire period. The rate increased during the 1970 s, leveled off during the 1980 s, and increased in the early and mid-1990s. Since the mid-1990s, the rate has leveled off again. For each racial/ethnic group, the percentage completing at least some college was higher in 2006 than in 1971. However, the rate of increase was less for Hispanics than for Whites or Blacks. In 2006, about 66 percent of White 25 - to 29-year-olds had completed at least some college, compared with 50 percent of their Black peers and 32 percent of their Hispanic peers.

In most years, the rate for completing a bachelor's degree or higher was roughly half the rate for completing at least some college. Between 1971 and 1996, the percentage of 25 - to 29 -year-olds who had completed a bachelor's degree or higher increased from 17 to 27 percent (see supplemental table 27-3). Although this represents an increase of 10 percentage points, the rate has remained between 27 and 29 percent since 1996. While the percentage of 25 - to 29 -year-olds with a bachelor's degree or higher increased for all three racial/ethnic groups, the gaps between Whites and their Black and Hispanic peers widened during this period.

HIGH SCHOOL: Percentage of 25- to 29-year-olds who completed high school, by race/ethnicity:March 1971-2006

${ }^{1}$ Included in the totals but not shown separately are estimates for those from other racial/ethnic categories.
NOTE: Prior to 1992, high school completers referred to those who completed 12 years of schooling, and some college meant completing 1 or more years of college; beginning in 1992, high school completers referred to those who received a high school diploma or equivalency certificate, and some college meant completing any college at all. In 1994, the survey instrument for the Current Population Survey (CPS) was changed and weights were adjusted. See supplemental note 2 for further discussion. Some estimates are revised from previous publications. Race categories exclude persons of Hispanic ethnicity.

BACHELOR'S DEGREE OR HIGHER: Percentage of 25- to 29-year-olds with a bachelor's degree or higher, by race/ethnicity: March 1971-2006

## Completions Degrees Earned by Women

Women have earned a greater percentage of bachelor's degrees than men since the early 1980s overall, but men still earn a greater percentage in some fields, including computer and information sciences and engineering.

Women earn a greater number and proportion of bachelor's, master's, and doctoral degrees than they did 25 years ago. Between 1979-80 and 2004-05, the percentage of bachelor's degrees earned by women increased from 49 to 57 percent. This indicator examines the change in the percentage of degrees earned by women between 1979-80 and 2004-05, by selected fields of study.

While women have earned more than half of all bachelor's degrees awarded since 1981-82 (NCES 2007-017, table 246), the percentage of bachelor's degrees awarded in particular fields of study has varied. For example, although women earned 87 percent of the degrees awarded in health professions in 2004-05, they earned less than a quarter of the bachelor's degrees awarded in the fields of computer/information sciences (22 percent) and engineering and engineering technologies ( 18 percent). Women also earned fewer degrees than men in the fields of agriculture/natural resources ( 48 percent), mathematics and statistics ( 45 percent), and physical sciences and science technologies ( 42 percent).

Between 1979-80 and 2004-05, the percentage of master's degrees earned by women increased from 49 to 59 percent (see supplemental table 281). The percentage of master's degrees awarded to women in particular fields of study has also varied, and there are still fields with large differences by sex. For example, in 2004-05, while women earned 79 percent of the master's degrees awarded in psychology, they earned 23 percent of the master's degrees awarded in engineering and engineering technologies.

Women earned just under half of the doctoral degrees awarded in 2004-05 (49 percent), an increase from the 30 percent of doctoral degrees awarded to women in 1979-80. At the doctoral level in 2004-05, men earned more degrees than women in more fields than they did at the bachelor's and master's levels. Women earned less than 30 percent of the doctoral degrees awarded in 2004-05 in mathematics and statistics, physical sciences and science technologies, computer/information sciences, and engineering and engineering technologies.

BACHELOR'S DEGREES: Percentage of bachelor's degrees earned by women and change in the percentage earned by women, by field of study: Selected years, 1979-80 through 2004-05

| Field of study 19 | 1979-80 | 1989-90 | $\begin{array}{r} 1999- \\ 2000 \end{array}$ | 2004-05 | Change in percentage points between 1979-80 and 2004-05 |

This List of Indicators includes all the indicators in Section 4 that appear on The Condition of Education website (http:///nces.ed.gov/programs/ (00), drawn from the 2000-2007 print volumes. The list is organized by subject area.The indicator numbers and the years in which the indicators were published are not necessarily sequential.

# Introduction: Contexts of Elementary and Secondary Education 

The indicators in this section of The Condition of Education measure salient features of the context of learning in elementary and secondary schools. This includes the content of learning and expectations for student performance; processes of instruction; mechanisms of choice in education; characteristics of teachers and the teaching profession; the climate for learning and other organizational aspects of schools; and the financial resources available. There are 30 indicators in this section: 13, prepared for this year's volume, appear on the following pages, and all 30, including indicators from previous years, appear on the Web (see Website Contents on the facing page for a full list of the indicators).

The first subsection examines learning opportunities afforded children. Measures include the extent of afterschool activities of youth and student/teacher ratios in public schools. Additional indicators on the Web show the availability of advanced-level academic courses, participation in early literacy activities, and the extent of out-of-field teaching.

The indicators in the second subsection look at special programs to serve the particular educational needs of special populations. For example, one indicator that appears in this volume shows the extent to which students with disabilities are included in regular classrooms for instructional purposes.

School choice provides parents with the opportunity to choose a school for their children beyond the assigned school. Parents may choose a private school, they may live in a district that offers choice among public schools, or they may select a school by moving into that school's community. An indicator on the Web examines parental choice of charter schools. An indicator in this volume profiles the characteristics of public charter schools.

Teachers are critical to the learning process in schools. One indicator in this volume examines the characteristics of full-time teachers by various individual and professional characteristics. An indicator on the Web examines the rates at which recent college graduates become elementary or secondary teachers.

The fifth subsection considers the climate for learning, which is shaped by different factors in the school environment, including parent, teacher, and student attitudes; school staff and leadership; and students' sense of physical security and freedom from violence. Indicators in this volume present measures of the last two factors.

The final subsection details financial support for education. Fundamentally, these financial sources of support are either private, in which individuals decide how much they are willing to pay for education, or public, in which case the decisions are made by citizens through their governments. In this subsection of The Condition of Education, the primary focus is on describing the forms and amounts of financial support to education from public and private sources, how those funds are distributed among different types of schools, and on what they are spent. Among the indicators in this volume of The Condition of Education are indicators on variations in expenditures per student and trends in expenditures per student in elementary and secondary education.

The indicators on contexts of elementary and secondary schooling from previous editions of The Condition of Education, which are not included in this volume, are available at http:// nces.ed.gov/programs/coe/list/i4.asp.

## Learning Opportunities Afterschool Activities

In 2005, a greater percentage of female than male students in kindergarten through 8th grade were involved in arts, clubs, community service, religious activities, and scouts after school, but the pattern of participation was reversed for sports.

This indicator looks at kindergarten through 8th grade (grades $\mathrm{K}-8$ ) students' participation in various afterschool activities in 2005. Parents whose children were in grades $\mathrm{K}-8$ were asked whether their children had participated in each of a series of specific activities (either primarily for supervision ${ }^{1}$ or enrichment) outside of school hours since the beginning of the school year.

In 2005, among all students in grades $\mathrm{K}-8$, some 43 percent of students participated in at least one activity. Of these students, 31 percent participated in sports, 20 percent in religious activities, 18 pecent in arts (e.g., music, dance, or painting), 10 percent in scouts, 8 percent in community service, 7 percent in academic activities (e.g., tutoring, mathematics laboratory), and 6 percent in clubs (e.g., yearbook, debate, or book club) (see supplemental table 29-1).

Rates of participation varied by poverty, sex, and parents' education. A greater percentage of students from nonpoor families ( 56 percent)
than from near-poor (30 percent) and poor (22 percent) families participated in at least one activity. In addition, students from nonpoor families were more likely to participate in each of the seven specific activities than students from near-poor and poor families. Females were more likely than males to participate in at least one activity ( 45 vs. 42 percent). By activity, a greater percentage of females than males were involved in arts ( 24 vs. 12 percent), clubs ( 7 vs . 5 percent), community service ( 9 vs. 7 percent), religious activities ( 21 vs. 18 percent), and scouts ( 11 vs. 9 percent). However, a greater percentage of males than females participated in sports ( 34 vs. 28 percent). Students whose parents had a bachelor's degree or higher were more likely to participate in at least one afterschool activity than students whose parents had some college or less. In addition, students whose parents had a graduate or professional degree were more likely to participate in each of the seven specific activities than students whose parents had some college or less.

AFTERSCHOOL ACTIVITIES:Percentage of kindergarten through 8th-grade students who participated in various afterschool activities since the beginning of the school year, by sex: 2005

${ }^{1}$ In some cases, children participate in afterschool activities not only for enjoyment or enrichment; they also participate so that their parents, who are often working, can be assured that their children are being supervised by adults in a safe setting.
NOTE: When asked about their children's participation in a series of afterschool activities since the beginning of the year, parents could respond either "yes" or "no" to whether their child participated in each specific activity. The percentage of parents who responded "yes" for each activity is shown.

Supplemental Table 29-1

## Learning Opportunities

# Student/Teacher Ratios in Public Elementary and Secondary Schools 

Student/teacher ratios tend to be higher in public schools with larger enrollments than in public schools with smaller enrollments.

Regular schools include all schools except special education schools, vocational schools,and alternative schools.

NOTE: Student/teacher ratios do not provide a direct measure of class size. The ratio is determined by dividing the total number of full-time-equivalent teachers into the total student enrollment. These teachers include classroom teachers; prekindergarten teachers in some elementary schools; art, music, and physical education teachers; and teachers who do not teach regular classes every period of the day.This analysis excludes schools that did not report both enrollment and teacher data.

SOURCE:U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD),"Public Elementary/Secondary School Universe Survey," 1990-91 through 2004-05.

FOR MORE INFORMATION:
Supplemental Note 3
Supplemental Table 30-1

The ratio of students to teachers, which is sometimes used as a proxy measure for class size, declined between 1990 and 2004 from 17.6 to 16.3 students per teacher for all regular ${ }^{1}$ public elementary, secondary, and combined schools (see supplemental table 30-1). The patterns are different, however, when public elementary, secondary, and combined schools are examined separately.

The student/teacher ratio for regular public elementary schools declined from 1990 through 2004 (from 18.2 to 16.0), with most of the decline occurring after 1996. Generally, elementary schools in each enrollment category showed similar patterns except in the largest schools (1,500 students or greater), where the student/teacher ratio increased from 19.9 to 20.5 students per teacher.

In contrast, student/teacher ratios for all regular public secondary schools increased between 1990 and 1996 (from 16.7 to 17.6) and then
declined to 16.9 in 2004. Secondary schools in each enrollment category showed similar patterns.

In regular public combined schools (that include both elementary and secondary grades), student/teacher ratios were lower in 2004 (15.2) than in 1990 (15.8). This change was consistent in all but the largest schools, where the ratio rose to 19.4 in 2004.

In every year from 1990 through 2004, the student/teacher ratio was positively associated with the enrollment for elementary, secondary, and combined regular public schools: the student/teacher ratio for any given enrollment category was always larger than that of any smaller enrollment category. For example, in 2004, regular elementary schools with over 1,500 students enrolled 6.8 more students per teacher, on average, than regular elementary schools with enrollments under 300.

# Special Programs Inclusion of Students With Disabilities in General Classrooms 

Approximately half of all students with disabilities in 2004-05 spent 80 percent or more of their day in a general classroom.

The Individuals with Disabilities Education Act (IDEA), enacted in $1975,{ }^{1}$ requires public schools to make available to all eligible children with disabilities a free public education in the least restrictive environment ${ }^{2}$ appropriate for their needs. In 1997, Congress passed amendments to IDEA, ${ }^{3}$ mandating for the first time that states collect data on the race/ethnicity of students identified as having special education needs. These data reveal an overrepresentation of some racial/ethnic minorities among students with disabilities (see indicator 7).

Between 1995 and 2005, the percentage of students with disabilities spending 80 percent or more of the school day in a general classroom showed an overall increase from 45 to 52 percent (see supplemental table 31-1). At the same time, there was an overall decline (from 22 to 18 percent) in the percentage of students with disabilities spending less than 40 percent of their day in a general classroom. The percentage of students with disabilities who did not attend general schools showed little change, however, staying at approximately 4 percent
over the 10 -year span. Between the 2003-04 and 2004-05 school years, the percentage of students with disabilities spending 80 percent or more of the school day in a general classroom increased from 50 to 52 percent.

The percentage of time these students spent in a general classroom varied by race/ethnicity (see supplemental table 31-2). For example, White students with disabilities were more likely than students of any other race/ethnicity to spend 80 percent or more of their day in a general classroom. In contrast, Black students with disabilities were more likely than students of any other race/ethnicity to spend less than 40 percent of their day in a general classroom and were the most likely to receive education in a separate school facility for students with disabilities. American Indians/Alaska Natives and Hispanics with disabilities were less likely than students of any other race/ethnicity to receive education in a separate school facility for students with disabilities.

STUDENTS WITH DISABILITIES:Percentage distribution of students ages 6-21 served by the Individuals with Disabilities Education Act, by race/ethnicity and placement in educational environment: 2004-05
${ }^{1}$ The most recent reauthorization of the Individuals with Disabilities Education Act (IDEA) occurred in 2004.
${ }^{2}$ A least restrictive environment is determined on a case-by-case basis to ensure that each student's special needs are met, while allowing that student the maximum possible exposure to students without disabilities as well as the general education curriculum.
${ }^{3}$ Individuals with Disabilities Education Act (IDEA) Amendments of 1997 (P.L. 105-17).
NOTE:Students with disabilities are those students served under "Assistance for education of all children with disabilities" (Part B) of the IDEA in the United States and outlying areas. See supplemental note 8 for further information on student disabilities. Race categories exclude persons of Hispanic ethnicity.Data are taken from a universe survey. Detail may not sum to totals because of rounding.

## School Choice

> Charter schools are more likely than conventional public schools to be located in urban areas, to have smaller total enrollment sizes, and to enroll higher proportions of Black, Hispanic, and American Indian/Alaska Native students.

NOTE: These tabulations exclude schools with no charter status designation and those not reporting membership. Race categories exclude persons of Hispanic ethnicity. See supplemental note 3 for the states included in each region and information on location. Detail may not sum to totals because of rounding.

(i)

FOR MORE INFORMATION:
Supplemental Notes 1,3
Supplemental Table 32-1
U.S. Department of

Education 2000

A charter school is a publicly funded school that is typically governed by a group or organization under a contract or charter with the state; the charter exempts the school from selected state or local rules and regulations. In return for funding and autonomy, the charter school must meet accountability standards. A school's charter is reviewed (typically every 3 to 5 years) and can be revoked if guidelines on curriculum and management are not followed or the standards are not met (U.S. Department of Education 2000).

In the 2004-05 school year, there were 3,294 charter schools in the jurisdictions that allowed them ( 40 states and the District of Columbia), compared with 90,001 conventional public schools in all of the United States (see supplemental table 32-1). Charter schools made up 4 percent of all public schools. The population of students served by charter schools differed from the student population served by conventional public schools. Charter schools enrolled larger percentages of Black, Hispanic, and American Indian/Alaska Native students and lower percentages of White and Asian/Pacific Islander
students than conventional public schools. A larger percentage of charter schools (27 percent) than conventional public schools (16 percent) had less than 15 percent of students eligible for free or reduced-price lunch.

Student enrollments in charter schools were lower than enrollments in conventional public schools. Seventy-one percent of charter schools had enrollments of less than 300 students, compared with 31 percent of conventional public schools. Charter schools were also more likely to be located in central cities than were conventional public schools (52 vs. 25 percent).

Charter schools were more likely to be located in the West (39 percent) than in the Midwest ( 27 percent), South ( 25 percent), and the Northeast ( 9 percent). In addition, a greater percentage of charter schools ( 24 percent) than conventional schools ( 19 percent) were secondary schools, while a larger percentage of conventional schools (57 and 18 percent) than charter schools ( 44 and 9 percent) were elementary and middle schools, respectively.

## Teachers

# Characteristics of Full-Time School Teachers 

#### Abstract

In 2003-04, the percentages of full-time teachers in the United States who were under age 30 and between ages 50-59 were higher than the percentages of these categories of teachers in 1993-94.

The number of full-time teachers in the United States was higher in 2003-04 than in 1993-94 (3.3 vs. 2.6 million) (see supplemental table 33-1). This indicator examines the distribution of these teachers in elementary and secondary schools by sex, race/ethnicity, age, and certification status.

Overall, the percentage of full-time teachers who were female remained between 73 and 75 percent in the three survey years between 1993-94 and 2003-04. In each year, females were notably more likely than males to teach in both public and private elementary schools. At the secondary level, however, differences by sex were less prominent for schools of both types. For example, in 2003-04, some 44 percent of secondary school teachers were male, whereas 56 percent were female.

The percentage of full-time teachers who were racial/ethnic minorities was higher in 2003-04 than in 1993-94 (17 vs. 13 percent). In 1993-94 and 19992000, greater percentages of elementary school than secondary school teachers were minorities; however, in 2003-04, there were no measurable differences in the percentages of teachers by race/ethnicity at either school level. In each survey year, the percentages of
minority teachers at both levels were greater at public schools than at private schools.

The percentage of full-time teachers under age 30 was higher in 1999-2000 than in 1993-94 (18 vs. 12 percent) and remained at about that percentage in 2003-04. In the first two survey years, private schools employed greater percentages of teachers under age 30 than did public schools. In 2003-04, this pattern continued for secondary schools, but there was no measurable difference by school type for elementary schools. The percentage of teachers ages 50-59 was higher in 2003-04 than in 1993-94 ( 29 vs. 21 percent); however, no measurable differences were found for teachers age 60 and over between these years.

The percentage of full-time teachers with a regular certification ${ }^{1}$ was lower in 2003-04 than in 1993-94 (83 vs. 91 percent), while the percentages with other types of certifications were each higher in 2003-04 than in 1993-94 (see supplemental table 33-2). In each year, private school teachers at both levels were less likely to hold a regular certification than public school teachers. For example, in 2003-04, some 87 percent of public secondary school teachers had a regular certification compared with 43 percent of their private school peers.

TEACHERS: Percentage distribution of full-time teachers, by age: School years 1993-94, 1999-2000, and 2003-04

${ }^{1}$ The Regular certification category includes regular or standard state certificates and advanced professional certificates (for both public and private school teachers) and full certificates granted by an accrediting or certifying body other than the state (for private school teachers only). Provisional certificates are for those who are still participating in an "alternative certification program." Probationary certificates are for those who have satisfied all requirements except the completion of a probationary period. Temporary certificates are for those who require additional college coursework and/or student teaching. Emergency certificates or waivers are for those with insufficient teacher preparation who must complete a regular certification program in order to continue teaching.

NOTE: Detail may not sum to totals because of rounding. See supplemental note 3 for more information on the Schools and Staffing Survey (SASS).

# School Characteristics and Climate 

# Characteristics of School Principals 

## Between 1993-94 and 2003-04, the percentage of public school principals who were female increased from 41 to 56 percent in elementary schools and from 14 to 26 percent in secondary schools.

NOTE: Data are only for principals, not assistant principals. Principals from Bureau of Indian Affairs schools were excluded from the analysis. Detail may not sum to totals because of rounding. See supplemental note 3 for more information on the Schools and Staffing Survey (SASS).

Grubb and Flessa 2006
Tucker and Codding 2002
Indicator 33

This indicator looks at the distribution of school principals between school years 1993-94 and 2003-04 by various demographic and professional characteristics. During this period, the number of principals in the United States increased from 104,600 to 115,000 (see supplemental table 34-1).

There were changes in the distribution of principals by sex and age between 1993-94 and 2003-04. The percentages of female principals in public schools increased during this time, but there were no measurable differences in the percentages of female principals in private schools. In public schools, the percentage of female principals increased from 41 to 56 percent in elementary and from 14 to 26 percent in secondary schools. In private schools, the percentage of female principals remained around 68 percent in elementary and about 34 percent in secondary schools. Additionally, the percentage of principals ages 55 and over increased between 1993-94 and 2003-04, from 20 to 31 percent. This increase was particularly evident at the secondary levelthe percentage of secondary school principals who were ages 55 and over increased from 17 to

30 percent in public schools and from 22 to 46 percent in private schools.

The percentage of principals who had 3 or fewer years of teaching experience prior to becoming a principal was not measurably different in 200304 than in 1993-94 (11 percent), but the percentage with 20 or more years of teaching experience prior to becoming a principal increased from 10 to 18 percent (see supplemental table 34-2). In each year surveyed, the percentage of private school principals with 3 or fewer years of teaching experience prior to becoming a principal was twice the percentage for public school principals.

Principals' average annual salary, measured in 2003-04 constant dollars, increased by 10 percent, from $\$ 62,200$ in 1993-94 to $\$ 68,900$ in 2003-04. In each year surveyed, public school principals were paid, on average, more than private school principals. In 2003-04, some 50 percent of public elementary and 56 percent of public secondary school principals earned $\$ 75,000$ or more, compared with 9 percent of private elementary and 28 percent of private secondary school principals

PRINCIPALS: Percentage distribution of male and female elementary and secondary school principals, by school level and school type: School years 1993-94, 1999-2000, and 2003-04

# School Characteristics and Climate Student Support Staff in Public Schools 

In 2003-04, nearly all elementary and secondary schools had student support staff,
with most employed full time.

In addition to employing teachers, most schools employ staff who work directly with students and provide various support services. These student support staff, who include licensed or certified professionals (e.g., school counselors, social workers, and speech therapists) and teacher aides (e.g., special education, regular Title I, and library aides), constituted 27 percent of all public school staff in the 2003-04 school year (see supplemental table 35-1). This indicator examines the distribution of these staff in regular public schools in the 2003-04 school year.

About 857,000 support staff worked in elementary schools and 217,000 worked in secondary schools in 2003-04. Nearly all elementary and secondary schools reported having student support staff (99 and 100 percent, respectively), with a greater number employed full time than part time. In terms of licensed or certified professionals, over two-thirds of elementary and secondary schools reported having school counselors, having nurses, and having speech therapists. In terms of teacher aides, 80 percent of elementary schools and 81 percent of secondary schools reported having special education instructional aides. On
average, elementary schools had a lower number of students per all student support staff than secondary schools ( 33 vs. 62 percent). Elementary schools had a lower number of students per staff than secondary schools in each category of support staff except school counselors.

The number, percentage, and availability of student support staff varied by schools that were low poverty when compared with those schools that were high poverty (see supplemental table 35-2). A greater percentage of low-poverty schools than high-poverty schools had psychologists, had special education noninstructional aides, and had library instructional and noninstructional aides. In contrast, a greater percentage of high-poverty schools than low-poverty schools had regular Title I (61 vs. 16 percent) and ESL/ bilingual ( 41 vs. 29 percent) instructional aides. With the exception of school counselors, the average number of students per licensed or certified professional (nurses, social workers, psychologists, speech therapists, and other professionals) was smaller in high-poverty schools than in low-poverty schools.

STUDENT SUPPORT STAFF: Percentage of regular public schools with various student support staff, by school level: School year 2003-04

NOTE: Data are for full- and part-time staff. Regular public schools do not include alternative, special education, special program emphasis, or vocational/technical schools. Data for combined elementary and secondary schools and for ungraded schools are excluded. Detail may not sum to totals because of rounding.

ing, on school property, or on the way to and from school.
SOURCE:Dinkes, R., Cataldi,E.F., Kena, G., and Baum, K. (2006). Indicators of School Crime and Safety: 2006 (NCES 2007-003/NCJ 214262), table 2.1, data from U.S. Department of Justice, Bureau of Justice Statistics, School Crime Supplement (SCS) to the National Crime Victimization Survey (NCVS), 1992-2004.

Theft and violence that occur at school ${ }^{1}$ can lead to a disruptive and threatening environment, physical injury, and emotional stress (Elliot, Hamburg, and Williams 1998). To measure the frequency of theft and violence in our nation's schools, this indicator examines nonfatal crime rates per 1,000 students, ages 12-18, from 1992 through 2004. Nonfatal crime includes theft and all violent crime; all violent crime includes serious violent crimes (rape, sexual assault, robbery, and aggravated assault) and simple assault.

From 1992 through 2004, the rate of nonfatal crime against students at school declined 62 percent (from 144 to 55 crimes per 1,000 students) (see supplemental table 36-1). During the same time period, the rate of crimes against students at school declined 65 percent for theft (from 95 to 33 crimes per 1,000 students) and 54 percent for violent crimes (from 48 to 22 crimes per 1,000 students). Between 2003 and 2004, the rate of nonfatal crime against students ages 12-18 at school declined 25 percent (from 73 to 55 crimes per 1,000 students). The rate of thefts against students at school

TRENDS IN VICTIMIZATION: Rate of nonfatal crime against students ages 12-18 at school or on the way to or from school
declined 27 percent during the same time period (from 45 to 33 crimes per 1,000 students).

From 1992 through 2004, the rates for serious violent crime were lower when students were at school than when they were away from school. However, students were generally more likely to be victims of theft at school than away from school.

In 2004, a higher percentage of middle schoolage students (ages 12-14) than high school-age students (ages 15-18) were victims of crime at school ( 64 vs. 46 crimes per 1,000 students) (see supplemental table 36-2). In contrast, middle school-age students were less likely to be victims of crime away from school than were high school-age students ( 34 vs. 61 crimes per 1,000 students). Differences were also found by students' household location. The rates of violent crime at school were higher for urban students than for suburban students. Furthermore, rates of violent crime away from school, especially serious violent crime, were also higher for urban students than suburban students. However, rural students experienced higher rates of theft away from school than urban or suburban students.
per 1,000 students, by type of crime: 1992-2004

## Finance

Changes in Sources of Public School Revenue
Federal and state revenues increased at a faster rate than local revenues
from 1989-90 to 2003-04.

From 1989-90 to 2003-04, total elementary and secondary public school revenues increased 51 percent in constant dollars. During this period, the total amount from each revenue source (federal, state, and local) increased, though not at the same rate (see supplemental table 37-1). Federal and state revenues increased at a faster rate than all local revenues (both property tax revenue and other local revenue). The proportion of total revenue for public elementary and secondary education from local sources declined, from 47 percent in 1989-90 to 44 percent in 2003-04, while the proportion of total revenue flowing to public schools from federal sources increased from 6 percent in 1989-90 to 9 percent in 2003-04 (see supplemental table 37-2). The proportion from state sources was the same in 1989-90 as in 2003-04 (47 percent).

Although total revenues for elementary and secondary public schools increased in each region, different regional patterns of change in the distribution of public school revenues are evident. The Midwest experienced the largest decreases in the proportion of total revenue from local sources: local funding there dropped from 55 percent of all revenue for public elementary and secondary
education in 1989-90 to 44 percent in 2003-04. Declines in the proportion of property tax revenue accounted for most of this decrease. ${ }^{1}$ The Northeast also experienced declines in the proportion of revenue from local sources. In both regions, there were increases in the proportion of total revenue from federal and state sources.

The proportion of total revenue from local sources increased in the West from 33 to 35 percent during this period. While that proportion experienced little change in the South (less than 1 percentage point), the proportion of total revenue from property taxes increased 4 percent. In both the South and the West, the proportion of revenue from state sources decreased, and the proportion from federal sources increased.

In 2003-04, as in earlier years, the Northeast relied to a greater degree on property tax revenues than the other regions. The difference in the reliance on property tax revenues between the Northeast and the Midwest was greater in 2003-04 than in 1989-90. Conversely, the differences between the Northeast and the other two regions were less in 2003-04 than in 1989-90.

CHANGES IN REVENUE SOURCES: Percentage distribution of total revenue for public elementary and secondary schools, by region and revenue source: 1989-90 to 2003-04

${ }^{1}$ There was a decline in the property tax in Michigan from 1993-94 to 1994-95. During that period, the proportion of total revenue from property taxes fell from 59 to 21 percent in Michigan and from 46 to 39 percent for all the Midwest.
NOTE: Detail may not sum to totals because of rounding. Revenues have been adjusted for the effects of inflation using the Consumer Price Index (CPI) and are in constant 2003-04 dollars. Other local government revenue includes revenue from such sources as local nonproperty taxes, investments, and revenue from student activities, textbook sales, transportation and tuition fees, and food services. Property tax revenue and other local government revenues were imputed for Texas for 1992-93. See supplemental note 11 for information about revenue for public elementary and secondary schools. Estimates are revised from previous publications.

Supplemental Tables 37-1, 37-2

# Expenditures in Public Elementary and Secondary Schools by Expenditure Category 

Expenditures per student rose 27 percent in constant dollars from 1989-90 to 2003-04, with capital expenditures increasing the fastest.
${ }^{1}$ Other expenditures include funds for student support, other instructional staff, student transportation, other support services, food services, and enterprise operations, all of which are components of current expenditures. Also included in other expenditures are funds for adult education, community colleges, private school programs funded by local and state education agencies, and community services.
NOTE: Detail may not sum to totals because of rounding. Expenditures have been adjusted for the effects of inflation using the Consumer Price Index (CPI) and are in constant 2003-04 dollars. See supplemental note 11 for information about this index and about classifications of expenditures for elementary and secondary education. See supplemental note 1 for information on regional categorizations.
SOURCE:U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD),"National Public Education Financial Survey," 1989-90 through 2003-04.

FOR MORE INFORMATION:
Supplemental Notes 1,3,11
Supplemental Table 38-1

This indicator examines expenditures per student in public elementary and secondary schools, in constant dollars, by major expenditure category and region between 1989-90 and 2003-04. Total expenditures include current expenditures, such as instruction, administration, operation and maintenance, as well as capital outlay and interest on school debt. Total expenditures per student are calculated by dividing total expenditures by the enrollment.

Total expenditures per student rose 27 percent in constant dollars between 1989-90 and 2003-04, from $\$ 7,692$ to $\$ 9,762$ (see supplemental table 38-1). This rate of increase in total expenditures was not evenly distributed among the major categories of expenditures. Among the five major categories of expenditures, the percentage change in spending on capital outlay and interest increased the most ( 68 percent). In contrast, instruction expenditures increased 24 percent, spending on operation and maintenance increased 9 percent, and spending on administration increased 8 percent.

In 2003-04, some 52 percent of the $\$ 9,762$ spent per student in public elementary and secondary schools went toward instruction expenditures such as teacher salaries and benefits. About 13 percent went toward capital expenditures, 8 percent toward operation and maintenance, 7 percent toward administration, and 20 percent toward other expenditures, including transportation, food services, and student support. ${ }^{1}$

Looking at total expenditures per student by region in 2003-04 reveals that expenditures per student were highest in the Northeast, followed by the Midwest, West, and South. This regional pattern held true for each major expenditure category except capital expenditures, which were highest in the West. A higher percentage of total expenditures went toward instruction in the Northeast ( 57 percent) than in the other regions ( 50 to 52 percent). However, in the Northeast, a smaller percentage of total expenditures ( 10 percent) went toward capital expenditures than in the other regions ( 14 to 16 percent).

EXPENDITURES BY CATEGORY: Total expenditures per student in fall enrollment in public elementary and secondary schools, by expenditure category: 1989-90 through 2003-04

## Finance

# Variations in Instruction Expenditures per Student 

## Between 1989-90 and 2003-04, differences between states accounted for a greater proportion of the variation in instruction expenditures per student among unified public school districts than did differences within states.

A number of methods can be used to measure the variation in the amount school districts spend per student on instruction. This indicator uses the Theil coefficient because it provides a national measure of differences in instruction expenditures per student that can be decomposed into separate components to measure school district-level variations both between and within states. In this indicator, a coefficient of zero indicates that there is no variation in the instruction expenditures per student in unified public school districts for kindergarten through grade 12 , and the amount of variation present increases as the Theil coefficient increases in size.

Across U.S. districts, most of the variation in instruction expenditures is due to differences between states, rather than differences within states (see supplemental table 39-1). Between 1989-90 and 1997-98, the size of the variation decreased, and although the variation has increased in size since the late 1990s, it remains lower than in the early 1990s. As was the case for the total variation, when the variations due to between- and within-state differences
are considered separately, both components showed decreases between 1989-90 and 1997-98. However, since 1997-98, the trends have changed. The between-state component increased, while the within-state component remained largely unchanged, with the betweenstate variation accounting for 74 percent of the total variation in 1997-98 and 78 percent in 2003-04. Hence, the increase in the total variation between 1997-98 and 2003-04 was largely due to increases in the variation between states.

Changes in the variation in instruction expenditures over time may reflect differences across school districts in the trends in the amount of services or goods purchased, such as the number of classroom teachers hired. However, they may also be attributed to differences in the trends in the cost of items purchased, such as teacher salaries. The variations over time in the amount of services or goods purchased may, in part, reflect various state litigation and school finance reform efforts. Further, some of the variations in expenditures per pupil across states may be due to cost differences across states.

VARIATIONS IN EXPENDITURES:Variation in instruction expenditures in unified public elementary and secondary school districts, by source of variation: 1989-90 to 2003-04

${ }^{1}$ The Theil coefficient measures variation for groups within a set (i.e.,states within the country) and indicates relative variation over time. See supplemental note 11 for more information.
NOTE: Public elementary and secondary unified districts are those districts that serve both elementary and secondary grades. In 2003-04, approximately 71 percent of all school districts were unified school districts.

# Public Elementary and Secondary Expenditures by District Poverty 

Total expenditures per student in 2003-04 were highest in low-poverty school districts and next highest in high-poverty school districts.

Total expenditures include all expenditures allocable to per student costs-current expenditures for regular school programs, capital outlay, and interest on school debt. All expenditures in this indicator are in constant 2003-04 dollars. The Consumer Price Index (CPI) was used to adjust expenditures into constant dollars. See supplemental note 11 for information on the CPI and classifications of expenditures.
NOTE: See supplemental note 7 for further information on poverty and community types. Regular districts include elementary/secondary combined districts and separate elementary or secondary districts. They exclude Department of Defense districts and Bureau of Indian Affairs districts.
SOURCE: U.S. Department of Commerce, Census Bureau,"Small Area Income \& Poverty Estimates," 1995-96,1997-98, and 1999-2000 to 2003-04; and U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "School District Finance Survey (Form F-33)," 1995-96, 1997-98, and 1999-2000 to 2003-04.

FOR MORE INFORMATION:
Supplemental Notes 1,3,11
Supplemental Tables 40-1, 40-2,40-3

Expenditures per student in public elementary and secondary schools vary by the level of poverty in a district. For example, in 2003-04, total expenditures per student were highest in low-poverty districts ( $\$ 10,857$ ), next highest in high-poverty districts ( $\$ 10,377$ ), and lowest in middle- and middle-high poverty districts (\$9,042 and \$9,045, respectively) (see supplemental table 40-1). ${ }^{1}$ Districts were divided into five equal-sized groups based on the percentage of 5- to 17-year-olds in poverty. The low-poverty district category consists of the 20 percent of students in districts with the lowest percentages of poor school-age children. Conversely, the high-poverty district category consists of the 20 percent of students in districts with the highest percentages of poor school-age children.

Between 1995-96 and 2003-04, total expenditures per student increased by 24 percent in constant dollars, from $\$ 7,847$ to $\$ 9,754$. Total expenditures per student increased the most for the high-poverty districts ( 28 percent), and the least for low-poverty districts ( 21 percent).

Expenditures in the other three categories increased between 22 and 27 percent.

Current expenditures, which include instructional, administrative, and operation and maintenance expenditures, followed a similar pattern as total expenditures. For example, the low- and high-poverty districts had the highest current expenditures per student in 2003-04 (see supplemental table 40-2). However, unlike total expenditures, current expenditures in high-poverty and low-poverty districts were about the same ( $\$ 8,858$ and $\$ 8,832$, respectively).

The types of communities in which low- and high-poverty school districts were located differed. For example, 69 percent of students in low-poverty districts were enrolled in the suburbs, while 10 percent of the students in low-poverty districts were in cities (see supplemental table 40-3). In contrast, 69 percent of the students in high-poverty districts were in cities, while the suburbs enrolled 6 percent.

TOTAL EXPENDITURES PER STUDENT: Public school district expenditures per student, by district poverty level: Various years, 1995-96 to 2003-04

## Finance

# International Comparisons of Expenditures for Education 

At the postsecondary level in 2003, U.S. expenditures per student were $\$ 24,074$, higher than the OECD average of $\$ 11,254$.

Two measures commonly used to compare countries' investments in education are expenditures per student from both public and private sources and total expenditures as a percentage of gross domestic product (GDP). The latter measure allows a comparison of countries' expenditures relative to their ability to finance education. Private sources include payments from households for school-based expenses such as tuition, transportation fees, book rentals, or food services, as well as funds raised by institutions through endowments or returns on investment.

In 2003, expenditures per student for the United States were $\$ 8,935$ at the combined elementary and secondary level, which was higher than the average of $\$ 6,278$ for the member countries of the Organization for Economic Cooperation and Development (OECD) reporting data (see supplemental table 41-1). At the postsecondary level, U.S. expenditures per student were $\$ 24,074$, higher than the OECD average of $\$ 11,254$. Expenditures per student varied widely across the OECD countries, ranging from $\$ 986$ (Turkey) to \$13,621 (Luxembourg) at the combined elementary and secondary level
and from \$4,589 (Poland) to \$25,900 (Switzerland) at the postsecondary level.

A country's wealth (defined as GDP per capita) was positively associated with expenditures per student on education at the elementary/ secondary and postsecondary levels. In 2003, the United States and Korea spent the highest percentage of their GDP on total education expenditures ${ }^{1}$ ( 7.0 percent) among the OECD countries reporting data. Looking at education expenditures by level, the United States spent 4.2 percent of its GDP on elementary and secondary education, higher than the average of 3.9 percent for all OECD countries reporting data. Compared with the United States, 10 countries spent a higher percentage of their GDP on elementary and secondary education, and 16 countries spent a lower proportion on education. At the postsecondary level, 2.9 percent of the GDP of the United States was spent on education expenditures, higher than the average of 1.4 percent for all OECD countries reporting data. The United States spent a greater percentage of its GDP on postsecondary education than all other OECD countries reporting data.

Total education expenditures include expenditures at the elementary/secondary, postsecondary, and postsecondary nontertiary levels.
NOTE: Per student expenditures are based on public and private full-time-equivalent (FTE) enrollment figures and on current expenditures and capital outlays from both public and private sources where data are available. Purchasing power parity (PPP) indices are used to convert other currencies to U.S. dollars (i.e., absolute terms). Within-country consumer price indices are used to adjust the PPP indices to account for inflation because the fiscal year has a different starting date in different countries. Luxembourg data are excluded from the graphs because of anomalies with respect to their GDP per capita data (large revenues from international finance institutions distort the wealth of the population). The OECD average for GDP per capita for each graph is based on the number of countries with data available ( 30 for first graph; 28 for second graph; 27 for third graph)

# Introduction: Contexts of Postsecondary Education 

The indicators in this section of The Condition of Education examine features of postsecondary education, many of which parallel those presented in the previous section on elementary and secondary education. There are 19 indicators in this section: 7, prepared for this year's volume, appear on the following pages, and all 19, including indicators from previous years, are on the Web (see Website Contents on the facing page for a full list of the indicators).

Postsecondary education is characterized by diversity in both the types of institutions and characteristics of the students. Postsecondary institutions vary in terms of the types of degrees awarded, control (public or private), and whether they are operated on a not-forprofit or for-profit basis. Beyond these basic differences, postsecondary institutions have distinctly different missions and provide a wide range of learning environments. For example, some institutions are research universities with graduate programs, while others focus on undergraduate education; some have a religious affiliation, while others do not; and some have selective entrance policies, while others have more open admissions. The student bodies of postsecondary institutions are diverse in other ways as well. For example, many students hold down jobs and regard themselves as employees first and students second; many delay entry into postsecondary education rather than enroll immediately after high school; and a sizable number come from foreign countries. Indicators in The Condition of Education measure these and other dimensions of diversity that are fundamental to the character of postsecondary education.

One important feature of postsecondary education is the courses and programs of study that students take. Data on degree recipients show
trends in the fields of study for undergraduate and graduate degree recipients. In addition, one indicator in this volume compares the distribution of postsecondary degrees awarded in the United States by fields of study with that in other countries.

Measures of students enrolled and working are included in this volume. Indicators on the Web also present information on distance education courses taught by faculty and the provision of and participation in remedial education.

Like elementary and secondary education, postsecondary institutions provide special support and accommodations for special populations of students. One indicator on the Web measures the services and accommodations for students with disabilities in postsecondary education.

Faculty are a critical resource for colleges and universities. They teach students, conduct research, and serve their institutions and communities. One indicator in The Condition of Education examines trends in faculty salaries and benefits at different levels and across types of institutions.

Finally, The Condition of Education examines financial support for education. Indicators in this year's volume show the availability of federal grants and loans as well as the total and net access price (the total price minus grants and loans) of attending a college or university. Additional indicators on the Web show the institutional aid available to students and the debt burden of college graduates.

The indicators on the contexts of postsecondary education from previous editions of The Condition of Education, which are not included in this volume, are available at http://nces. ed.gov/programs/coe/list/i5.asp.

# Programs and Courses Fields of Study 

#### Abstract

In 2004-05, business degrees made up 16 percent of all degrees awarded at the associate's degree level, 22 percent of degrees awarded at the bachelor's degree level, and 25 percent of degrees awarded at the master's degree level.

Although there are over 20 major fields of study at each of the associate's, bachelor's, master's, and doctoral levels, more than half of the postsecondary degrees awarded are concentrated in a relatively small number of fields. This indicator examines the most common fields at each postsecondary degree level in academic years 1990-91, 1997-98, and 2004-05 as well as changes over time.

In each of these years, between 63 and 68 percent of associate's degrees were awarded in liberal arts and sciences, general studies, and humanities; health professions and related clinical sciences; and business (see supplemental table 42-1). In 2004-05, these three fields, along with engineering and engineering technologies (8 percent) and computer and information sciences ( 5 percent), made up 81 percent of the associate's degrees awarded.

In each of these years, between 50 and 54 percent of bachelor's degrees were awarded in business, social sciences and history, education, psychology, and visual and performing arts (see supplemental table 42-2). In 2004-05, these five fields, along with health professions and related clinical sciences; engineering and engineering technologies; communications, journalism and related programs; and biological and biomedical sciences (each between 5 and 6 percent of all bachelor's degrees awarded), made up 72 percent of the bachelor's degrees awarded.

Between 49 and 54 percent of all master's degrees were awarded in education and business in each of these years (see supplemental table 42-3). In 2004-05, these two fields, along with health professions and related clinical sciences ( 8 percent), engineering and engineering technologies ( 6 percent), and public administration and social services ( 5 percent), made up 73 percent of the master's degrees awarded.

In each of these years, between 31 and 38 percent of all doctoral degrees were awarded in education, engineering and engineering technologies, and health professions and related clinical sciences. In 2004-05, these three fields, along with biological and biomedical sciences ( 11 percent), psychology (10 percent), physical sciences and science technologies ( 8 percent), and social sciences and history ( 7 percent), made up 74 percent of the doctoral degrees awarded.

Between 50 and 53 percent of first-professional degrees were awarded in law in each of these years. In 2004-05, medicine made up an additional 18 percent and dentistry an additional 5 percent of all first-professional degrees awarded.

At most degree levels, notable changes occurred in certain fields in recent years (see supplemental tables 42-1, 42-2, and 42-3). Between 1997-98 and 2004-05, the field of computer and information sciences grew by nearly 100 percent at the associate's level (compared with a 25 percent overall growth in associate's degrees), and by 57 percent at the master's level (compared with a 34 percent overall growth in master's degrees). At the doctoral level, the field of health professions and related clinical sciences grew by nearly 200 percent between 1997-98 and 2004-05, compared with a 14 percent overall growth in doctoral degrees.

Other common fields experienced little or no growth between 1997-98 and 2004-05. The field of engineering and engineering technologies, for example, saw a slight decrease in the number of degrees granted at the associate's level and experienced no change at the bachelor's level in recent years. While the field of education has also been predominant at the bachelor's level, there was no increase in the number of degrees awarded in this field during this period. At the first-professional degree level, the field of medicine experienced virtually no growth between 1997-98 and 2004-05.

NOTE: The five most common fields of study at each degree level in academic year 2004-05 are highlighted for academic years 1990-91, 1997-98, and 2004-05; the remaining fields of study at each level are not shown.See supplemental note 10 for more information on fields of study. See supplemental note 3 for more information on the Integrated Postsecondary Education Data System (IPEDS).

FIELDS OF STUDY: Percentage of associate's, bachelor's, and master's degrees awarded by degree-granting institutions, by selected fields of study: 1990-91, 1997-98, and 2004-05

## Programs and Courses <br> <br> International Comparisons of Degrees by Field

 <br> <br> International Comparisons of Degrees by Field}
## Compared with students in other OECD countries, U.S. students are more likely to complete degrees in arts and humanities and in business, social sciences, law, and "other" fields, and less likely to complete degrees in engineering and health.

Internationally comparable data on degrees conferred at the postsecondary level have been collected through the Organization for Economic Cooperation and Development (OECD) using the International Standard Classification of Education (ISCED). This indicator presents data on academic postsecondary programs (ISCED levels 5A and 6) in 2004 corresponding to bachelor's, master's, first-professional, and doctoral degrees in the United States.

For many fields, the differences between the proportions of graduates earning postsecondary degrees in the United States and other OECD countries in 2004 were relatively small. In education, physical and biological sciences, computer science, and mathematics, the United States was within 1 percentage point of the OECD average. In contrast, the United States was 7.7 percentage points higher than the international average in business, social sciences, and other fields combined ${ }^{1}$ ( 47.7 vs. 40.0 percent), and 3.8 percentage points higher in arts and humanities combined. The U.S. proportion of degrees in business, social sciences, and other fields combined ${ }^{1}$ (47.7) was higher than
in any other reporting OECD country, except for Hungary (49.3) and Poland (66.8). Fields in which the U.S. proportion of graduates earning degrees was somewhat lower than the OECD average included health (4.1 percentage points) and engineering ( 5.8 percentage points).

While the total number of engineering degrees conferred in the United States was relatively high compared with other OECD countries, the proportion of graduates earning degrees in engineering in the United States was relatively low. The proportion of U.S. graduates earning their degrees in engineering ( 6.4 percent) in 2004 was lower than the other five Group of Eight (G-8) countries reporting data, including Canada ( 7.8 percent), France ( 12.4 percent), Italy ( 15.5 percent), Germany ( 16.5 percent), and Japan ( 20.2 percent). Compared more generally with the other 27 OECD countries reporting data, Hungary ( 6.3 percent), Iceland ( 5.6 percent), Greece ( 5.2 percent), and New Zealand (4.9 percent) had proportions lower than the United States, while the remaining 23 countries had higher proportions of graduates earning degrees in engineering.

DEGREES AWARDED: Percentage distribution of degrees conferred by field of study among reporting G-8 countries: 2004

${ }^{1}$ Includes journalism, agriculture, and services.
NOTE: Includes academic degrees conferred at International Standard Classification of Education (ISCED), levels $5 A$ and 6. These levels correspond to bachelor's, master's, first-professional, and doctoral degrees in the United States. Detail may not sum to totals because of rounding. The G-8 countries, Canada, France, Germany, Italy, Japan, the Russian Federation, the United Kingdom, and the United States, are among the world's most economically developed countries. Data for the United Kingdom and Russian Federation were not available.OECD average is computed on the basis that each country contributes equally, without respect to size of the country. See supplemental note 6 for more information on the ISCED.

## Faculty and Staff

# Faculty Salary, Benefits, and Total Compensation 

Average inflation-adjusted salaries for full-time instructional faculty increased 18 percent from 1979-80 through 2005-06; however, salaries decreased 0.3 percent between

1999-2000 and 2005-06.
${ }^{1}$ Total compensation is the sum of salary and fringe benefits. Salary does not include outside income. Fringe benefits may include, for example, retirement plans,medical/dental plans, group life insurance, or other benefits.
${ }^{2}$ Institutions in this indicator are classified based on the number of highest degrees awarded. For example, institutions that award 20 or more doctoral degrees per year are classified as doctoral universities. See supplemental note 9 for more information about classifications of postsecondary institutions.
NOTE: Full-time instructional faculty on less-than-9-month contracts were excluded. In 2005-06, there were about 3,600 of these faculty, accounting for less than 1 percent of all full-time instructional faculty at degree-granting institutions. Salaries, benefits, and compensation adjusted by the Consumer Price Index (CPI) to constant 2003-04 dollars. Detail may not sum to totals because of rounding. See supplemental note 11 for more information about the CPI. See supplemental note 3 for more information about the Integrated Postsecondary Education Data System (IPEDS).
SOURCE: U.S. Department of Education, National Center for Education Statistics, 1979-80 Higher Education General Information Survey (HEGIS), "Faculty Salaries, Tenure, and Fringe Benefits Survey"; and 2005-06 Integrated Postsecondary Education Data System (IPEDS), Fall 2005, and Winter 2005.

FOR MORE INFORMATION:
Supplemental Notes 3,9,11
Supplemental Tables 44-1, 44-2

Adjusted for inflation (in constant dollars), the average salary for full-time instructional faculty has increased by 18 percent overall during the past 25 years (see supplemental table 44-1). Average salaries were higher in 2005-06 than in 1979-80 for faculty in all academic ranks. The increase was greatest for instructors, whose average salary increased by 35 percent, then for professors, whose average salary increased by 24 percent. The average salary increased at all types of institutions as well, ranging from a low of 7 percent at public 2-year colleges to a high of 37 percent at private 4 -year doctoral universities. After increasing during the 1980s and 1990s, average salaries for faculty decreased 0.3 percent between 1999-2000 and 2005-06, after adjusting for inflation.

Fringe benefits for faculty (adjusted for inflation) have increased proportionately more than salaries since $1979-80$ ( 67 vs. 18 percent). As with salaries, faculty at private 4 -year doctoral institutions received more in benefits, on average, than their colleagues at other types of institutions. Combining salary with benefits, full-time instructional faculty across all types of institutions received a total compensation package in 2005-06 that was about 26 percent more than they had received in 1979-80.

From 1979-80 through 2005-06, the proportion of full-time instructional faculty on 11- or 12-month contracts increased from 13 to 17 percent (see supplemental table 44-2). However, their average salary and benefits increased less than those of faculty on 9- or 10month contracts ( 6 vs .20 percent for salaries; 44 vs. 71 percent for benefits).

FACULTY SALARIES: Percentage change in total compensation, average salary by academic rank and type of institution,
and fringe benefits of full-time instructional faculty at degree-granting institutions (adjusted for inflation): 1979-80
FACULTY SALARIES: Percentage change in total compensation, average salary by academic rank and type of institution,
and fringe benefits of full-time instructional faculty at degree-granting institutions (adjusted for inflation): 1979-80

## Finance

## Employment of College Students

## In 2005, about half of full-time and 85 percent of part-time college students ages 16-24 were employed.

The percentage of full-time college students ages 16-24 who were employed increased from 34 to 49 percent between 1970 and 2005. In addition, the number of hours these students worked per week increased. In 1970, some 10 percent of full-time students worked 20-34 hours per week and 4 percent worked 35 or more hours per week; while in 2005, about 21 percent worked 20-34 hours per week and 9 percent worked 35 or more hours per week (see supplemental table 45-1). In the more recent years, 2001 through 2005, there were no measurable changes in these employment percentages.

Between 1970 and 2005, there was no measurable change in the percentage of part-time college students ages 16-24 who were employed. In 2005, approximately 85 percent of part-time college students were employed. However, parttime college students worked fewer hours in 2005 than they did in 1970, with the percentage of students working 35 or more hours a week decreasing from 60 to 47 percent and the percentage working less than 20 hours a week increasing from 5 to 10 percent. In the more recent years, 2001 through 2005, there were
no measurable changes in these employment percentages.

In 2005 , the percentage of full-time college students ages 16-24 who were employed differed by sex, race/ethnicity, and school type. Female students were more likely than male students to be employed ( 51 vs. 47 percent) (see supplemental table 45-2). Also, White students ( 53 percent) were more likely than Black (38 percent), Hispanic (41 percent), and Asian ( 39 percent) students to be employed. Approximately 54 percent of students attending 2 -year colleges full time were employed, and this percentage did not differ by school type (public vs. private). Full-time students attending 4 -year colleges were less likely than full-time students attending 2-year colleges to be employed ( 48 vs. 54 percent) and were less likely to work longer hours (about 8 percent of 4 -year college students worked 35 or more hours per week compared with 14 percent of 2 -year college students). Among full-time students enrolled in 4 -year colleges, students in public colleges were more likely than students in private colleges to be employed ( 50 vs. 42 percent).

EMPLOYMENT OF COLLEGE STUDENTS: Percentage of 16- to 24-year-old full-time college students who were employed, by hours worked per week: October 1970 through October 2005

NOTE:College includes both 2- and 4-year institutions. College students were classified as attending full time if they were taking at least 12 hours of classes (or at least 9 hours of graduate classes) during an average school week and were classified as part time if they were taking fewer hours.
SOURCE: U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October Supplement, 1970-2005.

# Federal Grants and Loans to Undergraduate Students 

From 1992-93 to 1999-2000, the percentage of full-time, full-year undergraduates with federal loans increased, while the percentage with federal grants did not. There were increases for both loans and grants from 1999-2000 to 2003-04.

Calculated from The College Board $(2003,2005)$, Trends in Student Aid. From the 2003 report, the data for 1992-93 were adjusted to constant 2003-04 dollars. Only Pell Grants, Supplemental Educational Opportunity Grants (SEOG), Perkins loans, and subsidized and unsubsidized Stafford loans are included in the federal grant and loan amounts cited.
NOTE:Federal loans include Perkins,subsidized and unsubsidized Stafford, and Supplemental Loans to Students (SLS); federal grants are primarily Pell Grants and Supplemental Educational Opportunity Grants (SEOG) but also include Byrd scholarships. Total federal aid includes federal work-study aid as well as grants and loans. Parent Loans for Undergraduate Students (PLUS) loans to parents, veterans'benefits, and tax credits are not included in any of the totals. Loans as a percentage of federal aid is determined by dividing the amount of federal loans received (including zero loan amounts) by the amount of total federal aid received for each case. Income for financially dependent students is based on parents' annual income in the prior year. Low-income students were defined as those with family incomes below the 25th percentile.Adjusted to constant 2003-04 dollars, the cutoff points for each survey year were in 1992-93, \$39,200; in 1999-2000, \$35,700; and in 2003-04, \$34,200. Data adjusted by the Consumer Price Index for All Urban Consumers (CPI-U) to 2003-04 dollars. See supplemental note 11 for more information about the CPI-U.
SOURCE: U.S. Department of Education, National Center for Education Statistics, 1992-93, 1999-2000, and 2003-04 National Postsecondary Student Aid Studies (NPSAS:93,NPSAS:2000, and NPSAS:04).

FOR MORE INFORMATION:
Supplemental Notes 3,11
Supplemental Table 46-1
The College Board 2003,2005

Grants and loans are the major forms of federal financial support to postsecondary students. Federal grants are available to undergraduates who qualify by income, whereas loans are available to all students. In 1992, the federal government increased loan limits, extended eligibility for subsidized loans for middle- and high-income students, and introduced unsubsidized loans for students regardless of income. From 1992-93 to 2003-04, the annual amount of federal loans borrowed by both undergraduates and graduates grew from about $\$ 19$ billion to $\$ 50$ billion, while federal grants received by undergraduates grew from about $\$ 9$ billion to $\$ 13$ billion. ${ }^{1}$

This indicator examines the percentage of full-time, full-year undergraduates who borrowed through federal loan programs between 1992-93 (the last year before the changes took effect) and 2003-04, the percentage receiving federal grants, and the average annual amounts received by recipients in constant 2003-04 dollars (see supplemental table 46-1).

From 1992-93 to 1999-2000, the percentage of full-time, full-year undergraduates who had federal loans increased from 31 to 44 percent, while the percentage receiving grants remained near 30 per-
cent. By 2003-04, both the percentage with loans ( 48 percent) and the percentage receiving grants (34 percent) had increased. As a result of the relative changes in grants and loans received over these periods, the average percentage of federal aid received as loans increased from 54 percent in 1992-93 to 64 percent in 1999-2000, with no substantial change observed in 2003-04 (63 percent).
Among low-income dependent undergraduates, the percentage taking out federal loans remained between 47 and 48 percent from 1992-93 to 2003-04, while the percentage receiving federal grants increased from 68 percent in 1992-93 to 72 percent in 1999-2000 and 2003-04. As a result of these changes, the average proportion of federal aid these students received as loans decreased from 38 to 34 percent from 1992-93 to 2003-04. In contrast, among high-income dependent undergraduates, the percentage taking out federal loans increased from 13 percent in 1992-93 to 32 percent in 1999-2000 to 38 percent in 2003-04, while no measurable change was observed in the percentage receiving grants (about 1 percent) between 1992-93 and 2003-04. Thus, the percentage of federal aid that high-income dependent undergraduates received as loans increased from 88 to 92 percent.

> FEDERAL AID: Percentage of full-time, full-year undergraduates who received federal loans and grants and the average percentage of federal aid received as loans, for all undergraduates and low-income dependent undergraduates: 1992-93, 1999-2000, and 2003-04

Total and Net Access Price of Attending a Postsecondary Institution
For full-time dependent undergraduates, larger grants and loans generally compensated for increases in the total price of attending an institution in the 1990s. Since 1999-2000, however, the net access price of attending a public 4-year institution has increased.

What and how undergraduates and their families pay for college have changed since the early 1990s. Growth in tuition and fees outpaced both inflation and median family income during this period (The College Board 2004), and the financial aid system changed. At the federal level, the 1992 reauthorization of the Higher Education Act expanded eligibility for financial aid, raised loan limits, and introduced unsubsidized loans for students regardless of income. Also, during the 1990s, the federal government introduced tax credits to ease the burden of paying for college, and states and institutions increased their grant programs, particularly programs considering merit (The College Board 2004; Horn and Peter 2003).

The total price of attending a postsecondary institution includes tuition and fees, books and materials, and an allowance for living expenses. In 2003-04, the average price of attendance for full-time ${ }^{1}$ dependent students was $\$ 9,800$ at public 2 -year institutions, $\$ 15,100$ at public 4 -year institutions, $\$ 29,500$ at private not-forprofit 4-year institutions, and $\$ 18,100$ at private for-profit less-than-4-year institutions. Between 1989-90 and 1999-2000, the average total price of attendance for these students increased at each of the four major types of institutions. Between 1999-2000 and 2003-04, it increased again at public 2-year institutions and at public 4-year and private not-for-profit 4-year institutions.

Many students and their families do not pay the full price of attendance, but receive financial aid to help cover their expenses. The primary types of aid are grants, which do not have to be repaid, and loans, which must be repaid. ${ }^{2}$ Grants (including scholarships) may be awarded on the basis of financial need, merit, or other criteria and include tuition aid from employers. The loan amounts reported in this indicator include student borrowing through federal, state, institutional, or alternative (private) loan programs and loans taken out by parents through the federal Parent Loans for Undergraduate Students (PLUS) program.

Between 1989-90 and 1999-2000, the average amount received in grants and the average amount borrowed, adjusted for inflation, both increased for full-time dependent undergraduates at public 2 - and 4 -year and private not-for-profit 4 -year institutions (see supplemental table 47-1). Between 1999-2000 and 2003-04, the average amount borrowed increased for students at public 2- and 4 -year institutions and at private not-for-profit 4 -year institutions. Increases in the average grant amount between 1999-2000 and 2003-04, however, were statistically significant only for students at public 4-year institutions.

The net access price is an estimate of the cash outlay that students and their families need to make in a given year to cover educational expenses. It is calculated here as the total price of attendance minus grants (which decrease the price) and loans (which postpone payment of some portion of expenses). Between 1989-90 and 1999-2000, grants and loans increased along with total price, and the only statistically significant increase in net access price occurred for full-time dependent undergraduates at public 2-year institutions (see supplemental table 47-2). Between 1999-2000 and 2003-04, however, net access price increased at public 4-year institutions despite increases in both grants and loans during that period.

Within type of institution, families at different income levels were affected differently by changes in net access price. For instance, while net access price increased overall at public 4-year institutions between 1999-2000 and 2003-04, only middleincome students faced statistically significant increases; there was no measurable change for low- and high-income students. At private not-for-profit 4-year institutions, while there was no statistically significant increase in net access price overall between 1999-2000 and 2003-04, there was an increase for low-income students, but there was no measurable change for students at other income levels.

PRICE OF ATTENDANCE: Average total price, loans, grants, and net access price for full-time, full-year dependent undergraduates, by type of institution: 1989-90, 1999-2000, and 2003-04
${ }^{1}$ Full time means students attended full time (as defined by the institution) for the full year (at least 9 months at a 2-or 4-year institution or 6 months at a less-than-4-year institution).
${ }^{2}$ Loans promote access to postsecondary education by providing the cash needed to enroll. However, because the funds must be repaid (with interest), loans defer rather than reduce the price of attending.
NOTE: Net access price is an estimate of the cash outlay that students and their families need to make in a given year to cover educational expenses. It is calculated here as the total price of attendance minus grants and loans. Information on the use of tax credits by individual families is not available and therefore could not be taken into account in calculating net access price. Averages were computed for all students, including those who did not receive financial aid. Data adjusted by the Consumer Price Index for All Urban Consumers (CPI-U) to 2003-04 dollars. See supplemental note 11 for more information about the CPI-U. Estimates exclude students who were not U.S. citizens or permanent residents, and therefore were ineligible for federal student aid; students who attended more than one institution in a year, because of the difficulty matching information on price and aid; and students who attended private for-profit 4-year institutions, because of their small number. Detail may not sum to totals because of rounding.

## Finance

# Total and Net Access Price for Graduate and First-Professional Students 

## Master's, doctoral, and first-professional students differ in their enrollment patterns and in the types and amounts of financial aid they receive to help pay for their education.

In 2003-04, the average total price (tuition and fees, books and materials, and living expenses) for 1 year of full-time graduate education ranged from $\$ 21,900$ for a master's degree program at a public institution to $\$ 41,900$ for a first-professional degree program at a private not-for-profit institution. ${ }^{1}$ Students attending full time typically received some type of financial aid to help cover their expenses- 81 percent at the master's level and over 90 percent at the doctoral and first-professional levels (see supplemental table 48-2). Grants and assistantships (which require work) are usually awarded on a discretionary basis and not related to financial need. Students must demonstrate financial need to obtain Perkins or subsidized Stafford loans, but not to take out unsubsidized Stafford or private loans. Graduate students sometimes receive tuition assistance from their employers (considered grant aid). This was especially true for part-time students in master of business administration programs, 49 percent of whom received this type of aid (see supplemental table 48-3).

Compared with students at other levels, relatively few master's students (about 20 percent at each institution type) enrolled full time.

Among those who did, the average net access price (total price minus all financial aid) was $\$ 9,700$ at public institutions and $\$ 16,400$ at private not-for-profit ones. Compared with their peers at private not-for-profit institutions, on average, full-time master's students at public institutions received more in assistantships and other aid ${ }^{2}$ and borrowed less.

Full-time doctoral students had an average net access price of $\$ 6,800$ at public institutions and $\$ 13,900$ at private not-for-profit institutions. Although full-time doctoral students in both sectors faced a higher average total price than their counterparts at the master's level, they received larger average amounts in grants and assistantships and other aid and did not borrow more.

No measurable differences were found in the net access price paid by full-time first-professional and doctoral students in either sector. However, first-professional students relied more heavily on loans to pay for their education, averaging $\$ 20,500$ at public institutions and $\$ 25,700$ at private not-for-profit institutions, compared with $\$ 5,700$ and $\$ 10,300$, respectively, for doctoral students.

PRICE OF ATTENDANCE: Average annual total price, financial aid, and net access price for full-time graduate and firstprofessional students and percentage of all students attending full time: 2003-04

${ }^{1}$ Of all graduate/first-professional students, 60 percent were enrolled in master's degree programs, 14 percent in doctoral degree programs, 12 percent in first-professional programs, and 14 percent in postbaccalaureate certificate programs or in graduate courses (NCES 2006-185). First-professional programs include chiropractic, osteopathic medicine, dentistry, pharmacy, law, podiatry, medicine, theology, optometry, and veterinary medicine.
${ }^{2}$ The category assistantships and other aid consists primarily of assistantships but also includes a small amount of other types of aid such as work study, state vocational rehabilitation and job training grants, federal veterans benefits, and military tuition aid.
NOTE:Analysis is limited to students who attended for the full year at only one institution in 2003-04 to keep aid and price consistent. Full time means enrolled full time (according to the institution's definition) for at least 9 months during the 2003-04 academic year; full-time enrollment does not preclude working as well. Averages are calculated across all students, including those with no aid. Detail may not sum to totals because of rounding.

Appendix 1
Supplemental Tables

Appendix 1 contains all the supplemental tables for the special analysis and the indicators in this volume.

The supplemental tables for the special analysis are labeled with the prefx "SA" "ollowed by a number representing the table's sequence in the special analysis.

The indicator tables are numbered sequentially according to indicator with a numbered suffix added to reflect the order of the supplemental table in each indicator. For example, indicator 13 has three supplemental tables, so the tables are numbered Table 13-1, 13-2, and13-3.

The standard errors for the supplemental tables in appendix 1 are not included here, but can be found on the NCES website. Go to http://nces.ed.gov, select the Annual Reports tab, and then select The Condition of Education. The supplemental and standard error tables for the special analysis and each indicator (and all other supporting information) are included with the special analysis and each indicator in that volume.

| ${ }^{1}$ A writing test is required in addition to the English/language arts examination or as a component of it. <br> ${ }^{2} \mathrm{~A}$ civics and economics test is required in addition to a U.S. history examination. <br> NOTE:Year in table indicates when the state is scheduled to institute an exit examination in that subject. Utah had planned to enforce an exit exam requirement in 2006, but that year decided not to withhold diplomas from students who failed the examination if they met other graduation requirements. <br> SOURCE: Center on Education Policy. (2006). State High School Exit Exams: A Challenging Year, adapted from table 1, data from state departments of education, June 2006. |  |  |  |  |  |

## High School Coursetaking

Table SA-2. Number and percentage of public high schools that offered dual-credit,Advanced Placement (AP), and International Baccalaureate (IB) courses, by selected school characteristics: 2002-03

| School characteristic Toren | Total number of high schools | Offered dual-credit courses |  | Offered Advanced Placement courses |  | Offered International Baccalaureate courses |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Number | Percent | Number | Percent | Number | Percent |
| All public high schools | s 16,500 | 11,700 | 71 | 11,000 | 67 | 390 | 2 |
| Enrollment size |  |  |  |  |  |  |  |
| Less than 500 | 7,400 | 4,700 | 63 | 3,000 | 40 | $\ddagger$ | $\ddagger$ |
| 500 to 1,199 | 5,000 | 3,700 | 75 | 4,100 | 82 | 70 | 2 |
| 1,200 or more | 4,100 | 3,300 | 82 | 3,900 | 97 | 290 | 7 |
| School locale |  |  |  |  |  |  |  |
| City | 2,700 | 1,800 | 65 | 2,100 | 77 | 150 | 6 |
| Urban fringe | 4,100 | 3,100 | 74 | 3,600 | 87 | 180 | 4 |
| Town | 2,400 | 1,900 | 79 | 1,700 | 72 | 20! | 1 ! |
| Rural | 7,200 | 5,000 | 70 | 3,600 | 50 | $\ddagger$ | $\ddagger$ |
| Region |  |  |  |  |  |  |  |
| Northeast | 2,800 | 1,600 | 58 | 2,300 | 84 | 30 | 1 |
| Southeast | 3,500 | 2,400 | 69 | 2,400 | 69 | 170 | 5 |
| Central | 5,200 | 4,100 | 80 | 2,800 | 54 | 50 | 1 |
| West | 5,100 | 3,600 | 71 | 3,500 | 69 | 150 | 3 |
| Percent minority enrollment |  |  |  |  |  |  |  |
| Less than 6 percent | 5,600 | 4,300 | 76 | 3,300 | 58 | \# | \# |
| 6 to 20 percent | 3,800 | 3,000 | 78 | 2,600 | 70 | 90 | 2 |
| 21 to 49 percent | 3,200 | 2,300 | 72 | 2,400 | 75 | 150 | 5 |
| 50 percent or more | 3,600 | 2,100 | 58 | 2,500 | 69 | 150 | 4 |

\# Rounds to zero.
! Interpret data with caution (estimates are unstable)
$\ddagger$ Reporting standards not met (too few cases).
NOTE:Dual-credit courses allow students to earn both high school and postsecondary credits for a single course. AP courses and their end-of-course examinations are developed and administered by The College Board and allow students to earn postsecondary credit. IB courses are defined as courses that make up a 2 -year liberal arts curriculum that leads to an IB diploma. Percentages are based on unrounded numbers. Detail may not sum to totals because of rounding or missing data. For the FRSS study sample, there were 29 cases for which the percent minority enrollment in the school was missing. Those cases were included in the totals and in analyses by other school characteristics. See supplemental note 1 for school locale definitions

| Private | 3.5 | 0.6 | 1.4 | 1.0 | 0.6 | 2.7 | 1.9 | 1.5 |

${ }^{1}$ Includes nonoccupational vocational education, vocational general introduction, agriculture, business, marketing, health, occupational home economics, trade and industry, and technical courses.
NOTE:The Carnegie unit is a standard of measurement that represents 1.0 credit for the completion of a 1 -year course. Data differ slightly from figures appearing in other NCES reports because of differences in taxonomies and case exclusion criteria. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.

${ }^{1}$ Excludes prealgebra.
${ }^{2}$ Includes algebra/trigonometry and algebra/geometry.
NOTE:These data only report the percentage of students who earned a minimum amount of credit in each course while in high school and do not include a count of those courses taken prior to entering high school. In 2004, approximately 95 percent of graduates had taken algebra I before or during high school.

| 2004 | 0.7 | 10.8 | 55.9 | 32.7 | 9.2 | 7.6 | 15.9 |

${ }^{1}$ Includes graduates who completed a general English course classified as "below grade level" if they completed a greater percentage of "honors" courses than "below grade level" courses.
${ }^{2}$ Indicates that student transcript records did not list any recognized English courses; however, these graduates may have studied some English. If graduates took only English as a second language (ESL) courses for credit, they would be listed in this category.
${ }^{3}$ Low academic level courses include all general English courses classified as "below grade level." Graduates may have taken a general English course classified as regular or "honors" and be classified in the low academic level if the percentage of "below grade level" courses completed was the plurality of courses completed.
NOTE:For each graduate, the percentages of completed courses classified as "below level,""at grade level," and "honors" were calculated. (Not all graduates completed 4 years of English.) After the percentage of graduates at each level had been calculated, the percentage of graduates who fit the category requirement for each level was determined, as explained in supplemental note 12. Detail may not sum to totals because of rounding.

| 2004 | 17.3 | 49.2 | 33.5 | 18.4 | 9.8 | 5.3 |
| $2004{ }^{1}$ | 15.5 | 50.0 | 34.5 | 19.1 | 10.1 | 5.4 |

${ }^{1}$ Foreign language coursetaking based upon classes in Amharic (Ethiopian), Arabic, Chinese (Cantonese or Mandarin), Czech, Dutch, Finnish, French, German, Greek (Classical or Modern), Hawaiian, Hebrew, Italian, Japanese, Korean, Latin, Norse (Norwegian), Polish, Portuguese, Russian, Spanish, Swahili, Swedish, Turkish, Ukrainian, or Yiddish.
NOTE:Foreign language coursetaking based upon classes in Spanish, French, Latin, or German, unless noted otherwise. From 1982 to 2000, less than 1 percent of students studied only a foreign language other than Spanish, French, Latin, or German. The distribution of graduates among the various levels of foreign language courses was determined by the level of the most academically advanced course they completed. Graduates who had completed courses in different languages were counted according to the highest level course completed. Graduates may have completed advanced levels of courses without having taken courses at lower levels. See supplemental note 12 for more details on these levels. Detail may not sum to totals because of rounding.

## High School Coursetaking

Table SA-12. Percentage distribution of high school graduates, by highest level of foreign language course completed and selected characteristics: 2004

| Characteristic |  | Year 1 or less |  | Advanced academic level |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | None |  | Year 2 | Year 3 or higher | Year 3 | Year 4 | Advanced Placement (AP) |
| Total | 15.5 | 16.1 | 33.9 | 34.5 | 19.1 | 10.1 | 5.4 |
| Sex |  |  |  |  |  |  |  |
| Male | 19.2 | 17.7 | 33.6 | 29.4 | 17.3 | 8.0 | 4.2 |
| Female | 11.9 | 14.6 | 34.1 | 39.4 | 20.8 | 12.1 | 6.5 |
| Race/ethnicity |  |  |  |  |  |  |  |
| White | 14.1 | 15.6 | 33.0 | 37.2 | 20.6 | 11.4 | 5.3 |
| Black | 15.9 | 22.5 | 42.0 | 19.6 | 13.3 | 5.5 | 0.8 |
| Hispanic | 20.4 | 14.6 | 32.3 | 32.8 | 15.1 | 7.8 | 10.0 |
| Asian/Pacific Islander | 10.8 | 12.3 | 26.4 | 50.5 | 27.2 | 14.2 | 9.1 |
| American Indian | 41.6 | 19.4 | 23.9 | 15.1 | 9.3 | 5.3 | 0.5 |
| Control of school |  |  |  |  |  |  |  |
| Public | 16.5 | 16.8 | 34.1 | 32.6 | 18.1 | 9.3 | 5.2 |
| Private | 4.3 | 9.0 | 30.6 | 56.1 | 30.2 | 18.2 | 7.7 |

NOTE:Foreign language coursetaking based upon classes in Amharic (Ethiopian), Arabic, Chinese (Cantonese or Mandarin), Czech, Dutcc,Finnish, French, German, Greek (Classical or Modern), Hawaiian, Hebrew, Italian, Japanese, Korean,Latin,Norse (Norwegian),Polish,Portuguese,Russian,Spanish,Swahili,Swedish,Turkish,Ukrainian, or Yiddish.Some graduates in each category also studied more than one foreign language.The distribution of graduates among the various levels of foreign language courses was determined by the level of the most academically advanced course they completed. Graduates who had completed courses in different languages were counted according to the highest level course completed. Graduates may have completed advanced levels of courses without having taken courses at lower levels. See supplemental note 12 for more details on these levels. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.

NOT:TOtal averages for all examinations and by subject area include other race/ethnicity categories not separately shown. Biology, calculus AB, chemistry, English literature and composition, physics B, and U.S. history are some of the most frequently taken AP exams. The grades for all AP exams range from 1.0 to 5.0 , with 5.0 being the highest score. Data reported are for all students who completed an AP exam. The College Board collects racial/ethnic information based on the categories American Indian/Alaska Native;Asian/Asian American;Black/Afro-American; Latino:Chicano/Mexican, Puerto Rican, Other Latino;White; and Other. Hispanic refers to the sum of all Latino subgroups. Race categories exclude persons of Hispanic ethnicity.

| Some college, including vocational/technical | 60 | 60 | 57 | 58 | 63 | 62 | 56 |
| Bachelor's degree or higher | 72 | 73 | 75 | 73 | 74 | 70 | 73 |
| Mother's employment |  |  |  |  |  |  |  |
| 35 hours or more per week | 59 | 61 | 60 | 63 | 65 | 63 | 64 |
| Less than 35 hours per week | 58 | 57 | 62 | 64 | 64 | 61 | 61 |
| Looking for work | 43 | 48 | 52 | 47 | 55 | 47 | 42 |
| Not in labor force | 45 | 44 | 47 | 43 | 52 | 47 | 50 |

${ }^{1}$ Race categories exclude persons of Hispanic ethnicity. Included in the total, but not shown separately, are children from other racial/ethnic groups.
${ }^{2}$ Poor is defined to include families below the poverty threshold; nonpoor is defined to include families whose incomes are at or above the poverty threshold. See supplemental note 1 for more information on poverty.
NOTE: Estimates are based on children who have not yet entered kindergarten. Center-based programs include day care centers, Head Start programs, preschool, nursery school, prekindergarten, and other early childhood programs. Children without mothers in the home are not included in estimates for mother's education or mother's employment.

${ }^{1}$ Other religious schools have a religious orientation or purpose, but are not Roman Catholic. Conservative Christian schools are those with membership in at least one of four associations-Accelerated Christian Education, American Association of Christian Schools, Association of Christian Schools International, or Oral Roberts University Education Fellowship. Affiliated schools are those with membership in one of 12 associations-Association of Christian Teachers and Schools,Christian Schools International, Council of Islamic Schools in North America, Evangelical Lutheran Education Association,Friends Council on Education, General Conference of the Seventh-Day Adventist Church, Islamic School League of America,National Association of Episcopal Schools, National Christian School Association, National Society for Hebrew Day Schools, Solomon Schechter Day Schools, Southern Baptist Association of Christian Schools—or indicating membership in "other religious school associations." Unaffiliated schools are those that have a religious orientation or purpose, but are not classified as Conservative Christian or affiliated.
${ }^{2}$ Nonsectarian schools do not have a religious orientation or purpose.
${ }^{3}$ Grades K-8 and 9-12 do not include ungraded students; therefore, these two categories do not sum to grades K-12.
NOTE:Detail may not sum to totals because of rounding.

## - Not available.

${ }^{1}$ From 1989 through 2002,Asian and Pacific Islander students were not reported separately; therefore, Pacific Islander students are included with Asian students during this period.
NOTE:Figures include all public school students enrolled in kindergarten through 12th grade. Race categories exclude persons of Hispanic ethnicity. Over time, the Current Population Survey (CPS) has had different response options for race/ethnicity. In 1994, the survey methodology for the CPS was changed and weights were adjusted. In 1996, the Census revised procedures for editing and allocating the race variable to offset an underestimation of Asians/Pacific Islanders. One should use caution when making comparisons between data for 1995 and earlier and data for 1996 and later. See supplemental note 2 for more information on the CPS. Detail may not sum to totals because of rounding.

- Not available.
\# Rounds to zero.
$\ddagger$ Reporting standards not met (too few cases).
! Interpret data with caution (estimates are unstable)
${ }^{1}$ From 1989 through 2002, Asian and Pacific Islander students were not reported separately; therefore, Pacific Islander students are included with Asian students during this period.
NOTE:Figures include all public school students enrolled in kindergarten through 12th grade. Race categories exclude persons of Hispanic ethnicity. Over time, the Current Population Survey (CPS) has had different response options for race/ethnicity.In 1994, the survey methodology for the CPS was changed and weights were adjusted. In 1996, the Census revised procedures for editing and allocating the race variable to offset an underestimation of Asians/Pacific Islanders. One should use caution when making comparisons between data for 1995 and earlier and data for 1996 and later. See supplemental note 2 for more information on the CPS. Detail may not sum to totals because of rounding.

| 2005 | 52.8 | 10.6 | 20.0 | 2.8 | 5.4 | 26.8 |
| Percentage change compared with 1979 |  |  |  |  |  |  |
| 2005 | 18.2 | 177.9 | 135.1 | 118.0 | 91.6! | -21.6 |

! Interpret data with caution.
${ }^{1}$ Respondents were asked if each child in the household spoke a language other than English at home. If they answered "yes,"they were asked how well each child could speak English. Categories used for reporting were"very well,""well,""not well,"and "not at all."All those who reported speaking English less than "very well" were considered to have difficulty speaking English.
NOTE:Spanish-language versions of both the Current Population Survey (CPS) and the American Community Survey (ACS) were available to respondents. In 1994, the survey methodology for the CPS was changed and weights were adjusted. Due to differences between the CPS and the ACS, use caution when comparing data before 2000 (CPS) with data from 2000 (ACS). See supplemental notes 2 and 3 for more information.
SOURCE:U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), 1979 and 1989 November Supplement and 1992, 1995, and 1999 October Supplement, and American Community Survey (ACS), 2000-05.

$\dagger$ Not applicable.
! Interpret data with caution.
'Respondents were asked ifeach child in the household spoke a language other than English at home.If they answered "yes,"they were asked how well each child could speak English. Categories used for reporting were"very well,""well,""not well," and "not at all."All those who reported speaking English less than "very wel"" were considered to have difficulty speaking English.
${ }^{2}$ Percentage of the total population for that particular subgroup.For example, 16.6 percent of all American Indians/Alaska Natives spoke a language other than English at home, and 2.6 percent of all American Indians/Alaska
Natives spoke a language other than English at home and spoke English with difficulty.
${ }^{3}$ An Indo-European language other than Spanish (e.g., French, German, Portuguese, etc.).
${ }^{4}$ Any native language spoken by Asians or Pacific I slanders, which linguists classify variously as Sino-Tibetan, Austroasiatic, or Austronesian languages.
${ }^{5}$ Race categories exclude persons of Hispanic ethnicity.
${ }^{6}$ Poor is defined to include families below the poverty threshold, near-poor is defined to include families at 100 - 199 percent of the poverty threshold, and nonpoor is defined to include families at 200 percent or more than the poverty threshold.
NOTE:Detail may not sum to totals because of rounding. A Spanish-language version of the American Community Survey (ACS) was available to respondents. For information about the states in each region, seesupplemental note 1 .

| 2004-05 | 6,719 | 13.8 | 8.7 |
| 2005-06 | 6,713 | 13.8 | 8.6 |

${ }^{1}$ Number of children served as a percentage of all children ages 3-21 enrolled in early education centers and elementary and secondary schools.
${ }^{2}$ Number of children served under IDEA as a percentage of the total population ages 3-21.
NOTE:Special education services through the Individuals with Disabilities Education Act (IDEA) are available for eligible youth identified by a team of qualified professionals as having a disability that adversely affects academic performance and in need of special education and related services. The total includes youth receiving special education services through IDEA in early education centers and elementary and secondary schools in the 50 states and the District of Columbia and in Bureau of Indian Affairs (BIA) schools through 1993-94. Beginning in 1994-95, totals exclude BIA schools. See supplemental note 8 for more information about student disabilities represented here. $\dagger$ Not applicable.
\# Rounds to zero.
${ }^{1}$ Beginning in 1976, data were collected for preschool-aged children by disability type; those data are combined above with data for youth ages 6-21. However, the 1986 Amendments to the Education of the Handicapped Act (now known as IDEA) mandated that data not be collected by disability for students ages 3-5.Accordingly, those data are reported as a separate row for years 1990-91 through 1999-2000. Beginning in 2000-01, states were again required to report preschool children by disability.
NOTE:Detail may not sum to totals because of rounding. Special education services through the Individuals with Disabilities Education Act (IDEA) are available for eligible youth identified by a team of qualified professionals as having a disability that adversely affects academic performance and in need of special education and related services. The total includes youth receiving special education services through IDEA in early education centers and elementary and secondary schools in the 50 states and the District of Columbia, excluding Bureau of Indian Affairs schools. See supplemental note 8 for more information about student disabilities represented here. NOTE: Because of underreporting and nonreporting of racial/ethnic data, some figures are slightly lower than corresponding data in other published tables. See supplemental note 3 for more information on the Integrated Postsecondary Education Data System (IPEDS). See the glossary for definitions of minority and first-professional degrees. Race categories exclude persons of Hispanic ethnicity.

## Participation in Adult Education

Table 10-1. Percentage of population age 16 or older who participated in adult education activities, by age and type of activity:Selected years, 1995-2005

| Type of activity | 1995 | 1999 | 2001 | 2005 |
| :---: | :---: | :---: | :---: | :---: |
| Age 16 or older |  |  |  |  |
| Overall participation | 40.2 | 44.5 | 46.4 | 44.4 |
| Work-related courses | 20.9 | 22.1 | 29.7 | 26.9 |
| Personal interest courses | 19.9 | 22.2 | 21.3 | 21.4 |
| Part-time degree or diploma programs | 6.1 | 9.3 | 5.5 | 5.0 |
| Other activities ${ }^{1}$ | 2.9 | 4.1 | 3.6 | 3.2 |
| Ages 16-24 |  |  |  |  |
| Overall participation | 47.0 | 50.1 | 52.8 | 52.9 |
| Work-related courses | 14.6 | 16.3 | 22.3 | 21.2 |
| Personal interest courses | 21.5 | 22.7 | 27.6 | 26.6 |
| Part-time degree or diploma programs | 12.6 | 13.6 | 12.8 | 11.4 |
| Other activities ${ }^{1}$ | 8.7 | 11.6 | 11.5 | 9.7 |
| Age 25 or older |  |  |  |  |
| Overall participation | 39.3 | 43.8 | 45.6 | 43.2 |
| Work-related courses | 21.8 | 22.9 | 30.7 | 27.7 |
| Personal interest courses | 19.6 | 22.1 | 20.5 | 20.7 |
| Part-time degree or diploma programs | 5.2 | 8.7 | 4.5 | 4.2 |
| Other activities ${ }^{1}$ | 2.1 | 3.1 | 2.6 | 2.4 |

${ }^{1}$ Includes basic skills training, apprenticeships, and English as a Second Language (ESL) courses.
NOTE: Estimates exclude persons who were attending elementary or secondary school, on active duty in the U.S. Armed Forces, or institutionalized. Estimates include part-time participation in college or university degree programs and vocational or technical diploma programs. Full-time participation for all or part of the year in a degree or diploma program was not counted as an adult education activity.

| Household income |  |  |  |  |  |
| \$15,000 or less | 29.0 | 2.8 | 10.9 | 17.9 | 4.8 |
| \$15,001-30,000 | 30.7 | 4.9 | 14.6 | 15.1 | 3.9 |
| \$30,001-50,000 | 42.1 | 3.3 | 22.6 | 21.8 | 4.3 |
| \$50,001-75,000 | 47.7 | 5.8 | 33.0 | 20.5 | 1.6 |
| More than \$75,000 | 57.6 | 6.7 | 39.0 | 27.0 | 2.7 |
| Employment/occupation |  |  |  |  |  |
| Employed in past 12 months | 51.7 | 6.4 | 35.9 | 22.0 | 3.5 |
| Professional or managerial | 70.2 | 8.8 | 56.3 | 29.2 | 1.2 |
| Services, sales, or support | 48.3 | 6.3 | 30.6 | 22.0 | 3.6 |
| Trades | 34.0 | 3.3 | 18.7 | 12.9 | 6.3 |
| Not employed in past 12 months | 25.5 | 1.6 | 4.0 | 20.0 | 2.6 |
| ! Interpret data with caution (estimates are unstable). |  |  |  |  |  |
| ${ }^{1}$ Includes basic skills training, apprenticeships, and English as a Second Language (ESL) courses. |  |  |  |  |  |
| ${ }^{2}$ Race categories exclude persons of Hispanic ethnicity. |  |  |  |  |  |
| NOTE: Estimates exclude persons who were attending elementary or secondary school, on active duty in the U.S. Armed Forces, or institutionalized. Estimates include part-time participation in college or university degree programs and vocational or technical diploma programs. Full-time participation for all or part of the year in a degree or diploma program was not counted as an adult education activity. Individuals may participate in more than one adult education activity.Therefore, totals for each activity may not sum to overall participation totals. |  |  |  |  |  |

## Reading Performance of Students in Grades 4, 8, and 12

Table 11-1. Average reading score by percentile and percentage of students at each achievement level, by grade: Selected years, 1992-2005

| Utah | 221 | 1 | 262 | -2 |
| Vermont | 227 | - | 269 | - |
| Virginia | 226 | 5* | 268 | 1 |
| Washington | 223 | - | 265 | 1 |
| West Virginia | 215 | -1 | 255 | -7* |
| Wisconsin | 221 | -2 | 266 | 1 |
| Wyoming | 223 | \# | 268 | 5* |

-Not available (state did not participate in earlier assessment).
\# Rounds to zero.

* Change in score is statistically significant ( $p<.05$ ).
${ }^{1} 1992$ was the first year for state-level data in grade 4. Testing accommodations (e.g., extended time, small group testing) for children with disabilities and limited-English-proficient students were not permitted.
${ }^{2} 1998$ was the first year for state-level data in grade 8 . Data used to calculate differences are for the 1998 assessment where testing accommodations (e.g., extended time,small group testing) for children with disabilities and limited-English-proficient students were permitted.
NOTE:State samples were not collected for grade 12; therefore, state results for grade 12 are not available. At the state level, the NAEP includes only students in public schools, while other reported national results in this indicator include both public and private school students.Variations or changes in exclusion rates for students with disabilities and limited-English-proficient students in the NAEP samples may affect comparative performance results. Beginning in 2002, the NAEP national sample for grades 4 and 8 was obtained by aggregating the samples from each state and the District of Columbia, rather than by obtaining an independently selected national sample. As a consequence, the size of the national samples for grades 4 and 8 increased, and smaller differences between years or between types of students were found to be statistically significant than would have been detected in previous assessments. Differences are based upon unrounded estimates. See supplemental note 4 for more information on testing accommodations and on NAEP.

## Trends in the Achievement Gaps in Reading and Mathematics

Table 14-1. White-Black and White-Hispanic gaps in average reading and mathematics scores, by grade:Various years, 1990-2005

| Subject, race/ethnicity, ${ }^{1}$ and grade | 1990 | 1992 | 1994 | 1996 | 1998 | 2000 | 2002 | 2003 | 2005 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Reading |  |  |  |  |  |  |  |  |  |
| White-Black gap Grade 4 | - | 32 | 38 | - | 32 | 34 | 30 | 31 | 29 |
| Grade 8 | - | 30 | 30 | - | 26 | - | 27 | 28 | 28 |
| White-Hispanic gap Grade 4 | - | 27 | 35 | - | 32 | 35 | 28 | 28 | 26 |
| Grade 8 | - | 26 | 24 | - | 27 | - | 26 | 27 | 25 |
| Mathematics |  |  |  |  |  |  |  |  |  |
| White-Black gap Grade 4 | 32 | 35 | - | 34 | - | 31 | - | 27 | 26 |
| Grade 8 | 33 | 40 | - | 41 | - | 40 | - | 35 | 34 |
| White-Hispanic gap Grade 4 | 20 | 25 | - | 25 | - | 27 | - | 22 | 20 |
| Grade 8 | 24 | 28 | - | 30 | - | 31 | - | 29 | 27 |

- Not available (tests not conducted in all grades for all years).
${ }^{1}$ Race categories exclude persons of Hispanic ethnicity.
NOTE:The score gap is determined by subtracting the average Black or Hispanic score, respectively, from the average White score. Testing accommodations (e.g., extended time, small group testing) for children with disabilities and limited-English-proficient students were not permitted in 1990-94. Beginning in 2002, the NAEP national sample for grades 4 and 8 was obtained by aggregating the samples from each state, rather than by obtaining an independently selected national sample. As a consequence, the size of the national sample increased, and smaller differences between years or between types of students were found to be statistically significant than would have been detected in previous assessments. See supplemental note 4 for more information on NAEP.

- Not available.
${ }^{1}$ Race categories exclude persons of Hispanic ethnicity.
NOTE:Includes public and private schools. Excludes persons not enrolled in school and those who were unable to be tested due to limited proficiency in English or a disability. Totals include other race/ethnicity categories not separately shown. The long-term trend NAEP scores range from 0 to 500 and have been evaluated at certain performance levels. Students at reading score level 150 are able to follow brief written directions and carry out simple, discrete reading tasks.Students at reading score level 200 are able to understand, combine ideas, and make inferences based on short uncomplicated passages about specific or sequentially related information. Students at reading score level 250 are able to search for specific information, interrelate ideas, and make generalizations about literature,science, and social studies materials. Students at reading score level 300 are able to find, understand, summarize, and explain relatively complicated literary and informational material. Students at reading score level 350 can extend and restructure the ideas presented and can synthesize and learn from specialized and complex texts. SOURCE:Perie, M., Moran, R., and Lutkus, A.D. (2005). NAEP 2004 Trends in Academic Progress: Three Decades of Student Performance in Reading and Mathematics (NCES 2005-464), figures 2-1,3-1,3-2, and 3-3, data from U.S. Department of Education, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1971-2004 Long-Term Trend Reading Assessment.

${ }^{1}$ Race categories exclude persons of Hispanic ethnicity.
NOTE:Includes public and private schools. Excludes persons not enrolled in school and those who were unable to be tested due to limited proficiency in English or a disability.Totals include other race/ethnicity categories not separately shown. The long-term trend NAEP scores range from 0 to 500 and have been evaluated at certain performance levels. A score of 150 implies the knowledge of some basic addition and subtraction facts, and most students at this level can add 2-digit numbers without regrouping. They recognize simple situations in which addition and subtraction apply. A score of 200 implies considerable understanding of 2-digit numbers and knowledge of some basic multiplication and division facts. A score of 250 implies an initial understanding of the four basic operations. Students at this level can also compare information from graphs and charts and are developing an ability to analyze simple logical relations. A score of 300 implies an ability to compute decimals, simple fractions, and percents. Students at this level can identify geometric figures, measure lengths and angles, and calculate areas of rectangles. They are developing the skills to operate with signed numbers, exponents, and square roots. A score of 350 implies an ability to apply a range of reasoning skills to solve multistep problems. Students at this level can solve routine problems involving fractions and percents, recognize properties of basic geometric figures, and work with exponents and square roots.

| Above grade level | 99.7 | 96.5 | 79.9 | 60.0 ! | 10.2! |

! Interpret with caution (estimates are unstable).
${ }^{1}$ Race categories exclude persons of Hispanic ethnicity. Other includes Native Hawaiian, Pacific Islander, American Indian, Alaska Native, and non-Hispanic children of more than one race.
${ }^{2}$ The federal poverty-level status composite variable is derived from household income and the total number of household members at each administration of the survey and is used to define households below the poverty level. For instance, in 1998 , if a household contained four members and the annual household income was lower than $\$ 16,600$, then the household was considered to be below poverty.
${ }^{3} 0$ ther refers to related and unrelated guardian(s).
NOTE:The mathematics skills presented are those that students are expected to develop between the spring of 3rd grade and the spring of 5th grade. Findings are based on all students who participated in the ECLS-K, not just those at grade level. Although most of the children in the sample were in 5 th grade in spring 2004, some 14 percent were in a lower grade, and 1 percent were in a higher grade. Findings are representative of the 3.8 million students in school in spring 2004 who were in kindergarten in fall 1998 . Poverty status, kindergarten through spring 2004; family type, kindergarten through spring 2004;and school type, kindergarten through spring 2004, are composite variables that are derived from each round of the survey (fall 1998, spring 1999, spring 2000, spring 2002, and spring 2004). Estimates were weighted by C1_6FC0.

1 Race categories exclude persons of Hispanic ethnicity.In 1992, respondents were allowed to identify only one race; ;in 2003, respondents were allowed to identify multiple races. Included in the total but not shown separately are American Indians/Alaska Natives and respondents with more than one race.
${ }^{2}$ The"English and Spanish" category includes adults who spoke only English and Spanish as well as adults who spoke English, Spanish, and another language(s).The"Spanish" category includes adults who spoke only Spanish as well as adults who spoke Spanish and another non-English language(s). The "Other language" category includes only adults who spoke neither English nor Spanish.
NOTE:Adults are defined as people age 16 or older living in households or prisons. Prose literacy is the knowledge and skills needed to perform prose tasks (i.e., to search, comprehend, and use information from continuous texts, such as paragraphs from stories); document literacy is the knowledge and skills needed to perform document tasks (i.e., to search, comprehend, and use information from noncontinuous texts in various formats, such as bills or prescription labels); and quantitative literacy is the knowledge and skills required to perform quantitative tasks (i.e., to identify and perform computations, either alone or sequentially, using numbers embedded in printed materials). Results are reported in terms of average scores on a $0-500$ scale. To compare results between 1992 and 2003 , the 1992 results were rescaled using the criteria and methods established for the 2003 assessment. SOURCE:Kutner, M., Greenberg, E., and Baer, J. (2005).A First Look at the Literacy of America's Adults in the 21st Century (NCES 2006-470), figures 1, 4, 11, 14, 18, and table 7, data from U.S. Department of Education, National Center for Education Statistics, 2003 National Assessment of Adult Literacy (NAAL) and 1992 National Adult Literacy Survey (NALS).

## Trends in Adult Literacy

${ }^{1}$ Race categories exclude persons of Hispanic ethnicity. In 1992, respondents were allowed to identify only one race; ;in 2003, respondents were allowed to identify multiple races. Included in the total but not shown separately are American Indians/Alaska Natives and respondents with more than one race.
${ }^{2}$ The"English and Spanish" category includes adults who spoke only English and Spanish as well as adults who spoke English, Spanish, and another language(s).The"Spanish" category includes adults who spoke only Spanish as well as adults who spoke Spanish and another non-English language(s). The "Other language" category includes only adults who spoke neither English nor Spanish.
NOTE: Adults are defined as people age16 or older living in households or prisons. Prose literacy is the knowledge and skills needed to perform prose tasks (i.e., to search, comprehend, and use information from continuous texts, such as paragraphs from stories); document literacy is the knowledge and skills needed to perform document tasks (i.e., to search, comprehend, and use information from noncontinuous texts in various formats, such as bills or prescription labels); and quantitative literacy is the knowledge and skills required to perform quantitative tasks (i.e., to identify and perform computations, either alone or sequentially, using numbers embedded in printed materials).

## — Not available.

$\ddagger$ Reporting standards not met (too few cases).
${ }^{1}$ Race categories exclude persons of Hispanic ethnicity.
${ }^{2}$ From 1989 through 2002, Asians and Pacific Islanders were not reported separately; therefore, Pacific Islanders are included with Asians during this period. Pacific Islander data, for years available separately, did not meet reporting standards.
NOTE:Earnings are presented in constant dollars by means of the Consumer Price Index (CPI) to eliminate inflationary factors and allow direct comparison across years. See supplemental note 11 for further discussion. Full-year worker refers to those who were employed 50 or more weeks the previous year; full-time worker refers to those who were usually employed 35 or more hours per week. The Current Population Survey (CPS) questions used to obtain educational attainment were changed in 1992. In 1994, the survey instrument for the CPS was changed and weights were adjusted. Estimates are revised from previous editions. See supplemental note 2 for further discussion.

— Not available
$\ddagger$ Reporting standards not met (too few cases).
${ }^{1}$ From 1989 through 2002, Asians and Pacific Islanders were not reported separately; therefore,Pacific Islanders are included with Asians during this period. Pacific Islander data, for years available separately, did not meet reporting standards. NOTE:Earnings are presented in constant dollars by means of the Consumer Price Index (CPI) to eliminate inflationary factors and allow direct comparison across years. See supplemental note 11 for further discussion. Full-year worker refers to those who were employed 50 or more weeks the previous year; full-time worker refers to those who were usually employed 35 or more hours per week. The Current Population Survey (CPS) questions used to obtain educational attainment were changed in 1992. In 1994, the survey instrument for the CPS was changed and weights were adjusted. Estimates are revised from previous editions. See supplemental note 2 for further discussion. Race categories exclude persons of Hispanic ethnicity.

## Time Spent on Homework

Table 21-1. Percentage distribution of 10th-graders reporting time spent on homework, by hours spent on homework per week: 1980 and 2002

| Hours spent per week | All |  | Male |  | Female |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1980 | 2002 | 1980 | 2002 | 1980 | 2002 |
| Total | 100 | 100 | 100 | 100 | 100 | 100 |
| Less than 1 | 17 | 2 | 21 | 2 | 13 | 1 |
| Between 1 and 3 | 29 | 21 | 31 | 24 | 28 | 19 |
| More than 3 but less than 5 | 25 | 14 | 24 | 14 | 26 | 14 |
| Between 5 and 10 | 22 | 26 | 18 | 26 | 25 | 26 |
| More than 10 | 7 | 37 | 6 | 33 | 8 | 41 |

NOTE:Caution must be used when interpreting the estimates reported here because the survey method used to ask about time spent on homework per week differed in 1980 and 2002 . The 1980 survey asked about"homework" without differentiating between homework completed in school and out of school;it also used the categories reported here as predefined response categories. The 2002 survey asked separately about in-school and out-of-school homework and used an open-ended response format. The 2002 responses to both questions were then grouped into the 1980 response categories. Detail may not sum to totals because of rounding.

| West Virginia | 75.9 | 18,440 | 74.2 | 17,128 | 75.7 | 17,287 | 76.9 | 17,339 |
| Wisconsin | 83.3 | 59,341 | 84.8 | 60,575 | 85.8 | 63,272 | $85.8{ }^{4}$ | 62,784 ${ }^{4}$ |
| Wyoming | 73.4 | 6,071 | 74.4 | 6,106 | 73.9 | 5,845 | 76.0 | 5,833 |

$\dagger$ Not applicable.
${ }^{1}$ The rate is the number of graduates divided by the estimated count offreshmen 4 years earlier.The estimated averaged freshman enrollment count is the sum of the number of 8th-graders 5 years earlier, the number of 9 th-graders 4 years earlier (because this is when current year seniors were freshmen), and the number of 10 th-graders 3 years earlier, divided by 3 . Enrollment counts include a proportional distribution of students not enrolled in a specific grade.
${ }^{2}$ Graduates include only those who earned regular diplomas or diplomas for advanced academic achievement (e.g., honors diploma) as defined by the state or district.
${ }^{3}$ The 2003-04 national estimates include imputed data from two states that did not report diploma counts:New York and Wisconsin.
${ }^{4}$ To impute the number of graduates in these states in 2003-04, the 2002-03 averaged freshman graduation rates for Wisconsin and New York were applied to the average of the grade specific enrollment data in the state for grade 8 in 1999-2000, grade 9 in 2000-01, and grade 10 in 2001-02.

— Not available. Data on family income were not available in 1974.
$\dagger$ Not applicable because data for one of the three consecutive years are not available or one of the years is not applicable.
${ }^{1}$ Low income refers to the bottom 20 percent of all family incomes, high income refers to the top 20 percent of all family incomes, and middle income refers to the 60 percent in between. See supplemental note 2 for further information.
${ }^{2}$ Included in the total but not shown separately are high school completers from other racial/ethnic groups. Race categories exclude persons of Hispanic ethnicity.
${ }^{3}$ Due to small sample sizes for the low-income, Black, and Hispanic categories, 3 -year averages also were calculated for each category. For example,the 3-year average for Blacks in 1977 is the average percentage of Black high school completers ages 16-24 who were enrolled in college the October after completing high school in 1976, 1977, and 1978.
NOTE: Includes those ages 16-24 completing high school in a given year. The Current Population Survey (CPS) questions about educational attainment were reworded in 1992. Before then, high school completers referred to those who completed 12 years of schooling; beginning in 1992, the term referred to those who received a high school diploma or equivalency certificate.In 1994, the survey methodology for the CPS was changed and weights were adjusted. See supplemental note 2 for further information. Detail may not sum to totals because of rounding. Some estimates have been revised from previous publications.

- Not available. Data on type of institution were not collected until 1973.
${ }^{1}$ From 1973 through 1986, due to a skip pattern in the Current Population Survey (CPS), about 3-9 percent of high school completers ages 16-24 who enrolled in college immediately were not asked the question about the type of institutions attended. Such respondents were assumed to have the same probability of enrolling at a 2-or 4-year institution as those who were asked the question.
NOTE:Includes those ages 16-24 completing high school in a given year.The Current Population Survey (CPS) questions about educational attainment were reworded in 1992. Before then, high school completers referred to those who completed 12 years of schooling; beginning in 1992, the term referred to those who received a high school diploma or equivalency certificate. In 1994,the survey methodology for the CPS was changed and weights were adjusted. See supplemental note 2 for further information. Detail may not sum to totals because of rounding.
SOURCE:U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October Supplement, 1972-2005.

## Immediate Transition to College

Table 25-3. Percentage of high school completers who were enrolled in college the October immediately following high school completion, by parents' education: 1992-2005

| Year | Total | Less than high school | High school diploma or equivalent | Some college, including vocational/ technical | Bachelor's degree or higher | Not available ${ }^{1}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1992 | 61.9 | 33.1 | 55.5 | 67.5 | 81.3 | 38.0 |
| 1993 | 62.6 | 47.1 | 52.3 | 62.7 | 87.9 | 42.0 |
| 1994 | 61.9 | 43.0 | 49.9 | 65.0 | 82.5 | 43.1 |
| 1995 | 61.9 | 27.3 | 47.0 | 70.2 | 87.7 | 30.8 |
| 1996 | 65.0 | 45.0 | 56.1 | 66.6 | 85.2 | 45.6 |
| 1997 | 67.0 | 51.4 | 61.7 | 62.6 | 86.1 | 51.3 |
| 1998 | 65.6 | 49.8 | 57.2 | 67.7 | 82.3 | 50.1 |
| 1999 | 62.9 | 36.3 | 54.4 | 60.3 | 82.2 | 53.1 |
| 2000 | 63.3 | 44.4 | 51.8 | 63.8 | 81.2 | 50.5 |
| 2001 | 61.7 | 39.0 | 51.9 | 62.0 | 81.3 | 41.9 |
| 2002 | 65.2 | 43.3 | 51.9 | 65.9 | 82.6 | 58.7 |
| 2003 | 63.9 | 43.3 | 53.9 | 62.9 | 82.1 | 48.8 |
| 2004 | 66.7 | 39.6 | 54.7 | 66.5 | 85.8 | 54.4 |
| 2005 | 68.6 | 43.0 | 62.1 | 65.6 | 88.8 | 54.8 |

${ }^{1}$ IIfformation on parents' education was not available for those who did not live with their parents and were classified as a householder, and for those whose parents' educational attainment was not reported; about $9-14$ percent of high school completers ages $16-24$ were in this category for the period covered.
NOTE:Includes those ages 16-24 completing high school in a given year. High school completers referred to those who received a high school diploma or equivalency certificate. In 1994, the survey methodology for the CPS was changed and weights were adjusted. See supplemental note 2 for further information, including that on definition of parents' education.

| 2002-03 | 632,900 | 1,348,500 | 512,600 | 80,800 | 46,000 |
| 2003-04 | 665,300 | 1,399,500 | 558,900 | 83,000 | 48,400 |
| 2004-05 | 696,700 | 1,439,300 | 574,600 | 87,300 | 52,600 |
| Increase in the number of degrees conferred between 1976-77 and 2004-05 | 291,700 | 521,400 | 258,000 | 23,300 | 19,500 |
| Percentage change in the number of degrees conferred between 1976-77 and 2004-05 | 72 | 57 | 81 | 36 | 59 |

${ }^{1}$ An award that requires completion of a degree program that meets all of the following criteria: ( 1 ) completion of the academic requirements to begin practice in the profession; (2) at least 2 years of college work before entering the degree program; and (3) a total of at least 6 academic years of college work to complete the degree program, including previously required college work plus the work required in the professional program itself. See glossary for a complete list of first-professional degrees.
${ }^{2}$ Includes Ph.D., Ed.D, and comparable degrees at the doctoral level. Excludes first-professional degrees, such as M.D., D.D.S., and law degrees.
NOTE:Detail in accompanying tables may not sum to totals shown here because of rounding.

Increase in the
number of degrees
conferred between
1976-77 and

Percentage change
in the number of
degrees conferred
between 1976-77

$\dagger$ Not applicable.
${ }^{1}$ Excludes 106 men whose racial/ethnic group was not available.
${ }^{2}$ Excludes 116 men and 3 women whose racial/ethnic group was not available.
${ }^{3}$ Excludes 404 men and 232 women whose racial/ethnic group was not available.
${ }^{4}$ Excludes 51 men and 10 women whose racial/ethnic group was not available.
NOTE:Includes Ph.D.,Ed.D, and comparable degrees at the doctoral level. Excludes first-professional degrees, such as M.D.,D.D.S., and law degrees. For years 1984-85 through 2004-05, reported racial/ethnic distributions of students by level of degree, field of degree, and sex were used to estimate race/ethnicity for students whose race/ethnicity was not reported. Race categories exclude persons of Hispanic ethnicity. Detail may not sum to totals because of rounding.

${ }^{1}$ Included in the total but not shown separately are estimates for those from other racial/ethnic categories.
NOTE:Prior to 1992, high school completers referred to those who completed 12 years of schooling; beginning in 1992, the term referred to those who received a high school diploma or equivalency certificate. In 1994, the survey instrument for the Current Population Survey (CPS) was changed and weights were adjusted. See supplemental note 2 for further discussion. Some estimates are revised from previous publications. Race categories exclude persons of Hispanic ethnicity.

! Interpret data with caution (estimates are unstable).
'Included in the totals but not shown separately are estimates for those from other racial/ethnic categories.
NOTE:Some college also includes those with a bachelor's degree or higher. Prior to 1992, some college referred to those who completed 1 or more years of college; beginning in 1992, the term referred to those who completed any college at all. In 1994, the survey instrument for the Current Population Survey (CPS) was changed and weights were adjusted. See supplemental note 2 . Some estimates are revised from previous publications. Race categories exclude persons of Hispanic ethnicity.

| One-parent or guardian-only household | 30.7 | 6.1 | 12.2 | 3.6 | 5.5 | 13.9 | 6.4 | 20.5 |

See notes at end of table.

## Afterschool Activities

Table 29-1. Percentage of kindergarten through 8th-grade students who participated in various afterschool activities since the beginning of the school year, by student and school characteristics: 2005-Continued

| Student or school characteristic | Any activity | Activity |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Academic activities | Arts | Clubs | Community service | Religious activities | Scouts | Sports |
| Community type ${ }^{5}$ |  |  |  |  |  |  |  |  |
| Urban | 43.6 | 7.4 | 18.6 | 5.7 | 8.2 | 19.6 | 10.4 | 31.4 |
| Rural | 41.6 | 4.9 | 15.3 | 5.8 | 7.9 | 20.2 | 9.6 | 30.0 |
| School type |  |  |  |  |  |  |  |  |
| Public | 41.7 | 6.4 | 17.0 | 5.5 | 7.5 | 19.6 | 9.9 | 29.6 |
| Private | 54.7 | 10.3 | 25.6 | 7.6 | 13.2 | 20.4 | 12.4 | 42.9 |

! Interpret data with caution (estimates are unstable).
${ }^{1}$ Race categories exclude persons of Hispanic ethnicity.
${ }^{2}$ Poor is defined to include families below the poverty threshold, near-poor is defined to include families at 100-199 percent of the poverty threshold, and nonpoor is defined to include families at 200 percent or more than the poverty threshold.
${ }^{3}$ Parents' education based on highest level of education attained by either parent.
${ }^{4}$ Only includes children who had a mother in the household. Not employed includes both (1) mothers who are seeking work but unemployed and (2) mothers not in the labor force.
${ }^{5}$ Community type is based on a U.S. Census classification of places. Urban is a place with at least 50,000 people and includes both inside urbanized areas and outside urbanized areas. Rural is a place not classified as urban. NOTE: Homeschooled students and students older than 15 years are excluded. When asked about their children's participation in various afterschool activities, parents could respond either"yes" or"no."The percentage of parents who responded "yes" for each activity is shown. Children could participate in multiple activities; therefore, percentages may sum to more than 100 .

## Student/Teacher Ratios in Public Elementary and Secondary Schools

Table 30-1. Student/teacher ratios in public schools, by type, level, and enrollment of school:Selected years, Fall 1990-2004

| Type, level, and enrollment of school | Year |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1990 | 1992 | 1994 | 1996 | 1998 | 2000 | 2002 | 2004 |
| All schools | 17.4 | 17.7 | 17.7 | 17.6 | 16.9 | 16.4 | 16.2 | 16.2 |
| Regular schools | 17.6 | 17.8 | 17.8 | 17.7 | 17.0 | 16.5 | 16.3 | 16.3 |
| Elementary schools | 18.2 | 18.1 | 18.0 | 17.9 | 17.0 | 16.5 | 16.2 | 16.0 |
| Under 300 | 16.0 | 15.9 | 15.7 | 15.6 | 15.1 | 14.4 | 13.9 | 13.7 |
| 300-499 | 17.6 | 17.5 | 17.5 | 17.2 | 16.4 | 15.8 | 15.5 | 15.3 |
| 500-999 | 18.8 | 18.7 | 18.5 | 18.3 | 17.4 | 16.9 | 16.7 | 16.5 |
| 1,000-1,499 | 19.5 | 19.7 | 19.6 | 19.4 | 18.4 | 18.1 | 18.0 | 17.7 |
| 1,500 or more | 19.9 | 20.3 | 20.4 | 21.2 | 19.9 | 20.5 | 20.3 | 20.5 |
| Secondary schools | 16.7 | 17.4 | 17.6 | 17.6 | 17.1 | 16.7 | 16.8 | 16.9 |
| Under 300 | 12.3 | 12.3 | 12.7 | 12.7 | 12.5 | 12.0 | 12.0 | 12.0 |
| 300-499 | 14.9 | 15.3 | 15.7 | 15.5 | 15.1 | 14.5 | 14.4 | 14.7 |
| 500-999 | 16.1 | 16.7 | 16.8 | 16.7 | 16.2 | 15.8 | 15.8 | 15.9 |
| 1,000-1,499 | 17.2 | 17.9 | 17.9 | 17.9 | 17.2 | 16.8 | 16.9 | 17.0 |
| 1,500 or more | 19.3 | 20.0 | 19.9 | 20.0 | 19.3 | 18.9 | 18.8 | 19.0 |
| Combined schools | 15.8 | 15.8 | 16.1 | 15.7 | 14.6 | 14.9 | 15.2 | 15.2 |
| Under 300 | 11.0 | 10.9 | 11.3 | 10.0 | 10.4 | 10.4 | 10.8 | 10.3 |
| 300-499 | 14.8 | 14.5 | 14.4 | 14.6 | 14.1 | 13.9 | 14.1 | 14.2 |
| 500-999 | 16.7 | 15.8 | 16.5 | 16.6 | 15.6 | 15.9 | 16.2 | 15.9 |
| 1,000-1,499 | 17.8 | 18.5 | 18.1 | 17.9 | 17.2 | 17.6 | 18.1 | 17.6 |
| 1,500 or more | 19.0 | 19.8 | 20.0 | 19.6 | 18.9 | 20.0 | 20.7 | 19.4 |
| Alternative | 14.2 | 16.5 | 18.0 | 16.6 | 16.4 | 15.2 | 14.9 | 14.4 |
| Special education | 6.5 | 7.0 | 6.9 | 7.4 | 7.3 | 7.0 | 7.0 | 7.4 |
| Vocational | 13.0 | 13.0 | 12.9 | 12.9 | 13.1 | 12.7 | 9.9 | 11.5 |

NOTE:The student/teacher ratio is determined by dividing the total number of full-time-equivalent teachers into the total enrollment. Regular schools include all schools except special education schools, vocational schools, and alternative schools. Combined schools include both elementary and secondary grades. This analysis excludes schools that did not report both enrollment and teacher data. See supplemental note 3 for more information about the Common Core of Data (CCD).

Table 31-2. Percentage distribution of students ages 6-21 with disabilities served by the Individuals with Disabilities Education Act, by placement in educational environment and race/ethnicity:2004-05

| Race/ethnicity ${ }^{1}$ | In a general school |  |  |  | Not in a general school |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Percentage of day in a general education classroom |  |  | Total | Percentage by facility type |  |  |  |  |
|  |  | 80 <br> percent <br> or more | $\begin{array}{r} 79-40 \\ \text { percent } \end{array}$ | Less <br> than 40 percent |  | Separate school facility |  | Residential facility |  | Homebound/ hospital |
|  |  |  |  |  |  | Public | Private | Public | Private |  |
| Total | 96.0 | 52.1 | 26.3 | 17.5 | 4.0 | 1.8 | 1.2 | 0.3 | 0.3 | 0.4 |
| White | 96.3 | 56.8 | 26.1 | 13.3 | 3.7 | 1.6 | 1.1 | 0.3 | 0.3 | 0.4 |
| Black | 94.5 | 41.0 | 27.2 | 26.2 | 5.5 | 2.5 | 1.7 | 0.5 | 0.4 | 0.4 |
| Hispanic | 96.8 | 47.8 | 26.8 | 22.1 | 3.2 | 1.5 | 0.9 | 0.2 | 0.2 | 0.4 |
| Asian/Pacific Islander | 95.9 | 50.1 | 22.4 | 23.4 | 4.1 | 2.0 | 1.3 | 0.2 | 0.2 | 0.4 |
| American Indian/ |  |  |  |  |  |  |  |  |  |  |
| Alaska Native | 97.2 | 50.9 | 33.0 | 13.2 | 2.8 | 1.1 | 0.5 | 0.4 | 0.4 | 0.4 |

${ }^{1}$ Race categories exclude persons of Hispanic ethnicity.
NOTE:Students with disabilities are those students served under"Assistance for education of all children with disabilities" (Part B) of the Individuals with Disabilities Education Act in the United States and outlying areas. See supplemental note 8 for further information. A separate school facility (public or private) refers to programs offering education services only to students with disabilities for more than 50 percent of the school day. A residential facility includes children who are served in publicly or privately operated programs in which children receive special education or related services for more than 50 percent of the school day. Homebound/hospital refers to educational services given to students in either a home or hospital setting, including those receiving special education and related services in the home that are provided by a professional or paraprofessional who visits the home on a regular basis or schedule. Data are taken from a universe survey. Detail may not sum to totals because of rounding.

- Not available.
\# Rounds to zero.
! Interpret data with caution (estimates are unstable).
${ }^{1}$ Included in the totals, but not shown separately, are full-time teachers of combined elementary and secondary schools.
${ }^{2}$ Roughly 3,250 cases were missing data for the school-level variable in 1993-94; these cases were excluded from the school-level analyses.
${ }^{3}$ Estimates are for teachers who reported that they had participated in a teacher induction program and for those who had worked with a mentor or master teacher, respectively, in their first year of teaching. These questions were only asked of teachers with 4 or fewer years of teaching experience.
${ }^{4}$ Main teaching assignment only. About 16.5 percent of full-time teachers reported having multiple main assignments. For such teachers, the subject listed first in their response was counted as the main assignment.
${ }^{5}$ The Regular certification category includes regular or standard state certificates and advanced professional certificates (for both public and private school teachers) and full certificates granted by an accrediting or certifying body other than the state (for private school teachers only). Provisional certificates are for those who are still participating in an "alternative certification program." Probationary certificates are for those who have satisfied all requirements except the completion of a probationary period. Temporary certificates are for those who require additional college coursework and/or student teaching. Emergency certificates or waivers are for those with insufficient teacher preparation who must complete a regular certification program in order to continue teaching.
NOTE:Detail may not sum to totals because of rounding. See supplemental note 3 for more information on the Schools and Staffing Survey (SASS).

## - Not available.

! Interpret data with caution (estimates are unstable).
\# Rounds to zero.
${ }^{1}$ Included in the totals but not shown separately are principals of combined elementary and secondary schools.
${ }^{2}$ Roughly 900 cases were missing data for the school level variable in 1993-94; these cases were excluded from the school-level analyses.
${ }^{3}$ Race categories exclude persons of Hispanic ethnicity. Before 2003-04, Asian and Pacific Islander were not reported separately; therefore, Pacific Islander is included in Asian for the 1993-94 and 1999-2000 survey administrations.
${ }^{4}$ At least 1 year beyond the master's level.
${ }^{5}$ An award that requires completion of a degree program that meets all of the following criteria: (1) completion of the academic requirements to begin practice in the profession; (2) at least 2 years of college work before entering the degree program; and (3) a total of at least 6 academic years of college work to complete the degree program, including previously required college work plus the work required in the professional program itself. See glossary for a complete list of first-professional degrees.
NOTE:Data are only for principals, not assistant principals. Principals from Bureau of Indian Affairs schools were excluded from the analysis. Detail may not sum to totals because of rounding. See supplemental note 3 for more information on the Schools and Staffing Survey (SASS). Some estimates have been revised from previous publications.

| Capital outlay and interest | 836 | 847 | 1,221 | 1,467 | 11.6 | 12.2 | 15.1 | 16.4 |
| Other ${ }^{1}$ | 1,424 | 1,351 | 1,533 | 1,759 | 19.7 | 19.5 | 18.9 | 19.7 |

${ }^{1}$ Other expenditures include funds for student support, other instructional staff, other student transportation, other support services, food services, and enterprise operations, all of which are components of current expenditures. Also included in other expenditures are funds for adult education, community colleges, private school programs funded by local and state education agencies, and community services.
NOTE: Detail may not sum to totals because of rounding. Estimates are revised from previous publications. Expenditures are in constant 2003-04 dollars, adjusted using the Consumer Price Index (CPI). See supplemental note 11 for information about this index and about classifications of expenditures for elementary and secondary education. See supplemental note 1 for information on regional categorizations. See supplemental note 3 for more information about the Common Core of Data (CCD).

## Variations in Instruction Expenditures per Student

Table 39-1. Variation and percentage distribution of variation in instruction expenditures in unified public elementary and secondary school districts, by source of variation: 1989-90 to 2003-04

| School year | Theil coefficient ${ }^{1}$ | Between-state component | Within-state component | Percentage distribution |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Theil coefficient ${ }^{1}$ | Between-state component | Within-state component |
| 1989-90 | 0.0448 | 0.0322 | 0.0125 | 100.0 | 72.0 | 28.0 |
| 1990-91 | 0.0469 | 0.0346 | 0.0123 | 100.0 | 73.8 | 26.2 |
| 1991-92 | 0.0434 | 0.0320 | 0.0115 | 100.0 | 73.6 | 26.4 |
| 1992-93 | 0.0437 | 0.0324 | 0.0113 | 100.0 | 74.2 | 25.8 |
| 1993-94 | 0.0405 | 0.0301 | 0.0104 | 100.0 | 74.3 | 25.7 |
| 1994-95 | 0.0389 | 0.0288 | 0.0100 | 100.0 | 74.2 | 25.8 |
| 1995-96 | 0.0373 | 0.0279 | 0.0094 | 100.0 | 74.8 | 25.2 |
| 1996-97 | 0.0349 | 0.0257 | 0.0092 | 100.0 | 73.7 | 26.3 |
| 1997-98 | 0.0332 | 0.0246 | 0.0086 | 100.0 | 74.0 | 26.0 |
| 1998-99 | 0.0335 | 0.0249 | 0.0087 | 100.0 | 74.2 | 25.8 |
| 1999-2000 | 0.0337 | 0.0253 | 0.0085 | 100.0 | 74.9 | 25.1 |
| 2000-01 | 0.0370 | 0.0280 | 0.0090 | 100.0 | 75.7 | 24.3 |
| 2001-02 | 0.0373 | 0.0283 | 0.0089 | 100.0 | 76.1 | 23.9 |
| 2002-03 | 0.0391 | 0.0303 | 0.0088 | 100.0 | 77.6 | 22.4 |
| 2003-04 | 0.0420 | 0.0327 | 0.0093 | 100.0 | 77.9 | 22.1 |

${ }^{1}$ The Theil coefficient measures variation for groups within a set (i.e.,states within the country) and indicates relative variation and any differences that may exist among them. It can be decomposed into components measuring between-state and within-state variation in expenditures per student. It has a minimum value of zero and increasing values indicate increases in the variation. See supplemental note 11 for more information.
NOTE: Detail may not sum to totals because of rounding. Public elementary and secondary unified districts are those districts that serve both elementary and secondary grades. In 2003-04, approximately 71 percent of all school districts were unified school districts.

## Public Elementary and Secondary Expenditures by District Poverty

## Table 40-1. Total expenditures per student in fall enrollment in public school districts and percent change, by district poverty level:Various years, 1995-96

 to 2003-04| District poverty level ${ }^{1}$ | [In constant 2003-04 dollars] |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total expenditures per student ${ }^{2}$ |  |  |  |  |  |  | Percent change from 1995-96 to 2003-04 |
|  | 1995-96 | 1997-98 | 1999-2000 | 2000-01 | 2001-02 | 2002-03 | 2003-04 |  |
| Total | \$7,847 | \$8,239 | \$8,884 | \$9,217 | \$9,523 | \$9,630 | \$9,754 | 24.3 |
| Low | 8,936 | 9,195 | 9,817 | 10,191 | 10,689 | 10,768 | 10,857 | 21.5 |
| Middle low | 7,754 | 8,116 | 8,832 | 9,110 | 9,352 | 9,419 | 9,496 | 22.5 |
| Middle | 7,336 | 7,701 | 8,206 | 8,471 | 8,736 | 8,839 | 9,042 | 23.3 |
| Middle high | 7,117 | 7,538 | 8,357 | 8,605 | 8,911 | 8,927 | 9,045 | 27.1 |
| High | 8,095 | 8,645 | 9,205 | 9,709 | 9,939 | 10,191 | 10,377 | 28.2 |

${ }^{1}$ District poverty was determined by ranking school districts by the percentage of related children ages $5-17$ from families with an income below the poverty threshold to all district children ages $5-17$, and then dividing these districts into five categories with equal proportions of the total enrollment. The low-poverty district category consists of the 20 percent of students in districts with the lowest percentages of poor school-age children. Conversely, the high-poverty district category consists of the 20 percent of students in districts with the highest percentages of poor school-age children. See supplemental note 1 for further information on poverty.
${ }^{2}$ Total expenditures have been adjusted for the effects of inflation using the Consumer Price Index (CPI) and are in constant 2003-04 dollars. See supplemental note 11.
NOTE:Total expenditures include current expenditures for regular school programs, capital outlay, and interest on school debt. Data are for regular districts, elementary/secondary combined districts, and separate elementary or secondary districts. They exclude Department of Defense districts and Bureau of Indian Affairs districts. See supplemental note 11 for further information about the accounting terms used in this indicator. ## - Not available.

! Interpret data with caution (estimates are unstable).
'Per student expenditures are calculated based on public and private full-time-equivalent (FTE) enrollment figures for the 2002-03 school year and on current expenditures and capital outlays from both public and private sources where data are available.
${ }^{2}$ Includes postsecondary nontertiary data (International Standard Classification of Education [ISCED] level 4) for Australia, Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Japan, Netherlands, New Zealand, Norway, Poland, Slovak Republic, Spain, Sweden, Switzerland, and the United Kingdom. Also includes preprimary data (ISCED level 0) for Canada, Greece, and Luxembourg.
${ }^{3}$ Includes all tertiary-level data (ISCED levels 5A, 5B, and 6). Also, includes postsecondary nontertiary data for Canada, Denmark, Iceland, and Japan.
${ }^{4}$ Total includes elementary/secondary, postsecondary, and postsecondary nontertiary expenditures with the exception of Italy, Korea, Luxembourg, Mexico, Portugal, Turkey, and the United States where data for postsecondary nontertiary are either not applicable or not available.
${ }^{5}$ Data are for 2002
${ }^{6}$ Public institutions only.
${ }^{7}$ Luxembourg data are excluded from percentages because of anomalies with respect to their GDP per capita data (large revenues from international finance institutions distort the wealth of the population). Luxembourg has no postsecondary institutions.
NOTE: Educational expenditures are from public and private revenue sources. Purchasing power parity (PPP) indices are used to convert other currencies to U.S. dollars. Private sources include payments from households for school-based expenses such as tuition, transportation fees, book rentals, or food services, as well as funds raised by institutions through endowments or returns on investment. Within-country consumer price indices are used to adjust the PPP indices to account for inflation because the fiscal year has a different starting date in different countries. See supplemental note 6 for more information on ISCED levels.

${ }^{1}$ Includes other fields not shown separately.
${ }^{2}$ Includes Ph.D., Ed.D., and comparable degrees at the doctoral level.
${ }^{3}$ An award that requires completion of a degree program that meets all of the following criteria: (1) completion of the academic requirements to begin practice in the profession; (2) at least 2 years of college work before entering the degree program; and (3) a total of at least 6 academic years of college work to complete the degree program, including previously required college work plus the work required in the professional program itself. See glossary for a complete list of first-professional degrees.
NOTE:The new Classification of Instructional Programs was initiated in 2002-03. The figures for earlier years have been reclassified when necessary to conform to the new taxonomy. Seesupplemental note 10 for more information on fields of study. Detail may not sum to totals because of rounding. See supplemental note 3 for more information about the Integrated Postsecondary Education Data System (IPEDS).

## -Not available.

${ }^{1}$ Includes journalism, agriculture, and services.
${ }^{2}$ Each country contributes equally to the OECD mean
${ }^{3}$ Each country contributes to the OECD mean in proportion to the number of degrees awarded by that country.
${ }^{4}$ Included under science.
NOTE:Includes academic degrees conferred at International Standard Classification of Education (ISCED), levels 5 A and 6 . Data include all degrees awarded by institutions located in the country, even when the degree awards were made to foreign students. These levels correspond to bachelor's, master's, first-professional, and doctoral degrees in the United States. See supplemental note 6 for more information about the International Standard Classifcation of Education. Detail may not sum to totals because of rounding.

\#Rounds to zero.
${ }^{1}$ Total compensation is the sum of salary and fringe benefits. Salary does not include outside income. Fringe benefits may include, for example, retirement plans, medical/dental plans, group life insurance, or other benefits.
${ }^{2}$ Institutions in this indicator are classified based on the number of highest degrees awarded. For example, institutions that award 20 or more doctoral degrees per year are classified as doctoral universities. See supplemental note 9 for more information about classifications of postsecondary institutions.
NOTE:Full-time instructional faculty on less-than-9-month contracts were excluded. In 2005-06, there were about 3,600 of these faculty, accounting for less than 1 percent of all full-time instructional faculty at degree-granting institutions. Salaries, benefits, and compensation adjusted by the Consumer Price Index (CPI) to constant 2003-04 dollars. Detail may not sum to totals because of rounding. See supplemental note 11 for more information about the CPI. See supplemental note 3 for more information about the Integrated Postsecondary Education Data System (IPEDS).

[^17]Employment of College Students

## Federal Grants and Loans to Undergraduate Students

Table 46-1. Percentage of full-time, full-year undergraduates who received loans and grants, average annual amounts received by recipients, and average percentage of aid received as loans, by source of aid, dependency status, income, and type of institution: 1992-93, 1999-2000, and 2003-04

| Dependency status, income, and type of institution | [In constant 2003-04 dollars] Total |  |  |  |  | Federal |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Loans |  | Grants |  | Loans as percent of total aid | Loans |  | Grants |  | Loans as percent of federal aid |
|  | Percent | Average dollars | Percent | Average dollars |  | Percent | Average dollars | Percent | Average dollars |  |
| 1992-93 |  |  |  |  |  |  |  |  |  |  |
| Total | 32.4 | \$4,600 | 49.3 | \$4,600 | 33.7 | 31.5 | \$4,400 | 29.7 | \$2,600 | 53.7 |
| Dependency status and income |  |  |  |  |  |  |  |  |  |  |
| Dependent undergraduates | 28.3 | 4,100 | 43.2 | 5,000 | 32.2 | 27.2 | 3,900 | 20.6 | 2,500 | 59.2 |
| Low-income | 48.8 | 3,900 | 79.2 | 5,200 | 27.5 | 48.4 | 3,800 | 68.3 | 2,800 | 38.1 |
| Middle-income | 32.0 | 4,200 | 42.9 | 5,000 | 37.3 | 30.9 | 4,000 | 15.1 | 1,700 | 72.1 |
| High-income | 15.1 | 4,600 | 25.4 | 4,800 | 31.4 | 13.3 | 4,100 | 1.0 | 1,900 | 88.0 |
| Independent undergraduates | 43.1 | 5,200 | 64.9 | 3,800 | 36.5 | 42.5 | 5,200 | 53.1 | 2,800 | 45.9 |
| Type of institution |  |  |  |  |  |  |  |  |  |  |
| Public 2-year | 11.8 | 3,100 | 42.5 | 2,500 | 16.1 | 11.4 | 3,100 | 30.3 | 2,300 | 23.1 |
| Public 4-year | 31.7 | 4,200 | 44.1 | 3,400 | 38.3 | 30.8 | 4,100 | 27.2 | 2,600 | 57.1 |
| Private not-for-profit 4-year | 45.8 | 5,100 | 63.2 | 7,900 | 30.7 | 44.0 | 4,800 | 27.0 | 3,000 | 65.1 |
| 1999-2000 |  |  |  |  |  |  |  |  |  |  |
| Total | 45.1 | \$6,000 | 58.8 | \$5,500 | 40.6 | 43.9 | \$5,300 | 30.5 | \$2,800 | 64.0 |
| Dependency status and income |  |  |  |  |  |  |  |  |  |  |
| Dependent undergraduates | 43.8 | 5,400 | 56.2 | 6,000 | 39.6 | 42.6 | 4,600 | 23.1 | 2,700 | 68.4 |
| Low-income | 47.8 | 5,300 | 83.2 | 6,100 | 26.1 | 46.9 | 4,700 | 72.4 | 3,000 | 36.6 |
| Middle-income | 47.9 | 5,400 | 53.7 | 6,000 | 45.1 | 46.6 | 4,600 | 13.1 | 1,800 | 81.2 |
| High-income | 33.4 | 5,700 | 38.7 | 5,800 | 44.4 | 31.9 | 4,700 | 0.7 | 1,800 | 94.6 |
| Independent undergraduates | 48.5 | 7,500 | 65.9 | 4,200 | 43.1 | 47.6 | 7,000 | 51.1 | 2,900 | 54.5 |
| Type of institution |  |  |  |  |  |  |  |  |  |  |
| Public 2-year | 17.1 | 4,300 | 49.7 | 2,900 | 21.0 | 16.3 | 3,700 | 32.4 | 2,700 | 30.5 |
| Public 4-year | 48.4 | 5,500 | 54.5 | 4,200 | 48.3 | 47.4 | 5,200 | 28.9 | 2,700 | 70.2 |
| Private not-for-profit 4-year | 59.9 | 6,900 | 75.0 | 9,200 | 35.9 | 58.2 | 5,600 | 27.5 | 3,000 | 71.9 |
| 2003-04 |  |  |  |  |  |  |  |  |  |  |
| Total | 49.5 | \$6,200 | 63.1 | \$5,700 | 41.2 | 47.9 | \$5,300 | 33.6 | \$3,300 | 62.8 |

| High-income | 39.8 | 5,800 | 43.5 | 5,900 | 46.1 | 37.9 | 4,200 | 1.1 | 1,800 | 92.4 |
| Independent undergraduates | 56.5 | 7,500 | 70.2 | 4,600 | 46.0 | 55.4 | 7,000 | 55.3 | 3,400 | 56.0 |
| Type of institution |  |  |  |  |  |  |  |  |  |  |
| Public 2-year | 22.8 | 4,100 | 52.7 | 3,400 | 24.7 | 21.6 | 3,800 | 35.4 | 3,200 | 34.1 |
| Public 4-year | 51.4 | 5,800 | 59.1 | 4,600 | 46.9 | 49.7 | 5,200 | 30.2 | 3,200 | 68.7 |
| Private not-for-profit 4-year | 65.8 | 7,200 | 81.5 | 9,400 | 35.8 | 64.1 | 5,400 | 31.6 | 3,400 | 70.3 |

NOTE:Total loans include federal, State, institutuional, and private loans. Total grants include federal, state, institutional, and private grants, including employer reimbursements. Federal loans include Perkins, subsidized and unsubsidized Stafford, and Supplemental Loans to Students (SLS). Federal grants are primarily Pell Grants and Supplemental Educational Opportunity Grants (SEOG) but also include Byrd scholarships. Parent Loans for Undergraduate Students (PLUS) loans to parents, veterans' benefits, and tax credits are not included in this table. Loans as a percentage of aid is determined by dividing the amount of loans received (including zero loan amounts) by the amount of total aid (or federal aid) received for each case. Income for financially dependent students is based on parents' annual income in the prior year.The cutoff points for low, middle, and high income were obtained by identifying the incomes at the 25th and 7 5th percentiles. Adjusted to constant 2003-04 dollars, the values were in 1992-93, $\$ 39,200$ and $\$ 84,900$; in $1999-2000, \$ 35,700$ and $\$ 94,100$; and in 2003-04, $\$ 34,200$ and $\$ 94,400$. Data adjusted by the Consumer Price Index for All Urban Consumers (CPI-U) to constant 2003-04 dollars. See supplemental note 11 for more information about the CPI-U.

## Total and Net Access Price of Attending a Postsecondary Institution

| [In constant 2003-04 dollars] |  |  |  |
| :---: | :---: | :---: | :---: |
| Type of institution, price, and aid | 1989-90 | 1999-2000 | 2003-04 |
| Public 2-year |  |  |  |
| Total price | \$8,000 | \$9,400 | \$9,800 |
| Loans | 200 | 500 | 700 |
| Grants | 700 | 1,200 | 1,400 |
| Net access price | 7,100 | 7,700 | 7,700 |
| Public 4-year |  |  |  |
| Total price | 10,900 | 13,600 | 15,100 |
| Loans | 900 | 2,700 | 3,200 |
| Grants | 1,300 | 2,100 | 2,600 |
| Net access price | 8,700 | 8,800 | 9,300 |
| Private not-for-profit 4-year |  |  |  |
| Total price | 21,200 | 26,800 | 29,500 |
| Loans | 2,200 | 5,300 | 6,100 |
| Grants | 4,400 | 7,500 | 8,000 |
| Net access price | 14,700 | 14,000 | 15,300 |
| Private for-profit less-than-4-year |  |  |  |
| Total price | 16,100 | 17,500 | 18,100 |
| Loans | 3,400 | 5,900 | 6,300 |
| Grants | 1,800 | 2,000 | 2,600 |
| Net access price | 10,900 | 9,600 | 9,300 |
| NOTE:Net access price is an estimate of the cash outlay that students and their families need to make in a given year to cover educational expenses. It is calculated here as the total price of attendance minus grants and loans. Full time means students attended full time (as defined by the institution) for the full year (at least 9 months at a 2- or 4 -year institution or 6 months at a less-than-4-year institution). Loans promote access to postsecondary education by providing the cash needed to enroll. However, because the funds must be repaid (with interest), loans defer rather than reduce the price of attending. Information on the use of tax credits by individual families is not available and therefore could not be taken into account in calculating net access price. Averages were computed for all students, including those who did not receive financial aid. Data adjusted by the Consumer Price Index for All Urban Consumers (CPI-U) to 2003-04 dollars. See supplemental note 11 for more information about the CPI-U. Estimates exclude students who were not U.S. citizens or permanent residents, and therefore were ineligible for federal student aid; students who attended more than one institution in a year, because of the difficulty matching information on price and aid; and students who attended private for-profit 4 -year institutions, because of their small number. Detail may not sum to totals because of rounding. <br> SOURCE:U.S. Department of Education, National Center for Education Statistics, 1989-90, 1999-2000, and 2003-04 National Postsecondary Student Aid Studies (NPSAS:90, NPSAS:2000, and NPSAS:04). |  |  |  |

## Total and Net Access Price of Attending a Postsecondary Institution

Table 47-2. Average net access price for full-time, full-year dependent students after grants and loans, by type of institution and family income: 1989-90, 1999-2000, and 2003-04

| [In constant 2003-04 dollars] |  |  |  |
| :---: | :---: | :---: | :---: |
| Type of institution and family income | 1989-90 | 1999-2000 | 2003-04 |
| Public 2-year |  |  |  |
| Total | \$7,100 | \$7,700 | \$7,700 |
| Low income | 5,900 | 6,100 | 6,000 |
| Lower middle income | 7,500 | 7,900 | 7,800 |
| Upper middle income | 7,700 | 8,600 | 8,700 |
| High income | 7,300 | 8,900 | 8,800 |
| Public 4-year |  |  |  |
| Total | 8,700 | 8,800 | 9,300 |
| Low income | 6,200 | 5,700 | 6,000 |
| Lower middle income | 8,200 | 8,200 | 8,700 |
| Upper middle income | 9,300 | 9,400 | 10,000 |
| High income | 10,500 | 11,200 | 11,600 |
| Private not-for-profit 4-year |  |  |  |

## Note 1: Commonly Used Variables

Certain common variables, such as parents' education, race/ethnicity, community type, poverty, and geographic region are used by different surveys cited in The Condition of Education 2007. The definitions for these variables can vary across surveys and sometimes vary between different time periods of a single survey. This supplemental note describes how several common variables, used in various indicators in this volume, are defined in each of the surveys. In addition, this note describes certain terms used in several indicators.

## Parents' Education

Parents' level of education is generally measured by either the mother's highest level of education attained or the highest level of education attained by either parent. Indicators 2 and 29, based on the National Household Education Surveys Program (NHES), use the highest level of education attained by the child's mother and/ or father. For these indicators, both mother's and father's education were constructed using three items: (1) the highest grade completed, (2) whether he and/or she obtained a vocational or technical degree after high school, and (3) whether he and/or she obtained a high school equivalency degree if he or she had not completed high school. Indicators 11, 12, and 13 report parents' highest level of education based on a question in the National Assessment of Educational Progress (NAEP) that asked students in 8 th and 12th grades to indicate the highest level of education completed by each parent. Students could choose from "did not finish high school," "graduated from high school," "some education after high school," "graduated from college," and "I don't know." Indicator 16, based on the Early Childhood Longitudinal Survey, Kindergarten Class of 1998-99 (ECLS-K), spring 2004 data collection, is derived from parent interview information on the mother's educational attainment (and is imputed using hot-deck procedures if missing). Respondents reported the mother's highest level of education and these responses
were coded " 8 th grade or below," "9th-12th grade," "high school diploma/equivalent," "voc/tech program," "some college," "bachelors degree," "graduate/professional school, no degree," "masters degree (MS, MA)," and "doctorate or professional degree." For this volume, the responses were collapsed into a four-category variable: less than high school, high school diploma or equivalent, some college or vocational technical degree, and bachelor's degree or higher. The 260 children without mothers in the household in the 5th-grade year (1.5 percent of the sample) do not have values for this variable.

## Race/Ethnicity

Classifications indicating racial/ethnic heritage are based primarily on the respondent's selfidentification, as is the case with data collected by the U.S. Census Bureau, or in rare instances, on observer identification. These categories are in accordance with the Office of Management and Budget's standard classification scheme.

Ethnicity is based on the following categorization:

- Hispanic or Latino: A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race.

Race is based on the following categorization:

- American Indian or Alaska Native: A person having origins in any of the original peoples of North and South America (including Central America) who maintains tribal affiliation or community attachment.
- Asian: A person having origins in any of the original peoples of the Far East, Southeast Asia, the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippines, Thailand, and Vietnam.
- Black: A person having origins in any of the Black racial groups of Africa.
- Native Hawaiian or Other Pacific Islander: A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.
- White: A person having origins in any of the original peoples of Europe, North Africa, or the Middle East.
- More than one race: A person who selected two or more of the following racial categories when offered the option of selecting one or more racial designations: White, Black, Asian, Native Hawaiian, or American Indian.

Race categories presented in The Condition of Education 2007 exclude persons of Hispanic ethnicity; thus, the race/ethnicity categories are mutually exclusive. Not all categories are shown in all indicators. In some cases, categories are omitted because there are insufficient data in some of the smaller categories or because survey sampling plans did not distinguish between groups (between Asians and Pacific Islanders, for example). In other cases, omissions occur because only comparable data categories are shown. For example, the category "More than one race," which was introduced in the 2000 Census and became a regular category for data collection in the Current Population Survey (CPS) in 2003, is sometimes excluded from indicators that present a historical series of data with constant categories, and it is sometimes included within the category "Other."

The introduction of the category "More than one race" follows a change in the Office of Management and Budget's standard classification scheme for race/ethnicity. This change has required changes to the questions asked by the CPS, and it will require further changes to the questions asked of future federal survey participants. As a result of the new classification scheme, distributions by race/ethnicity for 2003

CPS data and for later years may differ somewhat from those in earlier years. In the Census population estimates for July 1, 2005, about 1.5 percent of the national population were classified as "More than one race." (For further details, see http://www.census.gov/popest/ national/asrh/NC-EST2005-srh.html.)

In The Condition of Education 2007, the above definitions of race/ethnicity apply to indicators $4,5,6,7,9,11,12,13,14,16,18,19,20,22$, $23,24,25,26,27$, and 36 .

Over time, the National Household Education Survey (NHES) has had different response options for race/ethnicity. In 1991 and 1995, the response options were limited to White, Black, Hispanic, Asian/Pacific Islander, American Indian/Alaska Native, and Other. In 1999 and 2001, the response options included White, Black, Hispanic, Asian/Pacific Islander, American Indian/Alaska Native, Other, and More than one race. In addition to these categories, in 2005, Asian and Pacific Islander were separated into two race options. Indicators 2, 10, and 29 present data by race/ethnicity using the NHES.

The race/ethnicity variable for the Schools and Staffing Survey (SASS) is constructed using two questions: "Are you of Hispanic or Latino origin?" and "What is your race?" with possible responses of White, Black or African-American, Asian, Native Hawaiian or Other Pacific Islander, and American Indian or Alaska Native. Prior to 2003-04, SASS did not distinguish between Asian and Pacific Islander. For the first time, in 2003-04, respondents were able to select multiple race categories. In The Condition of Education 2007, these definitions of race/ethnicity apply to indicators 33 and 34.

## Community Type

There are various classification systems that federal departments and agencies use to define community types. Indicators in The Condition of Education rely on one or a combination of

# Note 1: Commonly Used Variables 

Continued
the following three classification systems: the Office of Management and Budget's system of metropolitan areas, which is used by the Census Bureau; the Census Bureau's system of urbanized/urban/rural areas; and the National Center for Education Statistics' system of locale codes. All three of these classification systems were revised in 2000 and were fully in effect by 2003 .

## Metropolitan Areas

The Census Bureau's Current Population Survey (CPS) classifies community type based on the concept of a metropolitan area, which has changed in its application over time. Between 1990 and 2000, the Census and the CPS used the term "metropolitan area" (MA) to refer collectively to Metropolitan Statistical Areas (MSAs), Primary Metropolitan Statistical Areas (PMSAs), and Consolidated Metropolitan Statistical Areas (CMSAs) (defined below). In 2000, the Census adopted the term "Core Based Statistical Area" (CBSA), which refers collectively to metropolitan statistical areas and (the newly introduced concept of) micropolitan statistical areas.

## Metropolitan Areas-1990 Standards

The Office of Management and Budget (OMB) defines and designates metropolitan areas, following standards established by the interagency Federal Executive Committee on Metropolitan Areas, with the aim of producing definitions that are as consistent as possible for all MAs nationwide. Under its 1990 standards, the OMB defined an MA as "a large population nucleus together with adjacent communities that have a high degree of economic and social integration with that core." The Census Bureau used this definition for an MA from 1990 to 2000. (See http://www.census.gov/prod/cen1990/ $\mathrm{cph}-\mathrm{s} / \mathrm{cph}-\mathrm{s}-1-1 . \mathrm{pdf}$ for more details.)

In order to be designated as an MA under the 1990 standards, an area had to meet one or both of the following criteria: (1) include a
city with a population of at least 50,000 or (2) include a Census Bureau-defined urbanized area of at least 50,000 and have a total MA population of at least 100,000 (75,000 in New England). Under the 1990 standards, the "central county" (or counties) contained either the central city (defined below) or at least 50 percent of the population of the central city, or had at least 50 percent of its population in an urbanized area. Additional "outlying counties" were included in the MA if they met specified requirements of commuting to the central counties and selected requirements of metropolitan character (such as population density and percent urban). In New England, MAs were defined in terms of cities and towns, following rules analogous to those used with counties elsewhere.

The individual counties (or other geographic entities) comprising each MA were either designated as a Metropolitan Statistical Area (MSA) or, if the MA was large enough ( 1 million in population or more), as a Consolidated Metropolitan Statistical Area (CMSA) composed of two or more Primary Metropolitan Statistical Areas (PMSAs). For example, the PMSA "Milwaukee-Waukesha, WI" combined with the PMSA "Racine, WI" to form the CMSA of "Milwaukee-Racine, WI." CMSAs could span states, as was the case with the CMSA "Philadelphia-Wilmington-Atlantic City, PA-NJ-DE-MD." (In June 1999, there were 258 MSAs and 18 CMSAs in the United States, which included a total of 73 PMSAs.)

All territory, population, and housing units inside of MAs were characterized as metropolitan. Any territory, population, or housing units located outside of an MA were defined as nonmetropolitan. The largest city in each MA was designated a central city, and additional cities could qualify as such if specified requirements were met concerning population size and commuting patterns. (In June 1999, there were 542 central cities in the United States plus 12 in Puerto Rico.)

Together these classifications were used to define a location's MA Status as

1. Central city,
2. Balance of an MA (meaning any territory that is metropolitan but not in a central city), or
3. Nonmetropolitan.

This classification scheme for community type is used by the School Crime Supplement (SCS) to the National Crime Victimization Survey (NCVS) (U.S. Department of Justice, Bureau of Justice Statistics); however, the community type labels differ. NCVS uses the following labels to identify the community type of its respondents' home residence:

- Urban: a central city of an MA.
- Suburban: balance of an MA (outside of a central city but in the MA).
- Rural: nonmetropolitan area.

In The Condition of Education 2007, these labels and definitions apply to indicator 36 .

## Metropolitan and Micropolitan Statistical Areas -2000 Standards

In 2000, the OMB defined metropolitan and micropolitan statistical areas as "a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core." Together metropolitan and micropolitan statistical areas are considered to constitute the "Core Based Statistical Area" (CBSA). Currently defined metropolitan and micropolitan statistical areas are based on the application of OMB's 2000 standards to 2000 decennial census data. (Current metropolitan and micropolitan statistical area definitions were announced by OMB effective June 6, 2003.)

In order to be designated as a CBSA under the 2000 standards, an area must contain at least
one "urban" area (that is, an urbanized area or urban cluster-see definitions of urbanized area and urban cluster below) with a population of 10,000 or more. Each metropolitan statistical area-now referred to as a "metro area" to distinguish it from the metropolitan statistical areas referred to as "MSAs" under the 1990 standards-must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population. Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contains at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a "central county" (counties). Additional "outlying counties" are included in the CBSA if they meet specified requirements of commuting to or from the central counties. Counties or equivalent entities form the geographic "building blocks" for metropolitan and micropolitan statistical areas throughout the United States and Puerto Rico. (As of June 6, 2000, there were 362 metropolitan statistical areas and 560 micropolitan statistical areas in the United States. In addition, there were eight metro areas and five micropolitan statistical areas in Puerto Rico.) (See http://www.census. gov/population/www/estimates/aboutmetro. html for more details.)

Together these classifications are used to define a location's CBSA status (or, if no micropoli$\tan$ statistical areas are included, metro area status) as

1. Principal city of a CBSA (or metro area).
2. Located in a CBSA (or metro area), but not in the principal city.
3. Not located in a CBSA (or metro area).

As with the previous MA status classifications under the 1990 standards, the CBSA status classifications under the 2000 standards do

# Note 1: Commonly Used Variables 

Continued
not equate to an urban-rural classification; all counties included in metropolitan and micropolitan statistical areas (and many other counties) contain both.

In The Condition of Education 2007, no indicators use these labels and definitions. However, some indicators use the NCES 2002-revised locale codes that are based on the metro area labels and definitions.

## Urbanized, Urban, and Rural Areas

The Census Bureau divides the entire geographic area of the United States, Puerto Rico, and the Island Areas according to a concept of urban and rural areas. As with metropolitan statistical areas, the Census Bureau revised the urban/rural concept and criteria for the 2000 Census. The criteria in place between 1990 and 2000, however, were used to create NCES locale codes (described below). Thus, this supplemental note explains the 1990-2000 criteria in detail for readers to understand fully the locale code definitions.

From the adoption of the urban/rural concept for the 1950 Census until the 2000 Census, an urbanized area consisted of one or more "central places" and the adjacent densely settled surrounding "urban fringe" that together had a minimum population of 50,000 people. A "place" was either an incorporated governmental unit, such as a city, village, borough, or town, or a Census Designated Place (CDP), which was an unincorporated population cluster for which the Census Bureau delineates boundaries in cooperation with state and local agencies. All of the territory within the urbanized area that was outside the central place or places comprised the "urban fringe." Territory included in the urban fringe generally had a population density of at least 1,000 people per square mile but could include lower density territory that contained nonresidential urban land uses (e.g., areas zoned for commercial or industrial use or reserved for recreational purposes) or served to link outlying densely settled
territory with the main body of the urbanized area. The Census Bureau defined as urban any incorporated places (cities, towns, villages, etc.) or CDPs outside urbanized areas that contained a population of 2,500 or more.

The Census Bureau also expanded the definition of places to include extended cities. Extended cities were incorporated places whose boundaries encompassed substantial amounts of low-density territory (less than 100 people per square mile), relative to the overall land area of the place. The Census Bureau then identified both urban and rural territory in such places, thus providing exceptions to the general rule that places were classified as entirely urban or entirely rural. There were 182 extended cities in 1990. The decision to ignore place boundaries when defining urban areas for the 2000 Census (see below) made the extended city concept obsolete; under the 2000 criteria, any place potentially can be divided into urban and rural components. No survey employed in this volume of The Condition of Education includes extended cities in its community type definition.

The Census Bureau then classified all territory, population, and housing units not classified as urbanized or urban as rural. (For further details, see http://www.census.gov/population/ censusdata/urdef.txt.)

Beginning with the 2000 Census, the Census Bureau has employed new definitions of urban areas based on the concepts of an urbanized area and an urban cluster, the former being similar to the urbanized area under the 1990 definitions and the latter replacing the concept of urban fringe and urban areas. Urbanized areas and urban clusters consist of densely settled census block groups and census blocks that meet specified minimum population density requirements. Urbanized areas continue to have minimum populations of 50,000 ; urban clusters have populations of at least 2,500 and less than 50,000 . Place boundaries are no longer taken into consideration when defining

# Note 1: Commonly Used Variables 

Continued
these two types of urban areas. (Under the previous classification system, place boundaries were used to determine the urban/rural classifications of territory: all incorporated places that had at least 2,500 people were classified as urban if they were outside an urbanized area.) Thus, the Census Bureau's current urban area classification provides a seamless, nationally consistent method of defining urban areas that is not affected by varying state laws governing incorporation and annexation. For further details on the revised definitions, see http://www.census.gov/geo/ www/ua/ua 2k.pdf. (For differences between the 1990 Census and 2000 Census Urbanized Area Criteria, see http://www.census.gov/geo/ www/ua/uac2k 90.html.)

In The Condition of Education 2007, indicator 29 uses these definitions with the labels urban (as an abbreviation for urbanized areas and urban clusters) and rural.

## Locale Code

In the NCES Common Core of Data (CCD), the community type of schools is classified according to a "Locale Code" that is defined according to a mix of OMB (metropolitan area) and Census Bureau (urban/rural) classifications. There are eight categories within the school locale code classification: (1) large city; (2) midsize city; (3) urban fringe of a large city; (4) urban fringe of a midsize city; (5) large town; (6) small town; (7) nonmetropolitan rural; and (8) metropolitan rural. These categories roughly equate to a central city/suburb/large town/small town/rural scheme, identifying the general character of each school's location. "Large city" and "midsize city" schools are located in principal cities (formerly referred to as "central cities") of metropolitan statistical areas, and a threshold of 250,000 people is used to distinguish between a large city and a midsize city. The two "urban fringe" categories identify suburban schools within metropolitan statistical areas. The "large town" and "small
town" categories identify schools in smaller urban centers ( 25,000 up to 50,000 people) and small towns ( 2,500 up to 25,000 people) that are located outside metropolitan areas; many of these communities represent the urban centers/small towns that serve a largely rural countryside. The two rural categories recognize that rural territory exists in both metropolitan areas and nonmetropolitan territory. Indicator 40 modifies this classification such that city includes categories 1 and 2 ; suburban includes categories 3 and 4 ; town includes categories 5 and 6 ; and rural includes categories 7 and 8 .

Each school is assigned to one of these categories based on the inside/outside principal city, urban/rural, and metropolitan/nonmetropolitan status of the census block in which the school is located. Schools are assigned to specific census blocks through a process called "geocoding" in which the address of the school is mapped in relation to census geography. The associated census geographic information is then used to assign the school to a specific locale code category based on a mix of characteristics. For instance, a school located in a Census Bureau-defined urbanized area (that is, inside an OMB-defined metropolitan statistical area and outside of a principal city) would be classified as an "urban fringe" school; the specific urban fringe category is determined by the population size of the largest principal city in the metropolitan statistical area in which the school is located. Likewise, a school located outside a Census Bureau-defined "urban" area (urbanized or urban area; or urbanized area or urban cluster, depending upon the relevant standards-1990 or 2000) is classified as rural; then it is further distinguished by whether it is inside or outside the boundaries of a metropolitan statistical area.

In the context of assigning school locale codes, it is important to note that a school located in a Census Bureau-defined urban area that is inside the boundaries of a metropolitan statistical area will be classified as "urban fringe" regardless

## Note 1: Commonly Used Variables

## Continued

| Category | Under 1990 Standards (definitions in use from 1990-91 to 2002-03) | Under 2000 Standards (definitions in use since 2002-03) |
| :---: | :---: | :---: |
| Large city | Central city of a MA, with the city having a population of 250,000 or more. | Principal city of a metro area, with the city having a population of 250,000 or more. |
| Midsize city | A central city of a MA, with the city having a population less than 250,000. | Central city of a metro area, with the city having a population less than 250,000. |
| Urban fringe of a large city | Any incorporated place, Censusdesignated place, or nonplace territory within a MA with a large city and defined as urbanized or urban by the Census Bureau. | Any incorporated place, Censusdesignated place, or nonplace territory within a metro area with a large city and defined as urbanized or urban cluster by the Census Bureau. |
| Urban fringe of a midsize city | Any incorporated place, Censusdesignated place, or nonplace territory within a MA with a midsize city and defined as urbanized or urban by the Census Bureau. | Any incorporated place, Censusdesignated place, or nonplace territory within a metro area with a midsize city and defined as urbanized or urban cluster by the Census Bureau. |
| Large town | An incorporated place or Censusdesignated place with a population greater than or equal to 25,000 and located outside a MA. | Any incorporated place or Census-designated place with a population greater than or equal to 25,000 and located outside of a metro area. |
| Small town | An incorporated place or Censusdesignated place with population less than 25,000 and greater than or equal to 2,500 and located outside a MA. | Any incorporated place or <br> Census-designated place with a population less than 25,000 and greater than or equal to 2,500 and located outside of a metro area. |
| Rural (Rural, outside MA or metro area) | Any incorporated place, Censusdesignated place, or nonplace territory defined as rural by the Census Bureau and not within a MA with a large or midsize city. | Any incorporated place, Censusdesignated place, or nonplace territory defined as rural by the Census Bureau and not within a metro area with a large or midsize city. |
| Rural Urban Fringe (Rural, inside MA or metro area) <br> (This category was not used before 1998.) | Any incorporated place, Censusdesignated place, or nonplace territory defined as rural by the Census Bureau and within a MA with a large or midsize city. | Any incorporated place, Censusdesignated place, or nonplace territory defined as rural by the Census Bureau and within a metro area with a large or midsize city. |

## Note 1: Commonly Used Variables

of the distance from the large or midsize city with which it is associated. Further, if a school does not provide NCES with an address that can be geocoded to a specific census block (such as a P.O. Box or rural route/box number types of addresses) and clerical research cannot determine the specific location of the school in terms of Census Bureau geography, the locale code assignment process assigns the school an "urban fringe" code if the school is located in a metropolitan statistical area.

School districts' locale codes are assigned through the use of these school locale codes, according to classification rules, such as the following: if 50 percent or more of students in the district attend schools that are located in a single locale code, that code is assigned to the district. If not, schools are placed into one of three groups: large or midsize city; urban fringe or rural, inside an MA (or metro area); and large town, small town, or rural, outside an MA (or metro area). The group with the largest number of students is determined, and then the locale code within the group having the largest number of students is assigned to the district. If the number of students between two or more groups is the same, then the least urban locale code is assigned. Districts with no schools or students are given a locale code of "N." (For more information on the Locale Code, download the "General" Documentation for the school year of interest from the Common Core of Data (CCD) Public Elementary/Secondary School Universe Survey Data webpage at http://nces.ed.gov/ccd/pubschuniv.asp, and then search the document for occurrences of "Locale Code.")

Besides being used for the CCD, the eight-level locale codes are used to categorize community type in other NCES surveys. Typically, however, the locale codes are collapsed into three categories. For example, in the Schools and Staffing Survey (SASS), the community type of a school is categorized according to its address as follows:

- Central city: in a large or midsize central (or principal) city.
- Urban fringellarge town: in the urban fringe of a large or midsize city; a large town; or a rural area, inside of an MA (or metro area).
- Small town/rural: in a small town or rural area, outside of an MA (or metro area).

In The Condition of Education 2007, these labels under the 1990 standards for pre-2002-03 data and under the 2000 standards for 2002-03 (and subsequent) data apply to indicators 4 and 32 .

The locale codes can also be collapsed into four categories, depending on the survey used. The school locale variable for the Fast Response Survey System (FRSS) was based on the eight-category locale variable from CCD, recoded into a four-category analysis variable as follows:

- City: A large or midsize central city of a Consolidated Metropolitan Statistical Area (CMSA) or Metropolitan Statistical Area (MSA)
- Urban fringe: Any incorporated place, Census-designated place, or nonplace territory within a CSMA or MSA of a large or midsize city, and defined as urban by the Census Bureau.
- Town: Any incorporated place or Censusdesignated place with a population greater than or equal to 2,500 and located outside a CMSA or MSA.
- Rural: Any incorporated place, Censusdesignated place, or nonplace territory defined as rural by the Census Bureau.

In The Condition of Education 2007, these labels apply to the Special Analysis.

The locale code for indicators using data from the National Assessment of Educational Prog-

## Note 1: Commonly Used Variables

## Continued

ress (NAEP) is also collapsed into a four-level variable, as follows:

- Central large city: in a large central (or principal) city.
- Central midsize city: in a midsize central (or principal) city.
- Urban fringellarge town: in the urban fringe of a large or midsize city; a large town; or a rural area, inside of an MA (or metro area).
- Small town/rural: in a small town or rural area, outside of an MA (or metro area).

In The Condition of Education 2007, these labels apply to indicators 11 and 12.

## Poverty

Data on household income and the number of people living in the household are combined with estimates of the poverty threshold published by the Census Bureau to determine the poverty status of children (or adults). The thresholds used to determine poverty status for an individual differ for each survey year. The weighted average poverty thresholds for various household sizes for 1990, 1995, and 2000 through 2005 are shown in the table on the next page. (For thresholds for other years, see http://www.census.gov/hhes/www/poverty/ threshld.html.)

In indicator 2, children in families whose incomes are below the poverty threshold are classified as poor; those in families with incomes at or above the poverty threshold are classified as nonpoor. Indicators 6, 19, and 29 modify the categories of poverty to poor, near-poor, and nonpoor. Poor is defined to include those families whose incomes are below the poverty threshold, near-poor is defined as those in families with incomes at 100-199 percent of the poverty threshold, and nonpoor is defined as those in families with incomes at 200 percent or more of the poverty threshold.

Indicator 16 modifies the categories of poverty to examine poverty across rounds of the Early Childhood Longitudinal Survey, Kindergarten Class of 1998-99 (ECLS-K). This composite variable classified children into three categories: (1) below the poverty threshold, all rounds; (2) at or above the poverty threshold, all rounds; and (3) in and out of poverty across rounds. The composite was derived from poverty status variables for kindergarten, 1st grade, 3rd grade, and 5th grade. The poverty status variables were created using the federal poverty thresholds (described above) and were derived from household income and the number of household members.

Eligibility for the National School Lunch Program also serves as a measure of poverty status. The National School Lunch Program is a federally assisted meal program operated in public and private nonprofit schools and residential child care centers. Unlike the poverty thresholds discussed above, which rely on dollar amounts determined by the Census Bureau, eligibility for the National School Lunch Program relies on the federal income poverty guidelines of the Department of Health and Human Services. To be eligible for free lunch, a student must be from a household with an income at or below 130 percent of the federal poverty guideline; to be eligible for reduced-price lunch, a student must be from a household with an income at or below 185 percent of the federal poverty guideline. Title I basic program funding relies on free lunch eligibility numbers as one (of four) possible poverty measures for levels of Title I federal funding. In The Condition of Education 2007, eligibility for the National School Lunch Program applies to indicators $11,12,13$, and 32.

## Small Area Income and Poverty Estimates (SAIPE) Program

The goal of the Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program is to make intercensal estimates of median income

## Note 1: Commonly Used Variables

Weighted average poverty thresholds, by household size: Selected years, 1990-2005

| Household size | Poverty threshold | Household size | Poverty threshold |

## Note 1: Commonly Used Variables

## Continued

and numbers in poverty for states, counties, and school districts. Indicator 40 employs SAIPE's school district estimates of the population of children ages 5-17 and the number of related children ages 5-17 in families in poverty. Indicator 40 employs the SAIPE data, rather than the free-lunch-eligible data, to measure poverty by school district because SAIPE data are available for all regular operating school districts, while free-lunch-eligible data are missing for a sizable number of school districts. Further, the SAIPE poverty data are constructed using consistent methodology, while the designation
of who is free lunch eligible may differ from school to school. More information about SAIPE is available at http:// www.census.gov/ hhes/www/saipe/.

## Geographic Region

The regional classification systems below represent the four geographical regions of the United States as defined by the Census Bureau of the U.S. Department of Commerce. In The Condition of Education 2007, indicators 3, 4, $5,6,37$, and 38 use this system.

## U.S. Census Bureau, Regional Classification

| Northeast | South | Midwest | West |
| :--- | :--- | :--- | :--- |
| Connecticut | Alabama | Illinois | Alaska |
| Maine | Arkansas | Indiana | Arizona |
| Massachusetts | Delaware | lowa | California |

## Note 2: The Current Population Survey (CPS)

The Current Population Survey (CPS) is a monthly survey of a nationally representative sample of all U.S. households. The survey's scientifically selected sample consists of approximately 50,000 households from the 50 states and the District of Columbia. The population surveyed is referred to as the civilian, noninstitutional population. Members of the armed forces, inmates in correctional institutions, and patients in long-term medical or custodial facilities are not included in the sample. The CPS has been conducted for more than 50 years. The U.S. Department of Commerce, Census Bureau, conducts the survey for the Bureau of Labor Statistics, asking a knowledgeable adult household member (known as the "household respondent") to answer all the questions on all of the month's questionnaires for all members of the household.

The CPS collects data on the social and economic characteristics of the civilian, noninstitutional population, including information on income, education, and participation in the labor force. However, the CPS does not collect all this information every month. Each month a "basic" CPS questionnaire is used to collect data about participation in the labor force of each household member, age 15 or older, in every sampled household. In addition, different supplemental questionnaires are administered each month to collect information on other topics.

In March and October of each year, the supplementary questionnaires contain some questions of relevance to education policy. The Annual Social and Economic Supplement, or March CPS Supplement, is a primary source of detailed information on income and work experience in the United States. The labor force and work experience data from this survey are used to profile the U.S. labor market and to make employment projections. Data from this survey are also used to generate the annual Population Profile of the United States, reports on geographical mobility, educational attainment, and detailed analyses of wage rates, earnings, and poverty status. The October Supplement contains basic annual
school enrollment data for preschool, elementary and secondary, and postsecondary students, as well as educational background information needed to produce dropout estimates on an annual basis. In addition to the basic questions about education, interviewers also ask questions about school enrollment for all household members age 3 or older.

CPS interviewers initially used printed questionnaires. However, since 1994, the Census Bureau has used Computer-Assisted Personal and Telephone Interviewing (CAPI and CATI) to collect data. Both technologies allow interviewers to use a complex questionnaire and increase consistency by reducing interviewer error. Further information on the CPS can be found at http://www.census.gov/cps.

## Definition of Selected Variables

## Employment Status

Indicators 19 and 20 use data from the March CPS and its supplement, which include questions on employment of adults in the previous week, to determine employment status. Respondents could report that they were employed (either full or part time), unemployed (looking for work or on layoff), or not in the labor force (due to being retired, having unpaid employment, or some other reason).

Indicator 45 uses data from the October CPS and its supplement, which also includes questions on employment of adults in the previous week to determine employment status. Employed persons include those 16 years and over who, during the reference week, (1) did any work at all (at least 1 hour) as paid employees, or (2) were not working but who had jobs or businesses from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs.

# Note 2: The Current Population Survey (CPS) 

## Continued

## Hours Worked per Week

Indicator 45 presents data on the number of hours worked per week. This estimate is the number of hours a respondent worked in all jobs in the week previous to the time of survey. The population for this variable includes any employed person who also worked in the week previous to the time of survey. The sum of the categories may not equal the total percentage employed because those who were employed, but did not work in the previous week, were excluded.

## Family Income

Indicator 25 uses data on family income that are collected as part of the October CPS to measure a student's economic standing. The October CPS determines family income from a single question asked of the household respondent. Family income includes all monetary income from all sources (including jobs, business, interest, rent, and social security payments) over a 12 -month period. The income of nonrelatives living in the household is excluded, but the income of all family members age 15 or older (age 14 or older before 1989), including those temporarily living away, is included.

In indicator 25 , family income of a recent high school graduate is defined as the income of the household where the graduate has membership. A household is defined as all individuals whose usual place of residence at the time of the interview is the sample unit. The following considerations guide the determination of household members:

- Persons staying in the sample bousing unit at the time of the interview: Persons for whom the household is their usual place of residence are included in the household membership. Persons who are living in the household temporarily (such as students) and who have living quarters held elsewhere are not considered part of the household, unless they are living with their spouse or children.
- Persons who usually live in the sample housing unit and are absent at the time of the interview: Individuals who are temporarily absent and who have no other usual place of residence are classified as household members even if they are not present in the household during the survey week. If such persons are away temporarily attending school, they are considered part of the household unless they are living with their spouse or children.

Families in the bottom 20 percent of all family incomes are classified as low income; families in the top 20 percent of all family incomes are classified as high income; and families in the 60 percent between these two categories are classified as middle income. The table on the next page shows the current dollar amount of the breakpoints between low and middle income and between middle and high income used in indicator 25 . For example, low income for families in 2005 is defined as the range from $\$ 0$ to $\$ 16,800$; middle income is defined as the range from $\$ 16,800$ to $\$ 80,700$; and high income is defined as $\$ 80,700$ or more.

## Median Earnings

Indicator 20 uses data on earnings that are collected as part of the March CPS. The March CPS collects information on earnings from individuals who were full-year workers (individuals who were employed 50 or more weeks in the previous year) and full-time workers (which refers to those who were usually employed 35 or more hours per week). Earnings include all wage and salary income. Unlike mean earnings, median earnings does not change or changes very little in response to extreme observations.

## Race/Ethnicity

Over time, the CPS has had different response options for race/ethnicity. From 1972 through 1988, the response options were limited to White, Black, Hispanic, and Other. From 1989 through 1995, the response options included

## Note 2: The Current Population Survey (CPS)

Dollar value (in current dollars) at the breakpoint between low- and middle-income and between middle- and highincome categories of family income: October 1972-2005

| Year | Breakpoints between low- and middle-income | Breakpoints between middle- and high-income |
| :---: | :---: | :---: |
| 1972 | \$3,600 | \$13,600 |
| 1973 | 3,900 | 14,800 |
| 1974 | - | - |
| 1975 | 4,400 | 17,000 |
| 1976 | 4,600 | 18,300 |
| 1977 | 4,900 | 20,000 |
| 1978 | 5,300 | 21,600 |
| 1979 | 5,800 | 23,700 |
| 1980 | 6,100 | 25,300 |
| 1981 | 6,500 | 27,100 |
| 1982 | 7,200 | 31,200 |
| 1983 | 7,300 | 32,300 |
| 1984 | 7,500 | 34,200 |
| 1985 | 7,900 | 36,400 |
| 1986 | 8,400 | 38,100 |
| 1987 | 8,800 | 39,600 |
| 1988 | 9,300 | 42,100 |
| 1989 | 9,500 | 43,900 |
| 1990 | 9,600 | 46,200 |
| 1991 | 10,500 | 48,300 |
| 1992 | 10,700 | 49,600 |
| 1993 | 10,800 | 50,600 |

# Note 2: The Current Population Survey (CPS) 

Continued

White, Black, American Indian/Aleut Eskimo, Asian/Pacific Islander, Hispanic, and Other. From 1996 through 2002, the response options included White, Black, American Indian/Aleut Eskimo, Asian/Pacific Islander, and Hispanic. From 2003 through the present, the response options included White, Black, American Indian/Alaskan Native, Asian, Hawaiian/Pacific Islander, and Hispanic and allowed respondents to select more than one race category. Race categories presented in The Condition of Education 2007 exclude persons of Hispanic ethnicity; thus, the race/ethnicity categories are mutually exclusive. Indicators 5, 19, 20, 23, 25, 27, and 45 present data by race/ethnicity using CPS data. See supplemental note 1 for more information on race/ethnicity.

## Enrolled in School

In indicator 20, which presents the racial/ethnic distribution of public school students, the data for 1979 and 1980 are missing because the data for the variable "attending school" were judged unacceptable due to an error in the design of the questionnaire; therefore, the records are all blank.

## Status Dropout Rate

Indicator 23 reports status dropout rates by race/ethnicity. The status dropout rate is one of a number of rates reporting on high school dropout and completion behavior in the United States. Status dropout rates measure the percentage of individuals within a given age range who are not enrolled in high school and who lack a high school credential, irrespective of when they dropped out. Because they measure the extent of the dropout problem for the sampled population, status dropout rates can be used to estimate the need for further education and training for dropouts in that population. Status dropout rates should not be confused with event dropout rates, which measure the proportion of students who drop out of high school in a given year, and which have been reported in a previous volume of The Condition of Education
(NCES 2004-077, indicator 16; see also NCES 2005-046).

Indicator 23 uses the October CPS data to estimate the status dropout rate, or the percentage of civilian, noninstitutionalized young people ages 16 through 24 who are out of high school and who have not earned a high school credential (either a diploma or equivalency credential such as a General Educational Development certificate [GED]). Status dropout rates count as dropouts individuals who never attended school and immigrants who did not complete the equivalent of a high school education in their home country. The inclusion of these individuals is appropriate because the status dropout rate is designed to report the percentage of youth and young adults in the United States who lack what is now considered a basic level of education. However, the status dropout rate should not be used as an indicator of the performance of U.S. schools, because it counts as dropouts individuals who may have never attended a U.S. school.

The numerator of the status dropout rate for a given year is the number of individuals ages 16 through 24 who, as of October of that year, had not completed high school and were not currently enrolled in school. The denominator is the total number of individuals ages 16 through 24 in the United States in October of that year.

The CPS October Supplement items used to identify status dropouts include (1) "Is ... attending or enrolled in regular school?" and (2) "What is the highest level of school ... completed or the highest degree ... received?" See the Educational Attainment section, below, for details on how the second question changed from 1972 to 1992. Beginning in 1986, the Census Bureau instituted new editing procedures for cases with missing data on school enrollment, i.e., missing data relating to the first October supplement item, above. This was done in an effort to improve data quality. The effect of the editing changes was evaluated by applying both the old

# Note 2: The Current Population Survey (CPS) 

and new editing procedures to the data from 1986. The effect of the changes was an increase in the number of students enrolled in school and a slightly lowered status dropout rate (12.2 percent based on the old procedures, and 12.1 percent based on the new ones). The difference in the two rates was not statistically significant. While the change in the procedures occurred in 1986, the new procedures are reflected in indicator 23 beginning in 1987.

## Youth Neither Enrolled nor Working

The March CPS Supplement added questions to collect information on the educational enrollment of all respondents, as well as their employment status in 1986. To construct the variable for indicator 19, all youth ages 16-19 were categorized as being in one of four categories: enrolled in an education institution but not working; working but not enrolled; both enrolled and working; or neither enrolled nor working. Respondents who were unemployed and looking for work as well as those who were unemployed and not in the labor force (i.e., not looking for work) were both considered not working.

## Educational Attainment

Data from CPS questions on educational attainment are used in indicators 19, 20, 25, and 27. From 1972 to 1991, two CPS questions provided data on the number of years of school completed: (1) "What is the highest grade ... ever attended?" and (2) "Did ... complete it?" An individual's educational attainment was considered to be his or her last fully completed year of school. Individuals who completed 12 years were deemed to be high school graduates, as were those who began but did not complete the first year of college. Respondents who completed 16 or more years were counted as college graduates.

Beginning in 1992, the CPS combined the two questions into the following question: "What is the highest level of school ... completed or the highest degree ... received?" This change
means that some data collected before 1992 are not strictly comparable with data collected from 1992 onward and that care must be taken when making such comparisons. The new question revision changed the response categories from highest grade completed to highest level of schooling or degree completed. In the revised response categories, several of the lower grade levels are combined into a single summary category such as " 1 st, 2 nd , 3 rd, or 4th grades." Several new categories are used, including "12th grade, no diploma"; "High school graduate, high school diploma, or the equivalent"; and "Some college but no degree." College degrees are now listed by type, allowing for a more accurate description of educational attainment. The new question emphasizes credentials received rather than the last grade level attended or completed. The new categories include the following:

- High school graduate, high school diploma , or the equivalent (e.g., GED)
- Some college but no degree
- Associate's degree in college, occupational/ vocational program
- Associate's degree in college, academic program
- Bachelor's degree (e.g., B.A., A.B., B.S.)
- Master's degree (e.g., M.A., M.S., M.Eng., M.Ed., M.S.W., M.B.A.)
- Professional school degree (e.g., M.D., D.D.S., D.V.M., LL.B., J.D.)
- Doctorate degree (e.g., Ph.D., Ed.D.)

## High School Completion

The pre-1992 questions about educational attainment did not specifically consider high school equivalency certificates (GEDs). Consequently, an individual who attended 10th grade, dropped out without completing that grade, and who subsequently received a high

# Note 2: The Current Population Survey (CPS) 

Continued
school equivalency credential would not have been counted as completing 12th grade. The new question counts these individuals as if they are high school completers. Since 1988, an additional question has also asked respondents if they have a high school degree or the equivalent, such as a GED. People who respond "yes" are classified as high school completers. Before 1988, the number of individuals who earned a high school equivalency certificate was small relative to the number of high school graduates, so that the subsequent increase caused by including equivalency certificate recipients in the total number of people counted as "high school completers" was small in the years immediately after the change was made.

Before 1992, the CPS considered individuals who completed 12th grade to be high school graduates. The revised question added the response category " 12 th grade, no diploma." Individuals who select this response are not counted as graduates. Historically, the number of individuals in this category has been small.

## College Completion

Some students require more than 4 years to earn an undergraduate degree, so some researchers are concerned that the completion rate, based on the pre-1992 category "4th year or higher of college completed," overstates the number of respondents with a bachelor's degree (or higher). In fact, however, the completion rates among those ages 25-29 in 1992 and 1993 were similar to the completion rates for those in 1990 and 1991, before the change in the question's wording. Thus, there appears to be good reason to conclude that the change has not affected the completion rates reported in The Condition of Education 2007.

## Some College

Based on the question used in 1992 and in subsequent surveys, an individual who attended college for less than a full academic year would respond "some college but no degree." Before 1992, the appropriate response would have
been "attended first year of college and did not complete it," thereby excluding those individuals from the calculation of the percentage of the population with 1-3 years of college. With the new question, such respondents are placed in the "some college but no degree" category. Thus, the percentage of individuals with some college might be larger than the percentage with 1-3 years of college because "some college" includes those who have not completed an entire year of college, whereas " $1-3$ years of college" does not include them. Therefore, it is not appropriate to make comparisons between the percentage of those with "some college but no degree" using the post-1991 question and the percentage of those who completed "1-3 years of college" using the two pre-1992 questions.

In The Condition of Education, the "some college" category for years preceding 1992 includes only the responses " $1-3$ years of college." After 1991, the "some college" category includes those who responded "some college but no degree," "Associate's degree in college, occupational/vocational program," and "Associate's degree in college, academic program." The effect of this change to the "some college" category is indicated by the fact that in 1992, 48.9 percent of 25 - to 29 -year-olds reported completing some college or more, compared with 45.3 percent in 1991 (see indicator 27, table 27-2). The 3.6 percent difference is statistically significant. Some of the increase between 1991 and 1992 may be the result of individuals who completed less than 1 year of postsecondary education responding differently to the "completed some college" category; that is, including themselves in the category in 1992, but not including themselves in the category in 1991.

Another potential difference in the "some college" category is how individuals who have completed a certificate or other type of award other than a degree respond to the new questions introduced in 1992 about their educa-

## Note 2: The Current Population Survey (CPS)

Continued
tional attainment. Some may answer "some college, no degree"; others may indicate only high school completion; and still others may equate their certificate with one of the types of associate's degrees. No information is available on the tendencies of individuals with a postsecondary credential other than a bachelor's or higher degree to respond to the new attainment question introduced in 1992.

## Parental Education

Parents' education is defined as either the highest educational attainment of the two parents who reside with the student or, if only one parent is in the residence, the highest educational attainment of that parent. When neither parent resides with the student, it is defined as the highest educational attainment of the householder. Indicator 25 presents data by parents' education.

## Note 3: Other Surveys

## American Community Survey (ACS)

The Census Bureau introduced the American Community Survey (ACS) in 1996. When fully implemented in 2005, it will provide a large monthly sample of demographic, socioeconomic, and housing data comparable in content to the Long Form of the Decennial Census. Aggregated over time, these data will serve as a replacement for the Long Form of the Decennial Census. The survey includes questions mandated by federal law, federal regulations, and court decisions.

Beginning in 2005, the survey has been mailed to approximately 250,000 addresses in the United States and Puerto Rico each month, or about 2.5 percent of the population annually. A larger proportion of addresses in small governmental units (e.g., American Indian reservations, small counties, and towns) will receive the survey. The monthly sample size is designed to approximate the ratio used in Census 2000, requiring more intensive distribution in these areas.

National-level data from ACS are available starting with the year 2000. Under the current timetable, annual results will be available for areas with populations of 65,000 or more beginning in the summer of 2006 , for areas with populations of 20,000 or more in the summer of 2008 , and for all areas-down to the census tract level-by the summer of 2010 . This schedule is based on the time it will take to collect data from a sample size large enough to produce accurate results for different size geographic units.

Indicator 6 uses data from the ACS for the years 2000-05. For further details on the survey, see http://www.census.gov/acs/www/.

## Common Core of Data (CCD)

The NCES Common Core of Data (CCD), the Department of Education's primary database on public elementary and secondary education
in the United States, is a comprehensive annual, national statistical database of information concerning all public elementary and secondary schools (approximately 94,000 ) and school districts (approximately 17,000). The CCD consists of five surveys that state education departments complete annually from their administrative records. The database includes a general description of schools and school districts; data on students and staff, including demographics; and fiscal data, including revenues and current expenditures.

Indicators 3, 4, 24, 30, 32, 37, 38, 39, and 40 use data from the CCD. Further information about the database is available at http://nces. ed.gov/ccd/.

## Early Childhood Longitudinal Study, Kindergarten class of 1998-99 (ECLS-K)

The Early Childhood Longitudinal Study, Kindergarten Class of 1998-99 (ECLS-K) is an ongoing study conducted by NCES. Launched in fall 1998, the study follows a nationally representative sample of children from kindergarten through 8 th grade. The purpose of the ECLS-K is twofold: to be both descriptive and analytic. First, the ECLS-K provides descriptive national data on children's status at entry into school; children's transition into school; and children's progression through 5th grade. Second, the ECLS-K provides a rich dataset that enables researchers to study how a wide range of family, school, community, and individual variables affect children's early success in school.

A nationally representative sample of 21,260 children who enrolled in 1,277 kindergarten programs participated in the initial survey during the 1998-99 school year. These children were selected from both public and private kindergartens that offered full- and half-day programs. The sample consists of children from different racial/ethnic and socioeconomic backgrounds and includes an oversample of Asian/

# Note 3: Other Surveys 

Continued

Pacific Islander children. All kindergarten children within the sampled schools were eligible for the sampling process, including language minority and special education students. The sample design for the ECLS-K is a dual-frame, multistage sample. First, 100 Primary Sampling Units (PSUs), which are counties or groups of counties, were selected. Schools within the PSUs were then selected. Public schools were selected from a public school frame, and private schools were selected from a private school frame that oversampled private kindergartens. In fall 1998, approximately 23 kindergartners were selected within each of the sampled schools.

Data on the kindergarten cohort were collected in the fall and spring of the kindergarten year from the children, their parents, and their teachers. In addition, information was collected from children's schools and school districts in the spring of the kindergarten year. During the 1999-2000 school year, when most of the cohort moved to the 1st grade, data were collected from a 30 percent subsample of the cohort in the fall and from the full sample in the spring. In kindergarten, over 90 percent of the fall assessments took place in October and November of 1998, and over 90 percent of the spring assessments took place in April and May of 1999. Spring 1st-grade data were obtained between March and July of 2000, and spring 3rd-grade data were obtained between March and July of 2002, with 80 percent of each of the spring 1st-grade and spring 3rd-grade assessments conducted between early April and late May. Spring 5th-grade data were collected from February through June of 2004, with over 75 percent of the child assessments completed by the end of April.

Trained evaluators assessed children in their schools and collected information from parents over the telephone. Teachers and school administrators were contacted in their schools and asked to complete questionnaires. The children and their families, teachers, and schools provided information on children's cognitive,
social, emotional, and physical development. Information was also collected on the children's home environment, home educational practices, school and classroom environments, curricula, and teacher qualifications.

The ECLS-K 5th-grade direct cognitive assessment battery was designed to assess children's academic achievement in the spring of 5th grade and to provide a means of measuring growth since kindergarten entry. Therefore, the cognitive assessments (the K-1 assessment and the 3rd- and 5th-grade assessments) were designed to have overlapping items, i.e., items that were included in at least two rounds of data collection.

In indicator 16 , which is a cross-sectional analysis of the ECLS-K study, findings are representative of students in school in spring 2004 who were in kindergarten in fall 1998, including students who may have been in kindergarten for the second time in fall 1998 and students who were not assessed in English at some point in the study.

Further information on the survey is available at http://nces.ed.gov/ecls/kindergarten.asp/.

## Education Longitudinal Study of 2002 (ELS:2002)

The Education Longitudinal Study of 2002 (ELS:2002) is the fourth major national longitudinal survey of high school students conducted by NCES. Three previous surveys are similar: the National Longitudinal Study of the High School Class of 1972 (NLS:72), the High School and Beyond Longitudinal Study of 1980 (HS\&B:80), and the National Education Longitudinal Study of 1988 (NELS:88). Like its predecessors, ELS:2002 is designed to provide information to researchers, policymakers, and the public about high school students' experiences and activities, as well as to track subsequent changes in these young people's lives when they leave high school, enroll in college, and subsequently enter the workforce

# Note 3: Other Surveys 

Continued
or when they enter the workforce immediately after high school.

ELS:2002 sampled and collected data from 10th-graders in spring 2002 (the base year), along with data from their English and mathematics teachers, their school's librarian and principal, and one parent for each student. The base-year data include 10th-graders' scores on cognitive tests in reading and mathematics. About 750 schools were selected (in both the public and private sectors). In these schools, about 15,000 students-along with about 13,000 of their parents, 7,000 of their teachers, 700 of their principals, and 700 of their librar-ians-completed base-year surveys.

The first follow-up collected data from cohort members 2 years later, when most of them were 12 th-graders in the spring of 2004 . The sample of 12 th-graders was also augmented with students who were not sophomores in 2002 (or not in the country) to provide a nationally representative sample of 12th-graders. Special questionnaires were administered to the sophomore cohort members who were no longer in school as a result of dropping out or graduating early. A mathematics test was administered to the 12th-graders, and their high school transcripts were collected from the schools.

ELS:2002 has collected information on students' experiences while in high school (including their coursetaking, achievement, extracurricular activities, social lives, employment, and risk-taking behaviors); students' aspirations, life goals, attitudes, and values; and the influence of family members, friends, teachers, and other people in their lives.

The second follow-up was administered in the spring of 2006 , when many of the 12 thgraders were enrolled in college and some had entered the workforce. Data were collected on the colleges that students applied to, the financial aid offers they received, the colleges they attended, and the financial aid they received while in college.

A third follow-up is tentatively scheduled for the spring of 2010, when many of the sample members who attend college will have graduated.

Following the same cohort of students over time allows data users to monitor changes in students' lives, including their progress through high school, participation in postsecondary education (entry, persistence, achievement, and attainment), early experiences in the labor market, family formation, and civic participation. In addition, by combining data about students' school programs, coursetaking experiences, and cognitive outcomes with information from teachers and principals, the ELS:2002 data support investigation of numerous educational policy issues.

Indicators 21 and 22 use data from ELS:2002. For further details on the survey, see http:// nces.ed.gov/surveys/els2002/ overview.asp.

## High School and Beyond (HS\&B)

The Education Longitudinal Studies program began over 30 years ago with the implementation of the National Longitudinal Study of 1972 (NLS-72). High School and Beyond (HS\&B), the second in the series of NCES longitudinal studies, was launched in 1980. HS\&B included one cohort of high school seniors comparable to the NLS-72 sample; however, the study also extended the age span and analytical range of NCES longitudinal studies by surveying a sample of high school sophomores. Base-year data collection took place in the spring term of the 1979-80 academic year with a two-stage probability sample. More than 1,000 schools served as the first-stage units, and 58,000 students within these schools were the secondstage units. Both cohorts of HS\&B participants were resurveyed in 1982, 1984, and 1986; the sophomore group also was surveyed in 1992. In addition, to better understand the school and home contexts of the sample members, data

# Note 3: Other Surveys 

Continued
were collected from teachers (a teacher comment form in the base year asked for teacher perceptions of HS\&B sample members), principals, and a subsample of parents. High school transcripts were collected for a subsample of sophomore cohort members. As in NLS-72, postsecondary transcripts were collected for both HS\&B cohorts; however, the sophomore cohort transcripts cover a much longer time span (to 1993).

With the study design expanded to include a sophomore cohort, HS\&B provided critical data on the relationships between early high school experiences and students' subsequent educational experiences in high school. For the first time, national data were available that showed students' academic growth over time and how family, community, school, and classroom factors were associated with student learning. Researchers were able to use data from the extensive battery of achievement tests within the longitudinal study to assess growth in knowledge and cognitive skills over time. Moreover, data were then available to analyze the school experiences of students who later dropped out of high school and, eventually, to investigate their later educational and occupational outcomes.

Indicators 21 and 22 use data from HS\&B-So:80. Further information about the survey is available at http://www.nces.ed.gov/surveys/hsb/.

## Integrated Postsecondary Education Data System (IPEDS)

The Integrated Postsecondary Education Data System (IPEDS) is the core program that NCES uses for collecting data on postsecondary education. (Before IPEDS, some of the same information was collected by the Higher Education General Information Survey [HEGIS].) Indicators 8, 9, 26, 28, and 44 use data from HEGIS. IPEDS is a single, comprehensive system that encompasses all identified institutions whose primary purpose is to provide postsecondary education.

IPEDS consists of institution-level data that can be used to describe trends in postsecondary education at the institution, state, and/or national levels. For example, researchers can use IPEDS to analyze information on (1) enrollments of undergraduates, first-time freshmen, and graduate and first-professional students by race/ethnicity and sex; (2) institutional revenue and expenditure patterns by source of income and type of expense; (3) salaries of full-time instructional faculty by academic rank and tenure status; (4) completions (awards) by type of program, level of award, race/ethnicity, and sex; (5) characteristics of postsecondary institutions, including tuition, room and board charges, calendar systems, and so on; (6) status of postsecondary vocational education programs; and (7) other issues of interest.

Participation in IPEDS was a requirement for the 6,600 institutions that participated in Title IV federal student financial aid programs such as Pell Grants or Stafford Loans during the 2005-06 academic year. Title IV institutions include traditional colleges and universities, 2-year institutions, and for-profit degree- and non-degree-granting institutions (such as schools of cosmetology), among others. Each of these three categories is further disaggregated by control (public, private not-for-profit, and private for-profit), resulting in nine institutional categories, or sectors. In addition, 83 administrative offices (central and system offices) listed in the IPEDS universe were expected to provide minimal data through a shortened version of the Institutional Characteristics component. Four of the U.S. service academies are included in the IPEDS universe as if they were Title IV institutions. Institutions that do not participate in Title IV programs may participate in the IPEDS data collection on a voluntary basis.

IPEDS data for 1999 were imputed using alternative procedures. See NCES 2007-017, Guide to Sources, for more information.

Indicators $8,9,26,28,42$, and 44 use data from the IPEDS. The institutional categories

# Note 3: Other Surveys 

Continued
used in the surveys are described in supplemental note 9. Further information about IPEDS is available at http://nces.ed.gov/ipeds/.

## National Assessment of Adult Literacy (NAAL)

The National Assessment of Adult Literacy (NAAL), conducted by NCES in 2003, and its earlier sister survey, the 1992 National Adult Literacy Survey (NALS), assess the literacy of adults age 16 or older living in households or prisons. Respondents were asked to demonstrate that they understood the meaning of information found in texts they were asked to read.

The assessment defines literacy as "using printed and written information to function in society, to achieve one's goals, and to develop one's knowledge and potential." Results are reported on three literacy scales:

- Prose literacy: the knowledge and skills needed to perform document tasks (i.e., to search, comprehend, and use information from continuous texts).
- Document literacy: the knowledge and skills needed to perform document tasks (i.e., to search, comprehend, and use information from noncontinuous texts in various formats).
- Quantitative literacy: the knowledge and skills required to perform quantitative tasks (i.e., to identify and perform computations, either alone or sequentially, using numbers embedded in printed materials).

Within each of these three literacy scales, respondents were grouped based upon their achievement level. Below Basic indicates no more than the most simple and concrete literacy skills; Basic indicates skills necessary to perform simple and everyday literacy activities; Intermediate indicates skills necessary to perform moderately challenging literacy activi-
ties; and Proficient indicates skills necessary to perform more complex and challenging literacy activities.

To compare results between 1992 and 2003, the 1992 results were rescaled using the criteria and methods established for the 2003 assessment.

Indicator 18 uses information from NAAL and NALS. Further information about NAAL can be found at http://nces.ed.gov/naal/.

## National Crime Victimization Survey (NCVS)

The National Crime Victimization Survey (NCVS) is the nation's primary source of information on criminal victimization. Initiated in 1972 and redesigned in 1992, the NCVS annually collects detailed information on the frequency and nature of the crimes of rape, sexual assault, robbery, aggravated and simple assault, theft, household burglary, and motor vehicle theft experienced by Americans and their households each year. The survey measures crimes reported to police as well as those not reported. The NCVS sample consists of about 53,000 households. U.S. Census Bureau personnel interview all household members age 12 or older within each sampled household to determine whether they had been victimized by the measured crimes during the 6 months preceding the interview. About 75,235 persons age 12 or older are interviewed each 6 months. Households remain in the sample for 3 years and are interviewed seven times at 6 -month intervals. The first of these seven household interviews is used only to bind future interviews by establishing a time frame in order to avoid duplication of crimes reported in the six subsequent interviews. After their seventh interview, households are replaced by new sample households. Data are obtained on the frequency, characteristics, and consequences of criminal victimization in the United States. The survey enables the Bureau of Justice Statistics (BJS) to estimate the likelihood of victimization for the

## Note 3: Other Surveys

Continued
population as a whole, as well as for segments of the population such as women, the elderly, members of various racial groups, city dwellers, or other groups. The NCVS provides the largest national forum for victims to describe the impact of crime and the characteristics of violent offenders.

Indicator 36 uses data from NCVS. Further information about the survey is available at http:// www.census.gov/rodet/www/ncvs.html.

## National Education Longitudinal Study of 1988 (NELS:88)

The National Education Longitudinal Study of 1988 (NELS:88) is the third major secondary school student longitudinal study sponsored by NCES. The two studies that preceded NELS:88, the National Longitudinal Study of the High School Class of 1972 (NLS-72) and the High School and Beyond Longitudinal Study of 1980 (HS\&B:80), surveyed high school seniors (and sophomores in HS\&B) through high school, postsecondary education, and work and family formation experiences. Unlike its predecessors, NELS:88 begins with a cohort of 8th-grade students. In 1988, some 25,000 8th-graders and their parents, teachers, and school principals were surveyed. Follow-ups were conducted in 1990,1992 , and 1994, when a majority of these students were in 10th and 12th grades, and then 2 years after their scheduled high school graduation. A fourth follow-up was conducted in 2000.

NELS:88 is designed to provide trend data about critical transitions experienced by young people as they develop, attend school, and embark on their careers. It complements and strengthens state and local efforts by furnishing new information on how school policies, teacher practices, and family involvement affect student educational outcomes (i.e., academic achievement, persistence in school, and participation in postsecondary education). For the base year, NELS:88 includes a multifaceted student questionnaire, four cognitive tests, and
separate questionnaires for parents, teachers, and schools.

In 1990 , when the students were in 10th grade, the students, school dropouts, teachers, and school principals were surveyed. The 1988 survey of parents was not a part of the 1990 follow-up. In 1992, when most of the students were in 12th grade, the second followup conducted surveys of students, dropouts, parents, teachers, and school principals. Also, information from the students' transcripts was collected.

In 1994, the third follow-up of students took place. By this time, most of the survey participants had graduated from high school, and many had begun postsecondary education or entered the workforce. This follow-up focused on issues related to postsecondary access, employment, and whether high school dropouts had earned a high school credential (and, if so, by what route). In 2000, the fourth (and final) NELS:88 follow-up occurred. By this time, most of the participants had been out of high school for 8 years. The study focused on postsecondary enrollment and completion, transitions into the labor force, and family formation. For those who had enrolled in any postsecondary education, postsecondary transcripts were collected from each institution attended.

Indicator 22 uses data from NELS:88/90, "First Follow-up, 1990." Further information about the survey is available at http://nces.ed.gov/ surveys/nels88/.

## National Househould Education Surveys Program (NHES)

The National Household Education Surveys Program (NHES), conducted in 1991, 1993, 1995, 1996, 1999, 2001, 2003, and 2005, collects data on educational issues that cannot be addressed by school-level data. Each survey collects data from households on at least two topics; topics include adult education, early childhood program participation, parental

# Note 3: Other Surveys 

Continued
involvement in education, and before- and afterschool activities.

NHES surveys the civilian, noninstitutionalized U.S. population in the 50 states and the District of Columbia. Interviews are conducted using computer-assisted telephone interviewing. Data are collected from adults and occasionally from older children (grades 6-12). When children are sampled, data about them are collected from the parent or guardian who is most knowledgeable.

Although NHES is conducted primarily in English, provisions are made to interview persons who speak only Spanish. Questionnaires are translated into Spanish, and bilingual interviewers, who are trained to complete the interview in either English or Spanish, are employed. NHES only conducts interviews in English and Spanish, so if no respondent in the household can speak at least one of these two languages, then the interview is not completed.

Indicators 2, 10, and 29 use data from the NHES. Further information about the program is available at http://nces.ed.gov/nhes/.

## National Postsecondary Student Aid Study (NPSAS)

The National Postsecondary Student Aid Study (NPSAS) is based on a nationally representative sample of all students in postsecondary education institutions, including undergraduate, graduate, and first-professional students. For NPSAS:04, information was obtained from approximately 80,000 undergraduates and 11,000 graduate or first-professional students from about 1,400 postsecondary institutions. These students represented nearly 19 million undergraduate students, 3 million graduate students, and 300,000 first-professional students who were enrolled at some time between July 1, 2003, and June 30, 2004.

NPSAS is a comprehensive nationwide study designed to determine how students and their
families pay for postsecondary education and to describe some demographic and other characteristics of those enrolled. Students attending all types and levels of institutions are represented, including private (both not-for-profit and forprofit) and public 4-year colleges and universities, community colleges, and less-than-2-year institutions.

To be eligible for inclusion in the institutional sample, an institution must have satisfied the following conditions: (1) offers an education program designed for persons who have completed secondary education; (2) offers an academic, occupational, or vocational program of study lasting 3 months or longer; (3) offers access to the general public; (4) offers more than just correspondence courses; and (5) is located in the 50 states, the District of Columbia, or the Commonwealth of Puerto Rico.

Part-time and full-time students enrolled in academic or vocational courses or programs at these institutions, and not concurrently enrolled in a high school completion program, are eligible for inclusion in NPSAS. The first NPSAS, conducted in 1986-87, sampled students enrolled in fall 1986. Since the 1989-90 NPSAS, students who enrolled at any time during the year have been eligible for inclusion in the survey. This design change provides the opportunity to collect data necessary to estimate full-year financial aid awards.

Unless otherwise specified, all estimates in The Condition of Education using data from NPSAS include students in the 50 states, the District of Columbia, and the Commonwealth of Puerto Rico.

Each NPSAS survey provides information on the cost of postsecondary education, the distribution of financial aid, and the characteristics of both aided and nonaided students and their families. Following each survey, NCES publishes three major reports: Student Financing of Undergraduate Education, Student Financing of Graduate and First-Professional Education,
and Profile of Undergraduates in U.S. Postsecondary Education Institutions (see NCES 2006-184, 2006-185, 2006-186).

Indicators 46, 47, and 48 use data from NPSAS. Further information about the survey is available at http://nces.ed.gov/surveys/npsas/.

## Private School Universe Survey (PSS)

The Private School Universe Survey (PSS) was established in 1988 to ensure that private school data dating back to 1890 would be collected on a more regular basis. With the help of the Census Bureau, the PSS is conducted biennially to provide the total number of private schools, students, and teachers, and to build a universe of private schools in the 50 states and the District of Columbia to serve as a sampling frame of private schools for NCES sample surveys.

In the most recent PSS data collection, conducted in 2003-04, the survey was sent to 31,848 qualified private schools, and it had a response rate of 94.6 percent.

Indicator 4 uses data from the PSS. Further information on the surveys is available at http:// nces.ed.gov/surveys/pss/.

## Schools and Staffing Survey (SASS)

The Schools and Staffing Survey (SASS) is the nation's largest sample survey of America's elementary and secondary schools. First conducted in 1987-88, SASS periodically surveys the following:

- surveys public schools and collects data on school districts, schools, principals, teachers, and library media centers;
- surveys private schools and collects data on schools, principals, teachers, and library media centers;
- surveys schools operated by the Bureau of Indian Affairs (BIA) and collects data on schools, principals, teachers, and library media centers; and
- surveys public charter schools and collects data on schools, principals, teachers, and library media centers.

To ensure that the samples contain sufficient numbers for estimates, SASS uses a stratified probability sample design. Public and private schools are oversampled into groups based on certain characteristics. After the schools are stratified and sampled, the teachers within the schools are stratified and sampled based on their characteristics. For the 2003-04 SASS, a sample of public charter schools was included in the sample as part of the public school questionnaire.

Indicators 33, 34, and 35 use data from the SASS. Further information about the survey is available at http://nces.ed.gov/surveys/SASS/.

# Note 4: National Assessment of Educational Progress (NAEP) 

The National Assessment of Educational Progress (NAEP), governed by the National Assessment Governing Board (NAGB), is administered regularly in a number of academic subjects. Since its creation in 1969, NAEP has had two major goals: to assess student performance reflecting current educational and assessment practices and to measure change in student performance reliably over time. To address these goals, NAEP includes a main assessment and a long-term trend assessment. The two assessments are administered to separate samples of students at separate times, use separate instruments, and measure different educational content. Thus, results from the two assessments should not be compared.

## Main NAEP

Indicators 11, 12, 13, and 14 are based on the main NAEP. Begun in 1990, the main NAEP periodically assesses students' performance in several subjects in grades 4,8 , and 12 , following the curriculum frameworks developed by NAGB and using the latest advances in assessment methodology. NAGB develops the frameworks using standards developed within the field, using a consensus process involving educators, subject-matter experts, and other interested citizens. Each round of the main NAEP includes a student assessment and background questionnaires (for the student, teacher, and school) to provide information on instructional experiences and the school environment at each grade.

Since 1990, NAEP assessments have also been conducted to give results for participating states. States that choose to participate receive assessment results that report on the performance of students within the state. In its content, the state assessment is identical to the assessment conducted nationally. However, because the national NAEP samples were not, and are not, currently designed to support the reporting of accurate and representative state-
level results, separate representative samples of students are selected for each participating jurisdiction/state.

Beginning with the 2002 assessments, a combined sample of public schools was selected for both the state and national NAEP. This was done in response to the NCES/NAGB redesign of 1998. It was thought that drawing a subset of schools from all of the state samples to produce national estimates would reduce burden by decreasing the total number of schools participating in the state and national NAEP. From this group of schools, representing 50 states, a subsample was identified as the national subset.

Therefore, the national sample is a subset of the combined sample of students assessed in each participating state, plus an additional sample from the states that did not participate in the state assessment. This additional sample ensures that the national sample is representative of the total national student population. The full dataset is analyzed together, allowing all data to contribute to the final results and setting a single scale for the assessment. All results are then reported in the scale score metric used for the specific assessment.

The content and nature of the main NAEP evolve to match instructional practices, so the ability to measure change reliably over time is limited. As standards for instruction and curriculum change, so does the main NAEP. As a result, data from different assessments are not always comparable. However, recent main NAEP assessment instruments for science and reading have typically been kept stable for short periods, allowing for comparisons across time. For example, from 1990 to 2005, in general, assessment instruments in the same subject areas were developed using the same framework, shared a common set of questions, and used comparable procedures to sample and address student populations. In 2005, the NAGB revised the grade 12 mathematics

# Note 4: National Assessment of Educational Progress (NAEP) 

framework to reflect changes in high school mathematics standards and coursework. As a result, even though many questions are repeated from previous assessments, the 2005 results cannot be directly compared with those from previous years. For some subjects that are not assessed frequently, such as civics and the arts, no trend data are available. For more information regarding the 2005 framework revisions, see http://nces.ed.gov/nationsreport card/mathematics/whatmeasure.asp.

The main NAEP results are reported in The Condition of Education in terms of both average scale scores and achievement levels. The achievement levels define what students who are performing at the Basic, Proficient, and Advanced levels of achievement should know and be able to do. NAGB establishes achievement levels whenever a new main NAEP framework is adopted. As provided by law, NCES, upon review of congressionally mandated evaluations of NAEP, has determined that achievement levels are to be used on a trial basis and should be interpreted with caution. NAEP achievement levels have been widely used by national and state officials. The policy definitions of the achievement levels that apply across all grades and subject areas are as follows:

- Basic: This level denotes partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at each grade assessed.
- Proficient: This level represents solid academic performance for each grade assessed. Students reaching this level have demonstrated competency over challenging subject matter, including subject-matter knowledge, application of such knowledge to real-world situations, and analytical skills appropriate to the subject matter.
- Advanced: This level signifies superior performance at each grade assessed.

In some indicators, the percentage of students at or above Proficient or at or above Basic are reported. The percentage of students at or above Proficient includes students at the Advanced achievement level. Similarly, the percentage of students at or above Basic includes students at the Basic, those at the Proficient, and those at the Advanced achievement levels.

Unlike estimates from other sample surveys presented in this report, NAEP estimates that are potentially unstable (large standard error compared with the estimate) are not flagged as potentially unreliable. This practice for NAEP estimates is consistent with the current output from the NAEP online data analysis tool. The reader should always consult the appropriate standard errors when interpreting these findings. For additional information on NAEP, including technical aspects of scoring and assessment validity and more specific information on achievement levels, see http://nces.ed.gov/ nationsreportcard/.

## Student Accommodations

Until 1996, the main NAEP assessments excluded certain subgroups of students identified as "special needs students," including students with disabilities and students with limited English proficiency. For the 1996 and 2000 mathematics assessments and the 1998 and 2000 reading assessments, the main NAEP included a separate assessment with provisions for accommodating these students (e.g., extended time, small group testing, mathematics questions read aloud, and so on). Thus, for these years, there are results for both the unaccommodated assessment and the accommodated assessment. For the 2002, 2003, and 2005 reading and 2003 and 2005 mathematics assessments, the main NAEP did not include a separate unaccommodated assessment; only a single accommodated assessment was administered. The switch to a single accommodated assessment instrument was made after it was determined

## Note 4: National Assessment of Educational Progress (NAEP)

Continued
that accommodations in NAEP did not have any significant effect on student scores. Indicators 11 and 12 present NAEP results with and without accommodations.

## Long-Term Trend NAEP

The long-term trend NAEP measures basic student performance in reading, mathematics, science, and writing. Indicator 15 reports findings from the long-term reading and mathematics assessments. Since the mid-1980s, the long-term
trend NAEP has used the same instruments to provide a means to compare performance over time, but the instruments do not necessarily reflect current teaching standards or curricula. Results have been reported for students at ages 9,13 , and 17 in mathematics, reading, and science, and at grades 4,8 , and 11 in writing. Results from the long-term trend NAEP are presented as mean scale scores because, unlike the main NAEP, the long-term trend NAEP does not define achievement levels.

## Note 5: International Assessments

## Trends in International Mathematics and Science Study (TIMSS)

Indicator 17 uses data collected as part of the Trends in International Mathematics and Science Study (TIMSS). Under the auspices of the International Association for the Evaluation of Educational Achievement (IEA), TIMSS assessed the science and mathematics achievement of students in 41 countries in grades 3, 4,7 , and 8 , and in the final year of secondary school in 1995. Information about how mathematics and science learning takes place in each country was also collected. TIMSS asked students, their teachers, and their school principals to complete questionnaires about the curriculum, schools, classrooms, and instruction. The TIMSS assessment was repeated in 1999 in 45 countries at grade 8, and again in 2003 in 25 countries at grade 4 and 45 countries at grade 8 so that changes in achievement over time could be tracked. Moreover, TIMSS is closely linked to the curricula of the participating countries, providing an indication of the degree to which students have learned the concepts in mathematics and science that they have encountered in school.

## 2003 TIMSS

For the 2003 assessment, the international desired population consisted of all students in the country who were enrolled in the upper of the two adjacent grades that contained the greatest proportion of 9- and 13-year-olds at the time of testing (Populations 1 and 2, respectively, except only the upper of the two adjacent grades). In the United States and most countries, this corresponded to grades 4 and 8. In all, 25 countries participated at grade 4, and 46 countries participated at grade 8 . (A list of participating countries is available on the TIMSS website at http://nces.ed.gov/timss.)

Approximately one-third of the 1995 4thgrade assessment items and one-half of the 1999 8th-grade assessment items were used in the 2003 assessment. Development of the 2003 assessment began with an update of the assessment frameworks to reflect changes in the curriculum and instruction of participating countries. "Problem-solving and inquiry" tasks were added to the 2003 assessment to assess how well students could draw on and integrate information and processes in mathematics and science as part of an investigation or in order to solve problems.

For further information on TIMSS, see http:// nces.ed.gov/timss.

# Note 6: International Standard Classification of Education 

## Levels of Education

Indicators 41 and 43 use the International Standard Classification of Education (ISCED) (OECD 1999) to compare educational systems in different countries. The ISCED is the standard used by many countries to report education statistics to UNESCO and the Organization for Economic Cooperation and Development (OECD). The ISCED divides educational systems into the following seven categories, based on six levels of education.

Education preceding the first level (early childhood education) usually begins at age 3 , 4 , or 5 (sometimes earlier) and lasts from 1 to 3 years when it is provided. In the United States, this level includes nursery school and kindergarten.

Education at the first level (primary or elementary education) usually begins at age 5,6 , or 7 and continues for about 4 to 6 years. For the United States, the first level starts with 1st grade and ends with 6th grade.

Education at the second level (lower secondary education) typically begins at about age 11 or 12 and continues for about 2 to 6 years. For the United States, the second level starts with 7 th grade and ends with 9 th grade. Education at the lower secondary level continues the basic programs of the first level, although teaching is typically more subject focused, often using more specialized teachers who conduct classes in their field of specialization. The main criterion for distinguishing lower secondary education from primary education is whether programs begin to be organized in a more subject-oriented pattern, using more specialized teachers who conduct classes in their field of specialization. If there is no clear breakpoint for this organizational change, the lower secondary education is considered to begin at the end of 6 years of primary education. In countries with no clear division between lower secondary and upper secondary education, and where lower secondary education lasts for more than 3
years, only the first 3 years following primary education are counted as lower secondary education.

Education at the third level (upper secondary education) typically begins at age 15 or 16 and lasts for approximately 3 years. In the United States, the third level starts with 10th grade and ends with 12 th grade. Upper secondary education is the final stage of secondary education in most OECD countries. Instruction is often organized along subject-matter lines, in contrast to the lower secondary level, and teachers typically must have a higher level, or more subject-specific, qualification. There are substantial differences in the typical duration of programs both across and between countries, ranging from 2 to 5 years of schooling. The main criteria for classifications are (1) national boundaries between lower and upper secondary education; and (2) admission into educational programs, which usually requires the completion of lower secondary education or a combination of basic education and life experience that demonstrates the ability to handle the subject matter in upper secondary schools.

Education at the fourth level (postsecondary nontertiary education) straddles the boundary between secondary and postsecondary education. This program of study, which is primarily vocational in nature, is generally taken after the completion of secondary school, typically lasts from 6 months to 2 years, and may be considered as an upper secondary or postsecondary program in a national context. Although the content of these programs may not be significantly more advanced than upper secondary programs, these programs serve to broaden the knowledge of participants who have already gained an upper secondary qualification. This level of education is included for select countries in indicator 41.

Education at the fifth level (first stage of tertiary education) includes programs with more

## Note 6: International Standard Classification of Education

advanced content than those offered at the two previous levels. Entry into programs at the fifth level normally requires successful completion of either of the two previous levels.

Tertiary-type A programs provide an education that is largely theoretical and is intended to provide sufficient qualifications for gaining entry into advanced research programs and professions with high-skill requirements. Entry into these programs normally requires the successful completion of an upper secondary education; admission is competitive in most cases. The minimum cumulative theoretical duration at this level is 3 years of full-time enrollment. In the United States, tertiary-type A programs include first university programs that last 4 years and lead to the award of a bachelor's degree, second university programs that lead to a master's degree, and professional programs that lead to a first-professional degree.

Tertiary-type B programs are typically shorter than tertiary-type A programs and focus on practical, technical, or occupational skills for
direct entry into the labor market, although they may cover some theoretical foundations in the respective programs. They have a minimum duration of 2 years of full-time enrollment at the tertiary level. In the United States, such programs are often provided at community colleges and lead to an associate's degree.

Education at the sixth level (advanced research qualification) is provided in graduate and professional schools that generally require a university degree or diploma as a minimum condition for admission. Programs at this level lead to the award of an advanced, postgraduate degree, such as a Ph.D. The theoretical duration of these programs is 3 years of full-time enrollment in most countries (for a cumulative total of at least 7 years at levels five and six), although the length of actual enrollment is often longer. Programs at this level are devoted to advanced study and original research.

For indicators 41 and 43, postsecondary education includes the fifth and sixth levels, except as noted.

# Note 7: Measures of Student Persistence and Progress 

Various measures have been developed to provide information about student persistence and progress through elementary and secondary education. Three measures are presented in this report: status dropout rate (indicator 23), the public school averaged freshman graduation rate (indicator 24 ), and the educational attainment of 25 - to 29 -year-olds (indicator 27). The three indicators in this volume that present these measures each employ a different analytic method and dataset to document a different aspect of the complex high school graduation and dropout process. No one data source provides comprehensive information on the graduation and dropout process on an annual basis, but these three indicators presented here complement one another and draw upon the particular strength of their respective data. Each indicator is not without its limitations, however, which makes it critical to have multiple indicators when addressing the question of student persistence. A brief description of the relevant methodology and data used by each indicator follows.

## Status Dropout Rate

Indicator 23 reports status dropout rates by race/ethnicity. Status dropout rates measure the extent of the dropout problem for a population and as such can be used to estimate the need for further education and training in that population. This indicator uses October Current Population Survey (CPS) data to estimate the percentage of the civilian, noninstitutionalized population ages 16 through 24 who are not in high school and who have not earned a high school credential (either a diploma or an equivalency credential such as a General Educational Development [GED] certificate), irrespective of when they dropped out. An advantage of using CPS data to compute this status dropout rate is that it can be computed on an annual basis for various demographic subgroups of adults and can be used to report a national rate that includes dropouts of public and private schools. The disadvantages of using

CPS data to compute status dropout rates is that they (1) exclude all military personnel and incarcerated or institutionalized persons and (2) include as dropouts individuals who never attended U.S. schools, including immigrants who did not complete the equivalent of a high school education in their home country.

## Public School Averaged Freshman Graduation Rate

Indicator 24 examines the percentage of public high school students who graduate on time by using the averaged freshman graduation rate (AFGR). The AFGR is a measure of the percentage of the incoming freshman class that graduates 4 years later. The AFGR is the number of graduates with a regular diploma divided by the estimated count of incoming freshmen 4 years earlier as reported through the NCES Common Core of Data (CCD), the survey system based on state education departments' annual administrative records. The estimated count of incoming freshmen is calculated by summing 10th-grade enrollment 2 years before the graduation year, 9 th-grade enrollment 3 years before the graduation year, and 8th-grade enrollment 4 years before the graduation year and dividing this amount by 3. The intent of this averaging is to account for the high rate of grade retention in the freshman year, which adds 9th-grade repeaters from the previous year to the number of students in the incoming freshman class each year. Enrollment counts include a proportional distribution of students not enrolled in a specific grade. An advantage of using CCD data to calculate the AFGR is that they are available on an annual basis by state; however, the demographic details are limited.

## Educational Attainment of 25- to 29-Year-Olds

Indicator 27 examines the educational attainment of adults just past the age when most would traditionally be expected to complete

## Note 7: Measures of Student Persistence and Progress

their postsecondary education. This indicator uses March CPS data to estimate the percentage of civilian, noninstitutionalized people ages 25 through 29 who are out of high school and who have earned a high school credential (either a diploma or an equivalency credential such as a GED); the rate can be reported by race/ethnicity and other demographic variables. The rate does not differentiate between those who graduated from public schools, who graduated from private schools, or who earned a GED. The rate also includes individuals who never attended high school in the United States. An advantage of using CPS data to compute the educational attainment rate is that it can be computed on an annual basis for various demographic subgroups of adults and can be used to report a national rate that includes public and private schools. A disadvantage of using CPS data to compute the educational attainment rate is that these data exclude all military personnel and incarcerated or institutionalized persons.

Even though indicators 23, 24, and 27 document different aspects of student persistence, a number of important differences between these indicators should be noted and recognized as likely factors responsible for the divergence between their respective estimates. General differences can be found in the population of interest, information source, and data collection time frame. For example, the three indicators focus on different populations: indicator 23 focuses on 16- through 24-year-olds between 1972 and 2005; indicator 24 focuses on the number of
graduates in 2003-04 based on the 2000-01 freshman class; and indicator 27 focuses on 25through 29-year-olds between 1971 and 2006. The source of information used to construct the indicators also varies. Indicator 24 is produced from the CCD, a universe survey system based on state education departments' annual administrative records, while indicators 23 and 27 use data from the CPS, a sample survey of the civilian noninstitutional population.

Given such differences, one would not expect to see identical or even similar estimates. In fact, very reasonable differences should be apparent. For example, if one estimate measures only regular diplomas completed on time, it should be smaller than one that is constructed to measure both regular diplomas and GEDs. Once accounting for these methodological differences, the divergence between estimates tends to be in the correct direction and of the right magnitude.

This supplemental note is intended to provide only a brief overview of some of the commonly available data that address the complex issue of high school completion. For more detail on methods used to analyze dropout and graduation rates in these indicators and other related measures of student persistence and progress, see supplemental notes 2 and 3 and the publications by Seastrom et al. (NCES 2006-604; NCES 2006-605) and Laird, DeBell, and Chapman (NCES 2007-024).

## Note 8: Student Disabilities

Indicators 7 and 31 use data from the U.S. Department of Education's Office of Special Education Programs (OSEP), which collects information on students with disabilities as part of the implementation of the Individuals with Disabilities Education Act (IDEA). OSEP classifies disabilities according to 13 categories. (For more detailed definitions of these categories, see the part B and C data dictionaries at http://www.ideadata.org.)

## Disability Categories

## Autism

A developmental disability significantly affecting verbal and nonverbal communication and social interaction, generally evident before age 3 , that adversely affects a child's educational performance. Other characteristics often associated with autism are engagement in repetitive activities and stereotyped movements, resistance to environmental change or change in daily routines, and unusual responses to sensory experiences.

## Deaf-blindness

Concomitant hearing and visual impairments, the combination of which causes such severe communication and other developmental and educational problems that the student cannot be accommodated in special education programs solely for children with deafness or children with blindness.

## Developmental Delay

This term may apply to children ages 3 through 9 who are experiencing developmental delays in one or more of the following areas: physical development, cognitive development, communication development, social or emotional development, or adaptive development, and who therefore need special education and related services. It is optional for states to adopt and use this term to describe any child within its jurisdiction. A local education agency (LEA)
may use the term if its state has adopted it for use, but it must conform its use of the term to that of the state.

## Emotional Disturbance

A condition exhibiting one or more of the following characteristics over a long period of time and to a marked degree that adversely affects a child's educational performance:

1. An inability to learn that cannot be explained by intellectual, sensory, or health factors.
2. An inability to build or maintain satisfactory interpersonal relationships with peers and teachers.
3. Inappropriate types of behavior or feelings under normal circumstances.
4. A general pervasive mood of unhappiness or depression.
5. A tendency to develop physical symptoms or fears associated with personal or school problems.

The term includes schizophrenia. The term does not apply to children who are socially maladjusted, unless it is determined that they have an emotional disturbance.

## Hearing Impairment

An impairment in hearing, whether permanent or fluctuating, that adversely affects a child's educational performance, but that is not included under the definition of deafness in this section.

Although children and youth with deafness are not included in the definition of hearing impairment, they are counted in the hearing impairment category.

## Mental Retardation

Significantly subaverage general intellectual functioning, existing concurrently with deficits

# Note 8: Student Disabilities 

Continued
in adaptive behavior and manifested during the developmental period, that adversely affects a child's educational performance.

## Multiple Disabilities

Concomitant impairments (such as mental retardation-blindness, mental retardationorthopedic impairment, etc.), the combination of which causes such severe educational needs that they cannot be accommodated in special education programs solely for one of the impairments. The term does not include deaf-blindness.

## Orthopedic Impairment

A severe orthopedic impairment that adversely affects a child's educational performance. The term includes impairments caused by congenital anomaly (e.g., clubfoot, absence of some member, etc.), impairments caused by disease (e.g., poliomyelitis, bone tuberculosis, etc.), and impairments from other causes (e.g., cerebral palsy, amputations, and fractures or burns that cause contractures).

## Other Health Impairment

Having limited strength, vitality, or alertness, including a heightened alertness to environmental stimuli, that results in limited alertness with respect to the educational environment, that

- is due to chronic or acute health problems such as asthma, attention deficit disorder or attention deficit hyperactivity disorder, diabetes, epilepsy, a heart condition, hemophilia, lead poisoning, leukemia, nephritis, rheumatic fever, and sickle cell anemia; and
- adversely affects a child's educational performance.

## Specific Learning Disability

A disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, that may manifest itself in an imperfect ability to listen, think, speak, read, write, spell, or to do mathematical calculations, including conditions such as perceptual disabilities, brain injury, minimal brain dysfunction, dyslexia, and developmental aphasia. The term does not include learning problems that are primarily the result of visual, hearing, or motor disabilities, of mental retardation, of emotional disturbance, or of environmental, cultural, or economic disadvantage.

## Speech or Language Impairment

A communication disorder such as stuttering, impaired articulation, a language impairment, or a voice impairment that adversely affects a child's educational performance.

## Traumatic Brain Injury

An acquired injury to the brain caused by an external physical force, resulting in total or partial functional disability or psychosocial impairment, or both, that adversely affects a child's educational performance. The term applies to open or closed head injuries resulting in impairments in one or more areas, such as cognition; language; memory; attention; reasoning; abstract thinking; judgment; problem solving; sensory, perceptual, and motor abilities; psychosocial behavior; physical functions; information processing; and speech. The term does not apply to brain injuries that are congenital or degenerative, or to brain injuries induced by birth trauma.

## Visual Impairments

An impairment in vision that, even with correction, adversely affects a child's educational performance. The term includes both partial sight and blindness.

# Note 9: Classification of Postsecondary Education Institutions 

The U.S. Department of Education's Integrated Postsecondary Education Data System (IPEDS) employs various categories to classify postsecondary institutions. This note outlines the different categories used in varying combinations in indicators $8,9,26,28,42,44,47$, and 48.

## Basic IPEDS Classifications

The term "postsecondary institutions" is the category used to refer to institutions with formal instructional programs and a curriculum designed primarily for students who have completed the requirements for a high school diploma or its equivalent. For many analyses, however, comparing all institutions from across this broad universe of postsecondary institutions would not be appropriate. Thus, postsecondary institutions are placed in one of three levels, based on the highest award offered at the institution:

- 4-year-and-above institutions: Institutions or branches that award a 4-year degree or higher in one or more programs, or a postbaccalaureate, post-master's, or post-first-professional certificate.
- 2-year but less-than-4-year institutions: Institutions or branches that confer at least a 2 -year formal award (certificate, diploma, or associate's degree) or that have a 2 -year program creditable toward a baccalaureate degree.
- Less-than-2-year institutions: Institutions or branches that have programs lasting less than 2 years that result in a terminal occupational award or are creditable toward a degree at the 2-year level or higher.

Postsecondary institutions are further divided according to these criteria: degree-granting versus non-degree-granting; type of financial control; and Title IV-participating versus nonTitle IV-participating.

Degree-granting institutions offer associate's, bachelor's, master's, doctoral, and/or first-professional degrees that a state agency recognizes or authorizes. Non-degree-granting institutions offer other kinds of credentials and exist at all three levels. The number of 4 -year-and-above non-degree-granting institutions is small compared with the number of non-degree granting institutions at both the 2-year but less-than-4year and less-than-2-year levels.

IPEDS classifies institutions at each of the three levels of institutions by type of financial control: public; private not-for-profit; or private for-profit (e.g., proprietary schools). Thus, IPEDS divides the universe of postsecondary institutions into nine different "sectors." In some sectors (for example, private for-profit 4 -year institutions), the number of institutions is small relative to other sectors. Institutions in any of these nine sectors can be degree- or non-degree-granting.

Institutions in any of these nine sectors can also be Title IV-participating or not. For an institution to participate in federal Title IV Higher Education Act, Part C, financial aid programs, it must offer a program of study at least 300 clock hours in length; have accreditation recognized by the U.S. Department of Education; have been in business for at least 2 years; and have a Title IV participation agreement with the U.S. Department of Education. All indicators in this volume using IPEDS data are restricted to Title IV-participating institutions.

In some indicators based on IPEDS data, 4-year-and-above degree-granting institutions are further classified according to the highest degree awarded. Doctoral institutions award at least 20 doctoral degrees per year. Master's institutions award at least 20 master's degrees per year. The remaining institutions are considered to be other 4-year institutions. The number of degrees awarded by an institution in a given year is obtained for each institution from data published in the IPEDS "Completions Survey" (IPEDS-C).

# Note 9: Classification of Postsecondary Education Institutions 

Continued

Indicators 8, 26, 42, 44, and 47 include 2-year (short for 2-year but less-than-4-year) and 4-year-and-above degree-granting institutions in their analyses.

Indicators 9, 28, and 48 include 4-year-andabove degree-granting institutions.

## Note 10: Fields of Study for Postsecondary Degrees

The general categories for fields of study used in indicators 28 and 42 were derived from the 2000 edition of the Classification of Instructional Programs (CIP-2000). To facilitate trend comparisons, in some instances aggregations of some categories have been made. These aggregations are as follows:

Agriculture and natural resources: agriculture, agriculture operations and related sciences; and natural resources and conservation.

Business: business, management, marketing, and related support services; and personal and culinary services.

Communication, journalism, and related programs: communications, journalism, and related programs; and communications technologies/technicians and support services.

Engineering: engineering; engineering technologies/technicians; construction trades; and mechanic and repair technologies/ technicians.

Data may differ from previously published figures as data from earlier years have been reclassified when necessary to make them conform to the new taxonomy. Further information about the CIP-2000 is available at http: //nces.ed.gov/pubs2002/cip2000/.

## Using the Consumer Price Index (CPI) to Adjust for Inflation

The Consumer Price Indexes (CPIs) represent changes in the prices of all goods and services purchased for consumption by households. Indexes vary for specific areas or regions, periods of time, major groups of consumer expenditures, and population groups. Indicators 20, 37, 38, 39, 40, 44, 46, and 47 in The Condition of Education use the U.S. All Items CPI for All Urban Consumers (CPI-U).

The CPI-U is the basis for both the calendar year CPI and the school year CPI. The calendar year CPI is the same as the annual CPI-U. The school year CPI is calculated by adding the monthly CPI-U figures, beginning with July of the first year and ending with June of the following year, and then dividing that figure by 12 . The school year CPI is rounded to three decimal places. Data for the CPI-U are available on the Bureau of Labor Statistics (BLS) website (see below). Also, figures for both the calendar year CPI and the school year CPI can be obtained from the Digest of Education Statistics, 2006 (NCES 2007-017), an annual publication of the National Center for Education Statistics (NCES).

Although the CPI has many uses, its principal function in The Condition of Education is to convert monetary figures (salaries, expenditures, income, etc.) into inflation-free dollars to allow comparisons over time. For example, due to inflation, the buying power of a teacher's salary in 1998 is not comparable to that of a teacher's salary in 2002. In order to make such a comparison, the 1998 salary must be converted into 2002 constant dollars by multiplying the 1998 salary by a ratio of the 2002 CPI over the 1998 CPI. As a formula, this is expressed as

$$
1998 \text { salary } \times \frac{(2002 \mathrm{CPI})}{(1998 \mathrm{CPI})}=\frac{1998 \text { salary in }}{2002 \text { constant }} \text { dollars }
$$

The reader should be aware that there are alternative price indexes to the CPI that could be used to make these adjustments. These alternative adjustments might produce findings that differ from the ones presented here. For more detailed information on how the CPI is calculated or the other types of CPI indexes, go to the BLS website (http://www.bls.gov/cpi/).

## Classifications of Expenditures for Elementary and Secondary Education

Indicators 38, 39, and 40 examine expenditures for public elementary and secondary education. Indicator 38 uses six categories of expenditures: total expenditures, instruction expenditures, administration expenditures, operation and maintenance expenditures, capital expenditures, and other expenditures. Indicator 39 uses instruction expenditures in its analysis. Indicator 40 uses two categories of expenditures in its analysis: total expenditures and current expenditures.

Total expenditures for elementary and secondary education include all expenditures allocable to per student costs: these are all current expenditures for regular school programs, interest on school debt, and capital outlay. Expenditures on education by other agencies or equivalent institutions (e.g., the Department of Health and Human Services and the Department of Agriculture) are included.

Current expenditures include expenditures for instruction, administration, operation and maintenance, and other expenditures with the exception of capital expenditures (capital outlays and interest on debt) and current expenditures for nonelementary and nonsecondary programs (see Total expenditures, above). Thus, current expenditures include such items as salaries for school personnel, fixed charges, student transportation, school books and materials, and energy costs.

Instruction expenditures include salaries and benefits for teachers and instructional aides,

## Note 11: Finance

Continued
supplies, and purchased services such as instruction via television. Also included are tuition expenditures to other local education agencies.

Administration expenditures include expenditures for general administration (salary, benefits, supplies, and contractual fees for boards of education staff and executive administration) and school administration (salary, benefits, supplies, and contractual fees for the office of the principal, full-time department chairpersons, and graduation expenses).

Operation and maintenance expenditures include salary, benefits, supplies, and contractual fees for supervision of operations and maintenance; operating buildings (heating, lighting, ventilating, repair, and replacement); care and upkeep of grounds and equipment; vehicle operations and maintenance (other than student transportation); security; and other operations and maintenance services.

Capital expenditures include interest on school debt and capital outlays. Capital expenditures represent the value of educational capital acquired or created during the year in ques-tion-that is, the amount of capital formation regardless of whether the capital outlay was financed from current revenue or by borrowing. Capital expenditures include outlays on construction, land and existing structures, instructional equipment, and all other equipment.

Other expenditures include funds for student support (health, attendance, and speech pathology services); other instructional staff (curriculum development, staff training, libraries, and media and computer centers); student transportation; other support services, including business support services and central support services; food services; enterprise operations (operations funded by sales of products or services together with amounts for direct program support made by state education agencies for local school districts); and other current
expenditures (adult education, community colleges, private school programs funded by local and state education agencies, and community services).

## Classifications of Revenue

In indicator 37, revenue is classified by source (federal, state, or local). Revenue from federal sources includes direct grants-in-aid to schools or agencies, funds distributed through a state or intermediate agency, and revenue in lieu of taxes to compensate a school district for nontaxable federal institutions within a district's boundary. Revenue from state sources includes both direct funds from state governments and revenue in lieu of taxation. Revenue from local sources includes revenue from such sources as local property and nonproperty taxes; investments; and revenue from student activities, textbook sales, transportation and tuition fees, and food services. Intermediate revenue comes from sources that are not local or state education agencies, but operate at an intermediate level between local and state education agencies and possess independent fundraising capabil-ity-for example, county or municipal agencies. Intermediate revenue is included in local revenue totals. In indicator 37, local revenue is classified as either local property tax revenue or other local revenue.

In indicator 37, alternative local government revenue numbers for Texas were used in the calculation of the percentage distribution for the South in 1992-93 because, for that state, much of the revenue that was classified as local government property taxes was classified as revenue from intermediate sources. The alternative Texas local government property tax revenue for 1992-93 was calculated by applying the average of the proportions of the 1991-92 and 1993-94 local government property tax revenue to all local government revenue to the 1992-93 total for all local government revenue. Other local government revenue was calculated in a similar fashion.

## The Variation in Expenditures per Student and the Theil Coefficient

Indicator 39 uses the Theil coefficient to measure the variation in expenditures per pupil in regular public school elementary and secondary schools in the United States.

The Theil coefficient was developed by Henri Theil to measure the amount of information conveyed by a single message that an event has occurred. It was derived from the study of what Theil called the "information concept." If we know an event is likely (i.e., the probability of the event is close to 1.0 ), then the amount of information conveyed is low (i.e., it is no surprise that the event occurred). But if the probability is low (i.e., near zero), a message saying it occurred provides a significant amount of information. Intuitively, and later rigorously proven by Theil and others, the function of the amount of information conveyed is logarithmic (i.e., $\mathrm{h}(\mathrm{z})=\ln (1 / \mathrm{z})$, where $\mathrm{h}=$ information function and $\mathrm{z}=$ probability of event).

Having developed the information function as a measure of the amount of information conveyed, Theil then suggested that this information function could also be used as a measure of dispersion. For example, if instructional expenditures per pupil in the nation are relatively close together (i.e., low disparity), then relatively little information would be provided by random draws of the districts (i.e., the $1 / z_{i}$, the probabilities, are high, but the value of the information function, the sum of the logarithms, is low). In contrast, if instructional expenditures per pupil are very dissimilar, then probabilities for drawing a given level of expenditures are lower, and the information gained from a random draw will be high. Thus, the information function can be a measure of dispersion, and a comparison of the values of Theil coefficients for groups within a set (i.e., districts within the nation) will indicate relative dispersion and any variations that may exist among them. The Theil coefficient was subse-
quently used to measure the trends in variation of a number of items, including expenditures per student (see NCES 2000-020 and Murray, Evans, and Schwab 1998).

The Theil coefficient has a convenient property when the individual units of observation (e.g., school districts) can be aggregated into subgroups (e.g., states): the Theil coefficient for the aggregation of all the individual units of observation can be decomposed into a measure of the variation within the subgroups and a measure of the variation between the subgroups. Hence, in the examination of the variation in instructional expenditures in the United States, the national variation can be decomposed into measures of between-state and within-state variation.

The between-state Theil coefficient, $\mathrm{T}_{\mathrm{B}}$, equals:

$$
T_{B}=\sum_{k=1}^{K}\left(P_{k} \bar{X}_{k} / \bar{X}\right) \ln \left(\bar{X}_{k} / \bar{X}\right)
$$

where $\mathrm{P}_{\mathrm{k}}$ is the enrollment in state $k, \mathrm{X}\{\mathrm{bar}\}_{\mathrm{k}}$ is the student-weighted mean expenditure per student in state $k$, and $\mathrm{X}\{\mathrm{bar}\}$ is the studentweighted mean expenditure per student for the country.

The within-state Theil coefficient, $\mathrm{T}_{W}$, equals:

$$
T_{W}=\sum_{k=1}^{K}\left(P_{k} \bar{X}_{k} / \bar{X}\right) T_{k}
$$

where $T_{k}$ is the Theil coefficient for state $k$.
$\mathrm{T}_{k}$ equals:

$$
T_{k}=\frac{\sum_{j=1}^{J_{k}} P_{j k} X_{j k} \ln \left(X_{j k} / \bar{X}_{k}\right)}{\sum_{j=1}^{k_{k}} P_{i k} X_{j k}}
$$

where $P_{j k}$ is the enrollment of district $j$ in state $k$ and $X_{j k}$ is the mean expenditure per student of district $j$ in state $k$.

The national Theil coefficient, T, is

$$
T=T_{W}+T_{B}
$$

## Note 11: Finance

Continued

## Classifications of Expenditures for International Comparisons

Indicator 41 presents international data on public and private expenditures for instructional and noninstructional educational institutions. Instructional educational institutions are educational institutions that directly provide instructional programs (i.e., teaching) to individuals in an organized group setting or through distance education. Business enterprises or other institutions providing short-term courses of training or instruction to individuals on a "one-to-one" basis are not included. Noninstructional educational institutions are educational institutions that provide administrative, advisory, or professional services to other educational institutions, although they do not enroll students themselves. Examples include national, state, and provincial bodies in the private sector; organizations that provide education-related services such as vocational and psychological counseling; and educational research.

Public expenditures refer to the spending of public authorities at all levels. Total public expenditures used for the calculation in indicator 41 correspond to the nonrepayable current and capital expenditures of all levels of the government directly related to education. Expenditures that are not directly related to education (e.g., culture, sports, youth activities, etc.) are, in principle, not included. Expenditures on education by other ministries or equivalent
institutions (e.g., Health and Agriculture) are included. Public subsidies for students' living expenses are excluded to ensure international comparability of the data.

Private expenditures refer to expenditures funded by private sources (i.e., households and other private entities). "Households" mean students and their families. "Other private entities" include private business firms and nonprofit organizations, including religious organizations, charitable organizations, and business and labor associations. Private expenditures comprise school fees; the cost of materials such as textbooks and teaching equipment; transportation costs (if organized by the school); the cost of meals (if provided by the school); boarding fees; and expenditures by employers on initial vocational training. Private educational institutions are considered to be service providers and do not include sources of private funding.

Current expenditures include final consumption expenditures (e.g., compensation of employees, consumption of intermediate goods and services, consumption of fixed capital, and military expenditures); property income paid; subsidies; and other current transfers paid. Capital expenditures include spending to acquire and improve fixed capital assets, land, intangible assets, government stocks, and nonmilitary, nonfinancial assets, as well as spending to finance net capital transfers.

# Note 12: Measuring High School Coursetaking 

There are various ways to measure the academic coursework that students complete. For example, one can measure the number of courses a student has completed in different subjects (e.g., whether a student completed two, three, or four courses in mathematics). If one is interested in how common it is for students to complete certain courses, one can measure the percentage of high school students who have completed those courses. Yet another method is to measure the highest level of coursework completed in different subjects (e.g., whether a student's most academically challenging mathematics course was algebra I, trigonometry, or calculus). Based on these three methods, analysts have created different measures to categorize high school coursetaking. This supplemental note describes the coursetaking taxonomies used in the Special Analysis of The Condition of Education 2007.

All of the coursetaking data used in the Special Analysis come from transcripts of graduates of public and private high schools, which were collected as part of the U.S. Department of Education's National Assessment of Educational Progress (NAEP), Education Longitudinal Study of 2002 (ELS:2002), National Education Longitudinal Study of 1988 (NELS:88), and the High School \& Beyond study (HS\&B). It is important to note that comparability cannot be perfect because (1) the Secondary School Taxonomy (SST) was revised in 1998, (2) these data come from different transcript collections, thus introducing the possibility of minor variations in the coding methodology even though steps were taken to replicate the data collection and coding methodology in each study, and (3) these data used slightly different sample selection criteria when determining high school graduation status.

The high school courses taken by students are organized according to the Classification of Secondary School Courses (CSSC) and the Secondary School Taxonomy (SST). All courses in a student's transcript are coded with a CSSC
value after checking course titles on the student's transcripts with course catalogs from the student's high school describing the contents of those courses. These coded courses are then assigned to broader course groupings, forming the academic levels in each subject area, using the Secondary School Taxonomy (SST).

Course credits are expressed in Carnegie units. A Carnegie unit is a standard of measurement used for secondary education that is equivalent to the completion of a course that meets one period per day for one school year, where a period is typically at least 40 minutes.

Transcript studies are a reliable source of information but they do have limitations. One limitation is that transcript studies can describe the intended—but not the actual-curriculum. The content and instructional methods of one course taught in one school by a certain teacher may be different from the content and instructional methods of another course classified as having the same CSSC code taught in another school, or even the same school, by a different teacher. Nevertheless, validation studies and academic research have shown significant differences between the highest level of academic courses completed by students and their scores on tests of academic achievement (Chaney, Burgdorf, and Atash 1997).

## Academic Pipelines

Academic "pipelines" organize transcript data in English, science, mathematics, and foreign language into levels based on the normal progression and difficulty of courses within these subject areas. Each level includes courses either of similar academic challenge and difficulty or at the same stage in the progression of learning in that subject area. In the mathematics pipeline, for example, algebra I is placed at a level lower in the pipeline continuum than is algebra II because algebra I is traditionally completed before algebra II and is generally less academically difficult or complex.

# Note 12: Measuring High School Coursetaking 

Continued

Classifying transcript data into these levels allows one to infer that high school graduates who have completed courses at the higher levels of a pipeline have completed more advanced coursework than graduates whose courses fall at the lower levels of the pipeline. Tallying the percentage of graduates who completed courses at each level permits comparisons of the percentage of high school graduates in a given year who reach each of the levels, as well as comparisons among different graduating classes.

In classifying students' courses from their transcripts according to a pipeline, only the courses completed with a passing grade in a subject area are included and not courses attempted. The inability to identify the number and types of courses attempted is due to inconsistent school reporting procedures. For example, many students retake courses they fail. In these instances, some schools report all courses attempted, while others report only the last course taken, substituting the passing grade. The pipeline also does not provide information on how many courses graduates completed in a particular subject area. Graduates are placed at a particular level in the pipeline based on the level of their highest completed course, regardless of whether they completed courses that would fall lower in the pipeline. Thus, graduates who completed year 3 of (or 11th-grade) French did not necessarily complete the first 2 years.

## Mathematics Pipeline

Originally developed by Burkam and Lee (NCES 2003-01), the mathematics pipeline progresses from no mathematics courses or nonacademic courses to low, middle, and advanced academic coursework. Each level in the pipeline represents the highest level of mathematics coursework that a graduate completed in high school. Thus, a graduate whose highest course is at the low academic level progressed no further in the mathematics pipeline and did not complete a traditional algebra I course, a prerequisite for higher level mathematics in
high school. The mathematics pipeline has eight levels; however, two of these levels can be combined to create a "middle academic level," and the top three levels can be combined to create an "advanced academic level."

## No Mathematics

Includes graduates who completed either no coursework in mathematics or only basic or remedial-level mathematics. It is thus possible for a graduate to have taken one or more courses in mathematics, but to be placed in the no mathematics level.

## Nonacademic Level

Highest completed courses are in general mathematics or basic skills mathematics, such as general mathematics I or II; basic mathematics I, II, or III; consumer mathematics; technical or vocational mathematics; and mathematics review.

## Low Academic Level

Highest completed courses are preliminary courses (e.g., prealgebra) or mathematics courses of reduced rigor or pace (e.g., algebra I taught over the course of 2 academic years). Considered to be more academically challenging than nonacademic courses, courses at this level include prealgebra; algebra I, part I; algebra I, part II; and geometry (informal).

## Middle Academic Level

The middle academic level is divided into two sublevels, each of which is considered to be more academically challenging than the nonacademic and low academic levels, though the first level is not considered as challenging as the second level.

## Algebra I/Geometry Level

Highest completed courses include algebra I; plane geometry; plane and solid geometry; unified mathematics I and II; and pure mathematics.

# Note 12: Measuring High School Coursetaking 

## Algebra II Level

Highest completed course is algebra II or unified mathematics III.

## Advanced Academic Level

The advanced academic level is divided into three sublevels, each of which is considered more academically challenging than the nonacademic, low academic, and middle academic levels, though the first level is not considered as challenging as the second level, nor the second level as challenging as the third.

## Trigonometry/Algebra III Level

Highest completed course is algebra III; algebra/trigonometry; algebra/analytical geometry; trigonometry; trigonometry/solid geometry; analytical geometry; linear algebra; probability; probability/statistics; statistics; statistics (other); or an independent study.

## Precalculus Level

Highest completed course is precalculus or an introduction to analysis.

## Calculus Level

Highest completed course is Advanced Placement (AP) calculus; calculus; or calculus/analytical geometry.

## Science Pipeline

Unlike mathematics and other subjects, such as foreign languages, coursework in science does not follow a common or easily defined sequence. Depending on a school's curriculum, students can choose from several courses with minimal sequencing requirements. Consequently, the method used to construct the science pipeline differs from that used to construct the mathematics pipeline. First, all science courses were placed in one of four groups based on subject matter: (1) life science (e.g., biology, ecology, zoology); (2) chemistry; (3) physics; and (4) all other physical sciences (e.g., geology, earth science, physical science). Second, a pipeline was constructed for each of these
four groups. Third, the pipelines for chemistry, physics, and all other physical sciences were combined into a single pipeline (a physical science pipeline). Finally, the physical science and life science pipelines were combined to create a single science pipeline. The final pipeline has seven levels; however, for the Special Analysis, two of these levels were combined into one category (low academic level).

## No Science

No science includes graduates who did not complete any courses in science or who completed only basic or remedial-level science. It is possible for a graduate to have taken one or more courses in science but to be placed in the no science level.

## Low Academic Level

The low academic level is composed of two levels, each of which is considered to be more academically challenging than no science.

## Primary Physical Science

Highest completed course is in basic physical sciences: applied physical science; earth science; college preparatory earth science; or unified science.

## Secondary Physical Science and Basic Biology

Highest completed course is astronomy; geology; environmental science; oceanography; general physics; basic biology I; or consumer or introductory chemistry.

## General Biology

Highest completed course is general biology I; secondary life sciences (including ecology, zoology, marine biology, and human physiology); or general or honors biology II.

## Chemistry I or Physics I

Highest completed course is introductory chemistry, chemistry I, organic chemistry, physical chemistry, consumer chemistry, general physics, or physics I.

# Note 12: Measuring High School Coursetaking 

Continued

## Chemistry I and Physics I

Highest completed courses include one level I chemistry course (see above) and one level I physics course (see above).

## Chemistry II or Physics II or Advanced Biology

Highest completed course is advanced biology, International Baccalaureate (IB) biology II, IB biology III, AP biology, field biology, genetics, biopsychology, biology seminar, biochemistry and biophysics, biochemistry, botany, cell and molecular biology, cell biology, microbiology, anatomy, and miscellaneous specialized areas of life sciences, chemistry II, IB chemistry II, IB chemistry III, AP chemistry, physics II, IB physics, AP physics B, AP physics C: mechanics, AP physics C: electricity/magnetism, or physics II without calculus.

## English Pipeline

English language and literature courses do not fit neatly into an ordered hierarchical framework. Instead of building on previously studied content, the English curriculum is stratified by the level of academic challenge and intensity of work required within a specific content area rather than among different courses. For example, within the general English curriculum, most schools have three tracks that vary by level of academic challenge: below-gradelevel or low academic-level courses, at-grade or regular courses, and above-grade or honors courses. Thus, unlike the mathematics and science pipelines that are based on progress within a content continuum (e.g., algebra I, geometry, algebra II, trigonometry, and calculus), the English pipeline is constructed to reflect the proportion of coursework completed by graduates in each track. It reflects the quality of a graduate's English coursetaking rather than the progression from low-level to more challenging coursework. The English pipeline has seven categories; however, for the Special Analysis, two of these levels were combined into one category (low academic level).

## No English

No courses classified as English were ever completed by the graduate. It is possible for a graduate to have taken one or more unclassified English courses and be placed in the no English level. For the most part, these unclassified courses were English coursework for blind and deaf students or English as a Second Language courses.

## Low Academic Level

The low academic level is divided into two sublevels, the second of which is considered to be more academically challenging than the first.

## 50 Percent or More Low Academic-Level English

The number of completed courses classified as low academic level, when divided by the total number of completed low academic-, regular-, and honors-level courses, yields a percentage between 50 and 100 .

## Some, but Less than 50 Percent Low Aca-

 demic-Level CoursesThe number of completed courses classified as low academic level, when divided by the total number of completed low academic-, regular-, and honors-level courses, yields a percentage less than 50 . It is possible for a graduate to have also completed less than 50 percent honors-level courses and be classified under this category if the percentage of low academic-level courses completed was equal to or greater than the percentage of honors-level courses completed.

## Regular

All completed English courses classified at grade level; no low academic-level or honorslevel courses.

## Advanced Academic Level

The advanced academic level is divided into three sublevels.

# Note 12: Measuring High School Coursetaking 

Continued

#### Abstract

Some, but Less than 50 Percent Honors-Level Courses The number of completed courses classified as honors level, when divided by the total number of completed low academic-, regular-, and honors-level courses, yields a percentage less than 50 . It is possible for a graduate to have also completed less than 50 percent low academic-level courses and be classified under this category if the percentage of low academic-level courses completed was less than the percentage of honors-level courses completed.

50 Percent or More, but Less than 75 Percent Honors-Level Courses
The number of completed courses classified as honors level, when divided by the total number of completed low academic-, regu-lar-, and honors-level courses, yields a percentage of 50 or greater and less than 75 .

## 75 Percent or More Honors-Level Courses

The number of completed courses classified as honors level, when divided by the total number of completed low academic-, regular-, and honors-level courses, yields a percentage between 75 and 100 .

## Foreign Language Pipeline

Coursework in a foreign language follows an ordered, sequential path. Most high school students who study a foreign language progress along such a path, which is typically a sequence of four year-long courses in the language. Not all students do this, however. Some students begin their studies in the middle of a sequence because they have prior knowledge of the language. Some repeat the same year of study. And a few (about 7 percent of 1988 graduates) study more than one language. The highest level of completed coursework in the foreign language pipeline thus may not indicate the total number of years a graduate has studied a foreign language or languages. The distribution
of graduates among the various levels of foreign language courses was determined by the level of the most academically advanced course those graduates completed.

The foreign language pipeline originally did not classify all foreign language study: before 2004, only courses in French, German, Latin, and Spanish were counted because these were the most commonly offered foreign languages. The next four most commonly offered foreign languages (Italian, Japanese, Hebrew, and Russian) each accounted for less than 1 percent of 1988 graduates who studied foreign languages in the unweighted NELS:88 sample that was used to create the pipeline. Adding these four languages to the four most common languages in the pipeline originally made less than 0.1 percent difference in the percentage of graduates who studied a single language, though it made more difference (yet less than 1 percent difference) in the percentage of graduates who never studied a language and who studied more than one language.

Beginning with 2004 transcript data, the foreign language pipeline expanded its definition of foreign language coursetaking to include any classes in Amharic (Ethiopian), Arabic, Chinese (Cantonese or Mandarin), Czech, Dutch, Finnish, French, German, Greek (Classical or Modern), Hawaiian, Hebrew, Italian, Japanese, Korean, Latin, Norse (Norwegian), Polish, Portuguese, Russian, Spanish, Swahili, Swedish, Turkish, Ukrainian, or Yiddish. Compared with the pre-2004 definition, this expanded definition increased the percentage of students who had completed a foreign language course at year 3 or higher by 1 percent. It decreased the percentage of students classified as having completed no foreign language study by 1.8 percent.

Under both definitions, the foreign language pipeline has six categories. For the Special Analysis, however, two of these levels were combined into one category (year 2 or less).

## Note 12: Measuring High School Coursetaking

## Continued

None
No courses classified as foreign language study were ever completed by graduate. Only courses included in the foreign language pipeline definition are counted as foreign language study (see above), so it is possible for a graduate to have taken one or more courses of some other foreign language and be placed in this category.

Year 1 (1 year of 9th-grade instruction) or less
Graduate completed no more than either a full Carnegie unit (1 academic year of coursework) of 9th-grade (year 1) foreign language instruction or half a Carnegie unit of 10th-grade (year 2 ) foreign language instruction.

## Year 2 (1 year of 10th-grade instruction)

Graduate completed either a full Carnegie unit (1 academic year of coursework) of 10th-grade (year 2) foreign language instruction or half a

Carnegie unit of 11th-grade (year 3) foreign language instruction.

## Year 3 (1 year of 11th-grade instruction)

Graduate completed either a full Carnegie unit (1 academic year of coursework) of 11th-grade (year 3) foreign language instruction or half a Carnegie unit of 12th-grade (year 4) foreign language instruction.

## Year 4 (1 year of 12th-grade instruction)

Graduate completed either a full Carnegie unit (1 academic year of coursework) of 12th-grade (year 1) foreign language instruction or half a Carnegie unit of 13th-grade (year 5) foreign language instruction.

## AP Instruction

Graduate completed an AP foreign language course.

This page intentionally left blank.

Glossary

## Glossary

## A

Achievement levels: Achievement levels, which are set through a National Assessment Governing Board process, define what students should know and be able to do at different levels of performance. In the National Assessment of Educational Progress (NAEP), the achievement levels are Basic, Proficient, and Advanced. The definitions of these levels, which apply across all grades and subject areas, are as follows:

Basic: This level denotes partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at each grade.

Proficient: This level represents solid academic performance for each grade assessed. Students reaching this level have demonstrated competency over challenging subject matter, including subject-matter knowledge, application of such knowledge to real-world situations, and analytical skills appropriate to the subject matter.

Advanced: This level signifies superior performance.

Alternative schools: Alternative schools serve students whose needs cannot be met in a regular, special education, or vocational school. They provide nontraditional education and may serve as an adjunct to a regular school. Although these schools fall outside the categories of regular, special education, and vocational education, they may provide similar services or curriculum. Some examples of alternative schools are schools for potential dropouts; residential treatment centers for substance abuse (if they provide elementary or secondary education); schools for chronic truants; and schools for students with behavioral problems. About 6 percent of schools in the Common Core of Data files are alternative schools.

## B

Bachelor's degree: A degree granted for the successful completion of a baccalaureate program of studies, usually requiring at least 4 years (or the equivalent) of full-time college-level study.

## C

College entrance examination score: Graduates' SAT combined score, derived as either the sum of SAT verbal and math scores or an ACT composite score converted to an estimated SAT combined score.

Combined school: A combined school has one or more of grades $\mathrm{K}-6$ and one or more of grades $9-12$. For example, schools with grades $\mathrm{K}-12,6-9$, or $1-12$ are classified as combined schools.

Constant dollars: Dollar amounts that have been adjusted by means of price and cost indexes to eliminate inflationary factors and allow direct comparison across years.

Consumer price index (CPI): This price index measures the average change in the cost of a fixed-market basket of goods and services purchased by consumers.

Current expenditures: Expenditures for operating local public schools, excluding capital outlay and interest on debt. These expenditures include such items as salaries for school personnel, fixed charges, student transportation, books and materials, and energy costs. Expenditures for state administration are excluded.

## D

Dependent student: (See Financial dependency.)

Diocesan school: A private Catholic school serving students in one or more grades K-12 that is the domain of a bishop.

Doctoral degree: An earned degree carrying the title of Doctor. The Doctor of Philosophy degree (Ph.D.) is the highest academic degree and requires mastery within a field of knowledge and demonstrated ability to perform scholarly research. Other doctor's degrees are awarded for fulfilling specialized requirements in professional fields, such as education (Ed.D.), musical arts (D.M.A.), business administration (D.B.A.), and engineering (D. Eng. or D.E.S.). Many doctor's degrees in both academic and professional fields require an earned master's degree as a prerequisite. First-professional degrees, such as M.D. and D.D.S., are not included under this heading. (See First-professional degree.)

Doctoral institutions: Includes 4-year postsecondary institutions that award at least a doctoral or first-professional degree in one or more programs.

Dropout: The term is used to describe both the event of leaving school before graduating and the status of an individual who is not in school and who is not a graduate. Transferring from a public school to a private school, for example, is not regarded as a dropout event. A person who drops out of school may later return and graduate but is called a "dropout" at the time he or she left school. At the time the person returns to school, he or she is called a "stopout." Measures to describe these often complicated behaviors include the event dropout rate (or the closely related school persistence rate), the status dropout rate, and the high school completion rate. (See Status dropout rate.)

## E

Educational attainment: The highest level of schooling attended and completed.

Elementary school: An elementary/secondary school with one or more grades of K-6 that does not have any grade higher than grade 8 . For example, schools with grades $\mathrm{K}-6,1-3$, or 6-8 are classified as elementary.

Elementary/secondary school: As reported in this publication, elementary/secondary schools include regular schools (i.e., schools that are part of state and local school systems and private elementary/secondary schools, both religiously affiliated and nonsectarian); alternative schools; vocational education schools; and special education schools. Schools not reported here include subcollegiate departments of postsecondary institutions, residential schools for exceptional children, federal schools for American Indians or Alaska Natives, and federal schools on military posts and other federal installations.

Enrollment: The total number of students registered in a given school unit at a given time, generally in the fall of a year.

Expenditures: Charges incurred, whether paid or unpaid, that are presumed to benefit the current fiscal year. For elementary/secondary schools, these include all charges for current outlays plus capital outlays and interest on school debt. For postsecondary institutions, these include current outlays plus capital outlays. For government, these include charges net of recoveries and other correcting transactions, other than retirement of debt, investment in securities, extension of credit, or as agency transactions. Also, government expenditures include only external transactions, such as the provision of prerequisites or other payments in kind. Aggregates for groups of governments exclude intergovernmental transactions among the governments.

Expenditures per pupil: Charges incurred for a particular period of time divided by a student unit of measure, such as enrollment, average

## Glossary

Continued
daily attendance, or average daily membership.

## F

Financial dependency: For purposes of determining eligibility for federal student aid, students are normally considered financially dependent on their parents or guardians (regardless of the amount of support actually provided) unless they meet one of the criteria for independence. A student is considered to be independent if he or she is age 24 or older, a veteran of the U.S. Armed Forces, enrolled in a graduate or professional program beyond a bachelor's degree, married, an orphan or ward of the court, or has legal dependents other than a spouse. Students under 24 who do not meet any of these conditions but are receiving no parental support may be classified as independent by campus financial aid officers using their professional judgment. Most undergraduates under 24 are considered dependent.

First-professional degree: An award that requires completion of a degree program that meets all of the following criteria: (1) completion of the academic requirements to begin practice in the profession; (2) at least 2 years of college work before entering the degree program; and (3) a total of at least 6 academic years of college work to complete the degree program, including previously required college work plus the work required in the professional program itself. First-professional degrees may be awarded in the following 10 fields: chiropractic (D.C. or D.C.M.), osteopathic medicine (D.O.), dentistry (D.D.S. or D.M.D.), pharmacy (Pharm.D.), law (L.L.B. or J.D.), podiatry (D.P.M., D.P., or Pod.D.), medicine (M.D.), theology (M.Div., M.H.L., B.D., or Ordination), optometry (O.D.), and veterinary medicine (D.V.M.).

Four-year institution: Denotes a postsecondary institution that can award a bachelor's degree or higher.

Full-time enrollment: The number of students enrolled in postsecondary education courses with a total credit load equal to at least 75 percent of the normal full-time course load.

Full-time-equivalent (FTE) enrollment: For institutions of higher education, enrollment of full-time students, plus the full-time equivalent of part-time students as reported by institutions. In the absence of an equivalent reported by an institution, the FTE enrollment is estimated by adding one-third of part-time enrollment to full-time enrollment.

Full-time worker: One who is employed for 35 or more hours per week, including paid leave for illness, vacation, and holidays. Hours may be reported either for a survey reference week or for the previous calendar year, in which case they refer to the usual hours worked.

## G

GED certificate: (See High school equivalency certificate.)

GED recipient: A person who has obtained certification of high school equivalency by meeting state requirements and passing an approved exam, which is intended to provide an appraisal of the person's achievement or performance in the broad subject matter areas usually required for high school graduation.

Grade point average (GPA): Student's cumulative undergraduate grade point average (GPA) standardized to a 4.00 -point scale.

Graduate: An individual who has received formal recognition for the successful completion of a prescribed program of studies.

Grants: This term can have one of two possible meanings. In this publication, grants most commonly refer to funds awarded to an individual by a college, an agency, or another institution to attend postsecondary education. Grants, also known as scholarships, do not have to be repaid. Grants may also refer to funds provided by the federal or state government or some other institution to other agencies to support the delivery of services, undertake research or another innovative activity, or to provide other beneficial services.

Gross Domestic Product (GDP): Gross national product less net property income from abroad. Both gross national product (GNP) and gross domestic product (GDP) aggregate only the incomes of residents of a nation, corporate and individual, derived directly from the current production of goods and services by individuals, businesses, and government, gross private domestic investment in infrastructure, and total exports of goods and services. The goods and services included are largely those bought for final use (excluding illegal transactions) in the market economy. A number of inclusions, however, represent imputed values, the most important of which is rental value of owneroccupied housing.

## H

Head Start programs: Head Start is a federally sponsored preschool program primarily for children from low-income families.

High school: A secondary school offering the final years of high school study necessary for graduation, usually including grades 10,11 , 12 (in a 6-3-3 plan) or grades $9,10,11$, and 12 (in a 6-2-4 plan).

High school completion: An individual has completed high school if he or she has been awarded a high school diploma or an equivalent credential, including a General Educational Development (GED) credential.

High school diploma: A formal document regulated by the state certifying the successful completion of a prescribed secondary school program of studies. In some states or communities, high school diplomas are differentiated by type, such as an academic diploma, a general diploma, or a vocational diploma.

High school equivalency certificate: A formal document certifying that an individual has met the state requirements for high school graduation equivalency by obtaining satisfactory scores on an approved examination and meeting other performance requirements (if any) set by a state education agency or other appropriate body. One particular version of this certificate is the GED. The GED (General Educational Development) Test is a comprehensive test used primarily to appraise the educational development of students who have not completed their formal high school education and who may earn a high school equivalency certificate through achieving satisfactory scores. GEDs are awarded by the states or other agencies, and the test is developed and distributed by the GED Testing Service of the American Council on Education.

## I

Independent student: (See Financial dependency.)

Individuals with Disabilities Education Act (IDEA): IDEA is a federal law ensuring services to children with disabilities throughout the nation. IDEA governs how states and public agencies provide early intervention, special education and related services to more than 6.5 million eligible infants, toddlers, children, and youth with disabilities. Infants and toddlers with disabilities (birth-2) and their families receive early intervention services under IDEA Part C. Children and youth (ages 3-21) receive special education and related services under IDEA Part B.

## Glossary

Continued

Industrialized country: A country with a market economy comprising a significant portion of world production and trade markets.

Instructional expenditures (elementary/secondary): Current expenditures for activities directly associated with the interaction between teachers and students. These include teacher salaries and benefits, supplies (such as textbooks), and purchased instructional services.

## L

Language minority students: Students for whom English is not their primary home language and who may or may not be able to speak English very well.

Limited-English-proficient: The term "limited English proficient," when used with respect to an individual, means an individual who is enrolled or preparing to enroll in an elementary school or secondary school, who was not born in the United States or whose native language is a language other than English or who comes from an environment where a language other than English has had a significant impact on the individual's level of English language proficiency; or who is migratory, whose native language is a language other than English, and who comes from an environment where a language other than English is dominant, and whose difficulties in speaking, reading, writing, or understanding the English language may be sufficient to deny the individual the ability to meet the state's proficient level of achievement on state assessments as specified under the No Child Left Behind Act, the ability to successfully achieve in classrooms where the language of instruction is English, or the opportunity to participate fully in society.

Loan: Borrowed money that must be repaid.
Longitudinal dropout rate: The longitudinal dropout rate is the percentage of students in a nationally representative cohort of students
selected at some grade level in school at a certain point in the school year who have left school and not graduated with a diploma or certificate of graduation as of a certain later time. One example of a longitudinal dropout rate is the percentage of high school freshmen enrolled in spring 2002 who dropped out 2 years later as of spring 2004. (See Dropout and Status dropout rate.)

## M

Master's degree: A degree awarded for successful completion of a program generally requiring 1 or 2 years of full-time college-level study beyond the bachelor's degree. One type of master's degree, including the Master of Arts degree, or M.A., and the Master of Science degree, or M.S., is awarded in the liberal arts and sciences for advanced scholarship in a subject field or discipline and demonstrated ability to perform scholarly research. A second type of master's degree is awarded for the completion of a professionally oriented program-for example, an M.Ed. in education, an M.B.A. in business administration, an M.F.A. in fine arts, an M.M. in music, an M.S.W. in social work, and an M.P.A. in public administration. A third type of master's degree is awarded in professional fields for study beyond the firstprofessional degree-for example, the Master of Laws (LL.M.) and Master of Science (M.S.) in various medical specializations.

Mathematics literacy: An individual's capacity to identify and understand the role that mathematics plays in the world, to make wellfounded judgments, and to use and engage with mathematics in ways that meet the needs of that individual's life as a constructive, concerned, and reflective citizen.

Minority: Any individual or racial/ethnic group that is not categorized as White, not Hispanic or Latino.

## N

National School Lunch Program: Established by President Truman in 1946, the program is a federally assisted meal program operated in public and private nonprofit schools and residential child care centers. To be eligible, a student must be from a household with an income at 185 percent of the poverty level for reduced-price lunch or 130 percent of the poverty level for free lunch.

Nonfatal crime: Crimes, whether theft, violent crimes, or serious violent crimes, without fatalities.

Nonresident alien: A person who is not a citizen of the United States and who is in this country on a temporary basis and does not have the right to remain indefinitely.

Nursery school: A separately organized and administered elementary school for groups of children during the year or years preceding kindergarten, which provides educational experiences under the direction of professionally qualified teachers.

## 0

Organization for Economic Cooperation and Development (OECD): The OECD is an organization of 30 nations (as of 2002) whose purpose is to promote trade and economic growth in both member and nonmember nations. OECD's activities cover almost all aspects of economic and social policy. The current member countries include Australia, Austria, Belgium, Canada, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

## P

Parochial school: A private Catholic school serving students in one or more grades K-12 that is the domain of a local church parish.

Part-time enrollment: The number of students enrolled in postsecondary education courses with a total credit load less than 75 percent of the normal full-time credit load.

Postsecondary education: The provision of formal instructional programs with a curriculum designed primarily for students who have completed the requirements for a high school diploma or equivalent. This includes programs with an academic, vocational, and continuing professional education purpose and excludes vocational and adult basic education programs. (See also supplemental note 9.)

Prekindergarten: Public preprimary education for children ages 3-4 (ages 3-5 in some states) who have not yet entered kindergarten. It may offer a program of general education or special education and, in some states, may be part of a collaborative effort with Head Start. Private preprimary educational programs are typically referred to as "center-based programs."

Preschool: A beginning group or class enrolling children younger than 5 years of age and organized to provide educational experiences under professionally qualified teachers in cooperation with parents during the year or years immediately preceding kindergarten (or prior to entry into elementary school when there is no kindergarten).

Private school or institution: A school or institution that is controlled by an individual or agency other than a state, a subdivision of a state, or the federal government; that is usually not supported primarily by public funds; and that is not operated by publicly elected or appointed officials.

## Glossary

Continued

Problem solving: An individual's capacity to use cognitive processes to confront and resolve real, cross-disciplinary situations where the solution is not immediately obvious, and where the literacy domains or curricular areas that might be applicable are not within a single domain of mathematics, science, or reading.

Property tax: The sum of money collected from a tax levied against the value of property.

Public charter school: A public charter school is a publicly funded school that, in accordance with an enabling statute, has been granted a charter exempting it from selected state or local rules and regulations. A public charter school may be a newly created school or it may previously have been a public or private school. In return for funding and autonomy, the charter school must meet accountability standards. A school's charter is reviewed (typically every 3 to 5 years) and can be revoked if guidelines on curriculum and management are not followed or the standards are not met. (See also Public school.)

Public institution: A postsecondary education institution supported primarily by public funds and operated by publicly elected or appointed officials who control the program and activities (See also supplemental note 9.)

Public school: An institution that provides educational services for at least one of grades 1-12 (or comparable ungraded levels), has one or more teachers to give instruction, is located in one or more buildings, receives public funds as primary support, and is operated by an education or chartering agency. Public schools include regular, special education, vocational/technical, alternative, and public charter schools. They also include schools in juvenile detention centers, schools located on military bases and operated by the Department of Defense, and Bureau of Indian Affairs-funded schools operated by local public school districts.

Purchasing power parities: Purchasing power parity (PPP) conversion factors take into account differences in the relative prices of goods and services-particularly nontradables-and therefore provide a better overall measure of the real value of output produced by an economy compared with other economies. PPP gross national income (GNI) is measured in current international dollars, which, in principal, have the same purchasing power as a dollar spent on GNI in the U.S. economy. Because PPPs provide a better measure of the standard of living of residents of an economy, they are the basis for the World Bank's calculations of poverty rates at $\$ 1$ and $\$ 2$ a day. The GNI of developing countries measured in PPP terms generally exceeds their GNI measured using the Atlas method or using market exchange rates.

Purchasing power parity (PPP) indices: Purchasing power parity (PPP) exchange rates, or indices, are the currency exchange rates that equalize the purchasing power of different currencies, meaning that when a given sum of money is converted into different currencies at the PPP exchange rates, it will buy the same basket of goods and services in all countries. PPP indices are the rates of currency conversion that eliminate the difference in price levels among countries. Thus, when expenditures on gross domestic product (GDP) for different countries are converted into a common currency by means of PPP indices, they are expressed at the same set of international prices, so that comparisons among countries reflect only differences in the volume of goods and services purchased.

## R

Religious private school: A school with a designated religious orientation or purpose, which is not supported primarily by public funds. It must provide instruction for one or more of grades K-12 (or comparable ungraded levels)
and have one or more teachers. Organizations or institutions that provide support for homeschooling but do not offer classroom instruction for students are not included.

Revenues from federal sources: Revenues from federal sources include direct grants-in-aid from the federal government; federal grants-inaid through the state or an intermediate agency; and other revenue, in lieu of taxes that would have accrued had the tax base been subject to taxation.

Revenues from local sources: Revenues from local sources include revenues from a local education agency (LEA), including taxes levied or assessed by a LEA; revenues from a local government to the LEA; tuition received; transportation fees; earnings on investments from LEA holdings; net revenues from food services (gross receipts less gross expenditures); net revenues from student activities (gross receipts less gross expenditures); and other revenues (textbook sales, donations, property rentals).

Revenues from state sources: Revenues from state sources include revenues from an agency of state government including those that can be used without restriction, those for categorical purposes, and revenues in lieu of taxation.

## S

Salary: The total amount regularly paid or stipulated to be paid to an individual, before deductions, for personal services rendered while on the payroll of a business or organization.

Secondary school: An elementary/secondary school with one or more of grades 7-12 that does not have any grade lower than grade 7 . For example, schools with grades 9-12, 7-9, $10-12$, or $7-8$ are classified as secondary.

Serious violent crime: Rape, sexual assault, robbery, or aggravated assault.

Socioeconomic status (SES): A measure of an individual or family's relative economic and social ranking. In the analyses in this publication, SES is constructed based on father's education level, mother's education level, father's occupation, mother's occupation, and family income. Also, students are classified into high, middle, and low SES based on a standardized composite index score of their parents' education level, mother's and father's occupation, family's income, and certain household items. The terms "high SES," "middle SES," and "low SES," respectively, refer to the upper, middle two, and lower quartiles of the composite index score distribution. By definition, one-quarter of each cohort of students will be in the bottom SES quartile, even if education levels, average family incomes, and the number of persons in more prestigious occupations change.

Special education schools: Special education schools provide educational services to students with special physical or mental needs, i.e., students with mental disabilities (such as mental retardation or autism), physical disabilities (such as hearing impairments), or learning disabilities (such as dyslexia). About 2 percent of schools in the Common Core of Data files are vocational schools.

Stafford Loan program: The Stafford Loan program is the largest of federal student loans. For students with financial need, the federal government subsidizes the interest while the student is enrolled. Unsubsidized loans are available to students without regard to financial need.

Status dropout rate: The status dropout rate is a cumulative rate that estimates the proportion of young adults who are dropouts, regardless of when they dropped out. The numerator of the status dropout rate for any given year is the number of young adults ages 16-24 who, as of October of that year, had not completed high school and were not currently enrolled.

## Glossary

Continued

The denominator is the total number of 16- to 24 -year-olds in October of that same year.

## T

Title I grant program: The federal government provides grants to local education agencies (LEAs) to supplement state and local education funding based primarily on the number of children from low-income families in each LEA. The program provides extra academic support and learning opportunities to help disadvantaged students catch up with their classmates or make significant academic progress.

Total expenditures per pupil in average daily attendance: Includes all expenditures allocable to per pupil costs divided by average daily attendance. These allocable expenditures include current expenditures for regular school programs, interest on school debt, and capital outlay. Beginning in 1980-81, expenditures for state administration are excluded and expenditures for other programs (summer schools, community colleges, and private schools) are included.

Two-year institution: Denotes a postsecondary institution that does not confer bachelor's degrees, but does provide 2 -year programs that result in a certificate or an associate's degree, or 2-year programs that fulfill part of the requirements for a bachelor's degree or higher at a 4-year institution.

## U

Undergraduate students: Students registered at a postsecondary institution in a program leading to a baccalaureate degree or other formal award below the baccalaureate such as an associate's degree.

University: A postsecondary institution that consists of a liberal arts college, a diverse graduate program, and usually two or more professional schools or faculties and that is
empowered to confer degrees in various fields of study.

Unsubsidized loans: (See Stafford Loan program.)

## V

Violent crime: Rape, sexual assault, robbery, aggravated assault, or simple assault.

Vocational education schools: Vocational schools primarily serve students who are being trained for semi-skilled or technical occupations. They may be part of a regular district (along with academic schools) or in a vocational district (serving more than one academic school district). About 1 percent of schools in the Common Core of Data files are vocational schools.

## W

World Bank Atlas method: In calculating gross national income (GNI-formerly referred to as gross national product) and GNI per capita in U.S. dollars for certain operational purposes, the World Bank uses the Atlas conversion factor. The purpose of the Atlas conversion factor is to reduce the impact of exchange rate fluctuations in the cross-country comparison of national incomes.

The Atlas conversion factor for any year is the average of a country's exchange rate (or alternative conversion factor) for that year and its exchange rates for the two preceding years, adjusted for the difference between the rate of inflation in the country, and through 2000, the rate of inflation in the G-5 countries (France, Germany, Japan, the United Kingdom, and the United States). For 2001 onwards, these countries include the Euro Zone, Japan, the United Kingdom, and the United States. A country's inflation rate is measured by the change in its gross domestic product (GDP) deflator.

## Glossary

Continued

The inflation rate for G-5 countries (through 2000, and the Euro Zone, Japan, the United Kingdom, and the United States for 2001 onwards), representing international inflation, is measured by the change in the SDR deflator. (Special drawing rights, or SDRs, are the IMF's unit of account.) The SDR deflator is calculated as a weighted average of the G-5 countries' (through 2000, and the Euro Zone, Japan, the United Kingdom, and the United States for 2001 onwards) GDP deflators in SDR terms,
the weights being the amount of each country's currency in one SDR unit. Weights vary over time because both the composition of the SDR and the relative exchange rates for each currency change. The SDR deflator is calculated in SDR terms first and then converted to U.S. dollars using the SDR to dollar Atlas conversion factor. The Atlas conversion factor is then applied to a country's GNI. The resulting GNI in U.S. dollars is divided by the midyear population to derive GNI per capita.

annual earnings of, 2004:14
not in school or working, 2004:13, 2006:21, 2007:19

[^0]:    See notes at end of table.

[^1]:    \# Rounds to zero.
    NOTE: Dual-credit courses allow students to earn both high school and postsecondary credits for a single course. AP courses and their end-of-course examinations are developed and administered by The College Board and allow students to earn postsecondary credit. IB courses are defined as courses that make up a 2 -year liberal arts curriculum that leads to an IB diploma.
    SOURCE:U.S. Department of Education, National Center for Education Statistics, Fast Response Survey System (FRSS),"Dual Credit and Exam-based Courses,"FRSS 85, 2003.

[^2]:    ${ }^{1}$ Includes nonoccupational vocational education, vocational general introduction, agriculture, business, marketing, health, occupational home economics, trade and industry, and technical courses.
    NOTE:The Carnegie unit is a standard of measurement that represents 1.0 credit for the completion of a 1-year course.Data differ slightly from figures appearing in other NCES reports because of differences in taxonomies and case exclusion criteria
    SOURCE: U.S. Department of Education, National Center for Education Statistics, High School and Beyond Longitudinal Study of 1980 Sophomores, "First Follow-up" (HS\&B-So:80/82); and Education Longitudinal Study of 2002 (ELS:2002/04),"High School Transcript Study."

[^3]:    ${ }^{1}$ Beginning in 1994, new procedures were used to collect preprimary enrollment data. As such, numbers from before 1994 may not be comparable to those from 1994 or later.
    NOTE:Detail may not sum to totals because of rounding. Includes enrollment in any type of public or private nursery school, kindergarten, elementary school, high school, college, university, or professional school. Attendance may be on either a full-time or part-time basis and during the day or night. Excludes homeschooled students and enrollment in less-than-2-year postsecondary institutions. See supplemental note 2 for more information on the Current Population Survey (CPS).
    SOURCE:U.S. Department of Education, National Center for Education Statistics.Digest of Education Statistics, 2006 (NCES 2007-017), table 7, data from U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October Supplement, 1970-2005.

[^4]:    ${ }^{1}$ Grades $\mathrm{K}-8$ and $9-12$ do not include ungraded students; therefore, these two categories do not sum to grades $\mathrm{K}-12$.
    NOTE:Detail may not sum to totals because of rounding. Calculations were revised and estimates may differ from previously published data.Supplemental note 1 identifies the states in each region.
    SOURCE:U.S.Department of Education, National Center for Education Statistics, Private School Universe Survey (PSS), and Common Core of Data (CCD),"State Nonfiscal Survey of Public Elementary/Secondary Education,"various years, 1989-90 through 2003-04.

[^5]:    ${ }^{1}$ Race categories exclude persons of Hispanic ethnicity
    ${ }^{2}$ Other religious schools have a religious orientation or purpose, but are not Roman Catholic. Conservative Christian schools are those with membership in at least one of four associations-Accelerated Christian Education, American Association of Christian Schools, Association of Christian Schools International, or Oral Roberts University Education Fellowship. Affliated schools are those with membership in one of 12 associations-Association of Christian Teachers and Schools,Christian Schools International, Council of Islamic Schools in North America, Evangelical Lutheran Education Association,Friends Council on Education, General Conference of the Seventh-Day Adventist Church, Islamic School League of America,National Association of Episcopal Schools,National Christian School Association, National Society for Hebrew Day Schools, Solomon Schechter Day Schools, Southern Baptist Association of Christian Schools—or indicating membership in "other religious school associations." Unaffiliated schools are those that have a religious orientation or purpose, but are not classified as Conservative Christian or affiliated.
    ${ }^{3}$ Nonsectarian schools do not have a religious orientation or purpose.
    NOTE:Detail may not sum to totals because of rounding.
    SOURCE:U.S. Department of Education, National Center for Education Statistics, Private School Universe Survey (PSS), 2003-04.

[^6]:    See notes at end of table.

[^7]:    ${ }^{1}$ Projections based on data through 2005 and middle alternative assumptions concerning the economy. See NCES 2007-038 for more information on projections.
    NOTE:Detail may not sum to totals because of rounding. See supplemental note 3 for more information on the Integrated Postsecondary Education Data System (IPEDS). See supplemental note 9 for more information about classification of postsecondary education institutions.
    SOURCE:U.S. Department of Education, National Center for Education Statistics (NCES). Digest of Education Statistics, 2006 (NCES 2007-017), tables 176 and 185 , and Hussar, W. (forthcoming). Projections of Education Statistics to 2016 (NCES 2007-038), tables 16, 18, and 19; data from U.S. Department of Education, NCES, 1970-1985 Higher Education General Information Survey (HEGIS)""Fall Enrollment in Colleges and Universities" surveys; and 1986-2005 Integrated Postsecondary Education Data System,"Fall Enrollment Survey" (IPEDS-EF:86-99), and Spring 2001 through Spring 2006.

[^8]:    ${ }^{1}$ Projections based on reported data through 2005 and middle alternative assumptions concerning the economy. See NCES 2007-038 for more information on projections.
    NOTE:Detail may not sum to totals because of rounding. See supplemental note 3 for more information on the Integrated Postsecondary Education Data System (IPEDS). See the glossary for a definition of first-professional degree. SOURCE:U.S. Department of Education, National Center for Education Statistics (NCES). Digest of Education Statistics, 2006 (NCES 2007-017), tables 191 and 192, and Hussar, W. (2006). Projections of Education Statistics to 2016 (NCES 2007-038), tables 20 and 21; data from U.S. Department of Education, NCES, 1976-85 Higher Education General Information Survey (HEGIS),"Fall Enrollment in Colleges and Universities" surveys; and 1986-2006 Integrated Postsecondary Education Data System,"Fall Enrollment Survey" (IPEDS-EF:87-99), and Spring 2001 through Spring 2006.

[^9]:    ${ }^{1}$ Race categories exclude persons of Hispanic ethnicity.
    NOTE:The 2005 National Assessment of Educational Progress (NAEP) introduced a new mathematics assessment for 12th-grade students. As a result, the 2005 12th-grade assessment results cannot be compared with those from previous assessments. Reported on a $0-300$ scale in 2005, the average mathematics score of 12 th-graders was set at 150 . See supplemental note 4 for more information on NAEP.
    SOURCE: Grigg, W., Donahue, P., and Dion, G. (2007). The Nation's Report Card: 12th-Grade Reading and Mathematics 2005 (NCES 2007-468), data from U.S. Department of Education, National Center for Education Statistics, NAEP Data Explorer.

[^10]:    * Significantly different from 2005 ( $p<.05$ )
    ${ }^{1}$ A score location at or below which a specified percentage of the population falls. In 1996, for example, 10 percent of the 4th-graders scored at or below 99 , while 90 percent of 4th-graders scored above 99 .
    NOTE: At the state level, the National Assessment of Educational Progess (NAEP) includes only students in public schools, while national results in this indicator include both public and private school students. Variations or changes in exclusion rates for students with disabilities and limited-English-proficient students in the NAEP samples may affect comparative performance results. See supplemental note 4 for more information on testing accommodations and NAEP.
    SOURCE:U.S. Department of Education, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1996, 2000, and 2005 Science Assessments, NAEP Data Explorer.

[^11]:    See notes at end of table.

[^12]:    ${ }^{1}$ Total includes other race/ethnicity categories not separately shown.
    ${ }^{2}$ Race categories exclude persons of Hispanic ethnicity. Beginning in 2003, respondents were able to identify as being more than one race.From 2003 onwards, the Black and White categories include individuals who considered themselves to be of only one race.
    NOTE:The status dropout rate is the percentage of 16 - through 24 -year-olds who are not enrolled in high school and who lack a high school credential. A high school credential includes a high school diploma or equivalent credential such as a General Educational Development (GED) certificate. Estimates beginning in 1987 reflect new editing procedures for cases with missing data on school enroll ment items. Estimates beginning in 1992 reflect new wording of the educational attainment item. Estimates beginning in 1994 reflect changes due to newly instituted computer-assisted interviewing. See supplemental note 7 for more information.
    SOURCE:U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October Supplement, 1972-2005.

[^13]:    See notes at end of table.

[^14]:    See notes at end of table.

[^15]:    ${ }^{1}$ Does not distinguish between full- and part-time status of staff.
    ${ }^{2}$ The average number of students per staff is based on student enrollment in schools with such staff and the total number of full- and part-time staff. This measure differs from pupil/teacher ratios that are based on the total number of full-time-equivalent teachers. Student enrollment data used to calculate this ratio are for schools with such staff.
    ${ }^{3}$ This measure is intended to reveal how many schools have access to staff; it does not distinguish between the full- and part-time status of such staff.
    NOTE:Regular public schools do not include alternative, special education, special program emphasis, or vocational/technical schools. Data for combined elementary and secondary schools and for ungraded schools are excluded.
    Detail may not sum to totals because of rounding.
    SOURCE:U.S. Department of Education, National Center for Education Statistics (NCES), Schools and Staffing Survey (SASS),"Public School Data File," 2003-04.

[^16]:    ${ }^{1}$ Does not distinguish between full- and part-time status of staff.
    ${ }^{2}$ The average number of students per staff is based on student enrollment in schools with such staff and the total number of full- and part-time staff. This measure differs from pupil/teacher ratios that are based on the total number of full-time-equivalent teachers. Student enrollment data used to calculate this ratio are for schools with such staff.
    ${ }^{3}$ This measure is intended to reveal how many schools have access to staff;it does not distinguish between the full- and part-time status of such staff.
    NOTE:Regular public schools do not include alternative, special education, special program emphasis, or vocational/technical schools. High-poverty schools are those where at least 75 percent of students are approved for free or reduced-price lunches; low-poverty schools are those where less than 15 percent of students are approved for free or reduced-price lunches. Data for combined elementary and secondary schools and for ungraded schools are excluded. Detail may not sum to totals because of rounding.
    SOURCE:U.S.Department of Education, National Center for Education Statistics (NCES), Schools and Staffing Survey (SASS),"Public School Data File," 2003-04.

[^17]:    ${ }^{\prime}$ 'Excludes those who were employed but not at work during the survey week; therefore, detail may not sum to total percentage employed. Hours worked per week refers to the number of hours the respondent worked at all jobs during the survey week.
    ${ }^{2}$ Includes those who were employed but not at work during the survey week.
    NOTE:COllege includes both 2 - and 4 -year institutions. College students were classified as attending full time if they were taking at least 12 hours of classes (or at least 9 hours of graduate classes) during an average school
    week and were classified as part time if they were taking fewer hours.
    SOURCE:U.S. Department of Commerce, Census Bureau, Current Population Survey (CPS), October Supplement, 1970-2005.

[^18]:    ! Interpret data with caution (estimates are unstable).
    ${ }^{1}$ Total price (also known as the student budget) includes tuition and fees, books and materials, and living expenses.
    ${ }^{2}$ Ph.D. in education, Ed.D., or any other doctoral degree in which education is the field of study.
    ${ }^{3}$ Examples include D.B.A. (Doctor of Business Administration), D.F.A. (Doctor of Fine Arts), and D.P.A. (Doctor of Public Administration),
    NOTE:Table is limited to students who attended for the full year at only one institution in 2003-04 to keep aid and price data consistent. Full-time means enrolled full time (according to the institution's definition) for at least 9 months during the 2003-04 academic year;ffull-time enrollment does not preclude working as well. Detail may not sum to totals because of rounding.
