Acting Commissioner
The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high-priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high-quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public. Unless specifically noted, all information contained herein is in the public domain.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to

## Acknowledgments

The collection and publication of a census of this magnitude has been a team effort. It would not have been accomplished without the support of the following individuals and organizations: the local public librarians who provided the data; the Federal-State Cooperative System (FSCS) State Data Coordinators; the Chief Officers of State Library Agencies (COSLA); the American Library Association (ALA); the National Commission on Libraries and Information Science (NCLIS); and the Institute of Museum and Library Services (IMLS).

This report was reviewed by Kevin Bromer, Sally Dillow, Rachel Dinkes, Lauren Gilbertson, and Thomas Nachazel, Education Statistics Services Institute (ESSI); Lynn Okagaki and Duc-Le To, Institute of Education Sciences (IES); and Wilma Greene, Marilyn McMillen Seastrom, Cicely Sharpe, John Sietsema, and Bruce Taylor, NCES. Their comments toward the improvement of the report are gratefully acknowledged.

The authors also extend their thanks to the FSCS Steering Committee members who led the effort during the time frame these data were collected and processed.

C2 Items on the Public Libraries Survey with response rates below 85 percent at the national level: Fiscal year 2003 ..... C-5

## Introduction

## Survey Purpose and Data Items Included in This Report

The Public Libraries Survey (PLS) provides a national census of public libraries and their public service outlets. These data are useful to federal, state, and local policymakers; library and public policy researchers; and the public, journalists, and others.

This report provides summary information about public libraries in the 50 states and the District of Columbia for state fiscal year (FY) 2003. It covers service measures such as access to the Internet, number of users of electronic resources, number of Internet terminals used by the general public, reference transactions, public service hours, interlibrary loans, circulation, library visits, children's program attendance, and circulation of children's materials. It also includes information about size of collection, staffing, operating revenue and expenditures, type of geographic service area, type of legal basis, type of administrative structure, number and type of public library service outlets, and square footage of outlets. This report is based on the final data file.

The PLS is a universe survey. A total of 8,955 of the 9,214 public libraries responded to the FY 2003 survey ( 8,952 public libraries in the 50 states and the District of Columbia and 3 public libraries in the outlying areas of Guam, Northern Mariana Islands, and the U.S. Virgin Islands), for a unit response rate of 97.2 percent. Item response rates are included in the tables in this report. The FY 2003 survey is the 16th in the series. ${ }^{1}$ The data were submitted using customized personal computer survey software furnished by NCES. (See "Data Collection" in appendix C for more information.)

## Organization of This Report

This report includes the following major sections:

- Introduction
- Survey Purpose and Data Items Included in This Report
- Key Library Terminology
- Types of Tables Included in This Report
- Calculations Included in the Tables
- Caveats for Using the Data
- Data Items Collected but Omitted From This Report
- History of the Public Libraries Survey and Cooperative Data Collection Today
- Findings from the FY 2003 data collection
- Tables (including 11 state ranking tables in appendix A)
- Technical Notes (appendix C)
- Glossary (appendix D)
- Survey Instrument (appendix E)

## Key Library Terminology

- Public library. A public library is an entity that is established under state enabling laws or regulations to serve a community, district, or region, and that provides at least the following: (1) an organized collection of printed or other library materials, or a combination thereof; (2) paid staff; (3) an established schedule in which services of the staff are available to the public; (4) the facilities

[^0]necessary to support such a collection, staff, and schedule; and (5) that is supported in whole or in part with public funds. (Note: In this report, the term public library means an administrative entity.)

- Administrative entity. An administrative entity is the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single public library service outlet, or it may have more than one public library service outlet. The types of administrative structures for public libraries are reported in table 2.
- Public library service outlet. Public libraries can have one or more outlets that provide direct service to the public. The three types of public library service outlets included in this report are central library outlets, branch library outlets, and bookmobile outlets. Information on a fourth type of outlet, books-by-mail-only outlets, was collected but omitted from this report. See appendix D for definitions of these terms. Table 3 reports data concerning public library service outlets.

## Types of Tables Included in This Report

There are 66 tables in this report: Tables 1 through 1B provide overview data, by state, about the number of public libraries and population of legal service area. Tables 2 through 25 are in sets of 2 each. The base table in each set (tables 2 through 25) displays data for the nation as a whole and for each of the 50 states, the District of Columbia, and 3 outlying areas (Guam, Northern Mariana Islands, and the U.S. Virgin Islands, whose data are not included in the table totals). The "A" table in each set displays the same data by 11 ranges of population of legal service area. Tables 26 and 27 include data about square footage. Appendix $A$ includes 11 tables of state rankings.

## Calculations Included in the Tables

Percentages rather than raw numbers are used in many of the tables to provide a clearer picture of data patterns. Percentage distributions may not sum to 100 due to rounding. To obtain a raw number from a percentage distribution table, multiply the percentage for the item by the total for the item (the total may be in a different table). For example, in table 12, the number of public libraries in the 50 states and the District of Columbia with fewer than 5,000 print materials is 332 ( $9,211 \times .036$ ). The percentages are rounded, so multiplying a percentage by a total may not give an exact count for a desired category. Selected tables include per capita values for some items and per 1,000 population, per 5,000 population, or per 25,000 population values for others (e.g., table 8 ). Scales (per capita, per 1,000 , etc.) were selected to provide the clearest display of differences across categories in the data.

## Caveats for Using the Data

The data include imputations, at the unit and item levels, for nonresponding libraries. (See "Survey Reponse" and "Imputations" in appendix C for more information.) Comparisons to data prior to FY 92 should be made with caution, as earlier data do not include imputations for nonresponse, and the percentage of libraries responding to a given item varied widely among states.

State data comparisons should be made with caution because of differences in state fiscal year reporting periods (see "Reporting Period" in appendix C) and adherence to survey definitions. ${ }^{2}$ The District of Columbia, while not a state, is included in this report. Special care should be used in comparing its data to state data. Caution should also be used in making comparisons with the state of Hawaii, as Hawaii reports only one public library for the entire state. See the section on "Imputation" in appendix C for a discussion of the imputation methodology.

[^1]
## Data Items Collected but Omitted From This Report

The items listed below are not included in this report but are on the data file. (Note: The data in the report are nationwide and state-level data. The data below were reported at the outlet level, were the kind of data that could not be aggregated, such as a web address, or were data for which the response rate was too low to report):

- Information on public library service outlets, including the location of public library service outlets with respect to a metropolitan area, number of books-by-mail-only outlets, and number of bookmobiles by bookmobile outlet.
- Web address of the public library.
- Identifying information about individual public libraries and their outlets, such as address and telephone number, and legal service area boundary change.
- The public library's status as a Federal State Cooperative System (FSCS) public library. (The survey includes the question, "Does this public library meet all the criteria of the FSCS public library definition?")
- Capital revenue, current electronic serial subscriptions, print materials expenditures, other materials expenditures, number of data bases, number of electronic books.

## History of the Public Libraries Survey and Cooperative Data Collection Today

## History of the Public Libraries Survey

In 1985, the National Center for Education Statistics (NCES) and the American Library Association (ALA) conducted a pilot project in 15 states to assess the feasibility of a federal-state cooperative program for the collection of public library data. The project was jointly funded by NCES and the U.S. Department of Education's former Library Programs (LP) office. In 1987, the project's final report recommended the development of a nationwide data collection system. The Hawkins-Stafford Elementary and Secondary School Improvement Amendments of 1988 (P.L. 100-297) charged NCES with developing a voluntary FSCS for the annual collection of public library data. ${ }^{3}$ To carry out this mandate, a task force was formed by NCES and the National Commission on Libraries and Information Science (NCLIS), and the FSCS was established in 1988.

The first E.D. TAB report in this series, Public Libraries in 50 States and the District of Columbia: 1989, which included data from 8,699 public libraries in 50 states and the District of Columbia, was released by NCES in 1991. A data file and survey report have been released annually since then. The states have always submitted their data electronically, via customized personal computer survey software furnished by NCES.

## Cooperative Data Collection Today

The 1988 NCES-NCLIS task force evolved into the FSCS Steering Committee as we know it today. This committee is integral to the design and conduct of the survey. Its membership includes State Data Coordinators (SDCs) and representatives of the Chief Officers of State Library Agencies (COSLA), NCLIS, ALA, the Institute of Museum and Library Services (IMLS), the U.S. Census Bureau (the data collection agent), and NCES.

Data are collected through the PLS, conducted annually by NCES through the FSCS for Public Library Data. FSCS is a cooperative system through which states and the outlying areas submit data for each of 9,000 public libraries to NCES on a voluntary basis. At the state level, FSCS is administered by SDCs appointed by

[^2]the State Librarian. The SDC collects the requested data from public libraries and submits these data to NCES. NCES aggregates the data to provide the state and national totals presented in this report.

## Findings

## Number of Public Libraries and Population of Legal Service Area

- There were $9,211^{4}$ public libraries (administrative entities) ${ }^{5}$ in the 50 states and the District of Columbia in fiscal year (FY) 2003 (table 1).
- Public libraries served 97 percent $^{6}$ of the total population of the states and the District of Columbia, either in legally established geographic service areas or in areas under contract.
- Eleven percent of the public libraries served 72 percent of the population of legally served areas in the United States; each of these public libraries had a legal service area population of 50,000 or more (derived from tables 1 A and 1 B ). ${ }^{7}$

## Service Outlets

- In FY 2003, 81 percent of public libraries had one single direct-service outlet (an outlet that provides service directly to the public) (table 2). Nineteen percent had more than one direct-service outlet. Types of direct-service outlets include central library outlets, branch library outlets, and bookmobile outlets.
- A total of 1,547 public libraries ( 17 percent) had one or more branch library outlets, with a total of 7,479 branch outlets (table 3). The total number of central library outlets was 9,062 . The total number of stationary outlets (central library outlets and branch library outlets) was 16,541. Eight percent of public libraries had one or more bookmobile outlets, with a total of 864 bookmobiles.
- Eleven percent of public libraries had an average number of weekly public service hours per outlet of less than 20 hours, 38 percent had weekly public service hours per outlet of $20-39$ hours, and 51 percent had weekly public service hours per outlet of 40 hours or more (table 4).

## Legal Basis and Interlibrary Relationships

- In FY 2003, 53 percent of public libraries were part of a municipal government, 10 percent were part of a county/parish, 15 percent were nonprofit association libraries or agency libraries, 14 percent were separate government units known as library districts, 3 percent had multijurisdictional legal basis under an intergovernmental agreement, 2 percent were part of a school district, 1 percent were part of a city/county, and 1 percent reported their legal basis as "other" (table 5). ${ }^{8}$
- Seventy-six percent of public libraries were members of a federation or cooperative service, while 23 percent were not. One percent served as the headquarters of a federation, or cooperative service (table 7). ${ }^{9}$

[^3]
## Library Services

## Total Circulation, Interlibrary Loans, Reference Transactions, and Library Visits

- Total nationwide circulation of public library materials was 2 billion, or 7 materials circulated per capita. Among the 50 states and the District of Columbia, the highest circulation per capita was 14.7, and the lowest was 2.1 (table 8).
- Nationwide, 26.7 million library materials were loaned by public libraries to other libraries (table 8).
- Nationwide, reference transactions in public libraries totaled 302.3 million, or 1.1 reference transactions per capita (table 8).
- Nationwide, library visits to public libraries totaled 1.3 billion, or 4.6 library visits per capita (table 8 ).

## Children's Services

- Nationwide, circulation of children's materials was 699.9 million, or 36 percent of total circulation, in FY 2003. Attendance at children's programs was 53.2 million (table 9).

## Internet Access and Electronic Services

- Nationwide, uses of electronic resources per year totaled 331.9 million, or 1.2 uses of electronic resources per capita (table 10). ${ }^{10}$
- Internet terminals available for public use in public libraries nationwide numbered 157 thousand, or 2.8 per 5,000 population. The average number of Internet terminals available for public use per stationary outlet was 9.5 (table 10). ${ }^{11}$
- Ninety-nine percent ${ }^{12}$ of the unduplicated population of legal service areas had access to the Internet through their local public library.

## Collections

- Nationwide, public libraries had 802 million print materials in their collections, or 2.9 volumes per capita, in FY 2003. By state, the number of print materials per capita ranged from 1.7 to 5.2 (table 11).
- Public libraries nationwide had 37.4 million audio materials and 32.6 million video materials in their collections (table 11).

## Staff

- Public libraries had a total of 136 thousand paid full-time-equivalent (FTE) staff in FY 2003, or 12.1 paid FTE staff per 25,000 population (tables 13 and A6). Of the total FTE staff, 22 percent, or 2.7 per

[^4]25,000 population, had master's degrees from programs of library and information studies accredited by the American Library Association ("ALA-MLS" degrees); 11 percent were librarians by title but did not have the ALA-MLS degree; and 67 percent were in other positions (tables 13 and A7). ${ }^{13}$

- Forty-five percent of all public libraries, or 4,182 libraries, had librarians with "ALA-MLS" degrees (table 13).

## Operating Revenue and Expenditures

## Operating Revenue

- In FY 2003, 80 percent of public libraries' total operating revenue of about $\$ 8.7$ billion came from local sources, 11 percent from state sources, 1 percent from federal sources, and 9 percent from other sources, such as monetary gifts and donations, interest, library fines, fees, or grants (table 15).
- Nationwide, the average total per capita ${ }^{14}$ operating revenue for public libraries was $\$ 31.18$ (table 16 ). Of that, $\$ 24.93$ was from local sources, $\$ 3.39$ from state sources, $\$ 0.17$ from federal sources, and $\$ 2.68$ from other sources.
- Per capita operating revenue from local sources was under $\$ 3.00$ for 8 percent of public libraries, $\$ 3.00$ to $\$ 14.99$ for 33 percent of libraries, $\$ 15.00$ to $\$ 29.99$ for 33 percent of libraries, and $\$ 30.00$ or more for 26 percent of libraries (table 17). ${ }^{15}$

## Operating Expenditures

- Total operating expenditures for public libraries were $\$ 8.3$ billion in FY 2003 (table 18). Of this, 66 percent was expended for paid staff and 14 percent for the library collection.
- Twenty-nine percent of public libraries had operating expenditures of less than \$50,000, 41 percent expended $\$ 50,000$ to $\$ 399,999$, and 30 percent expended $\$ 400,000$ or more (derived from table 21 ).
- $\quad$ Nationwide, the average per capita operating expenditure for public libraries was $\$ 29.60$ (table 19). By state, the highest average per capita operating expenditure was $\$ 53.94$, and the lowest was $\$ 13.09$.
- Expenditures for library collection materials in electronic format ${ }^{16}$ were 1 percent of total operating expenditures for public libraries (table 20).

## How to Obtain Print and Electronic Products

Under its library surveys, NCES regularly publishes E.D. TABs, which consist of tables, usually presenting state and national totals, a survey description, and data highlights. NCES also publishes separate, more indepth studies analyzing these data.

## Internet Access

Many NCES publications (including out-of-print publications) and edited raw data files from the library surveys are available for viewing or downloading at no charge through the electronic catalog on the NCES website at http://nces.ed.gov/pubsearch/.

## Ordering Print Products

Many NCES publications are also available in printed format. To order one free copy of this and other recent NCES reports, contact the Education Publications Center (ED Pubs) at http://www.edpubs.org.

E-mail: customerservice@edpubs.org
Toll-free phone: 1-877-4ED-PUBS (877-433-7827)
TTY/TDD: 1-877-576-7734
Fax: 1-301-470-1244
Mail: ED Pubs, P.O. Box 1398, Jessup, MD 20794-1398
If you need more than one copy of a publication or if ED Pubs supplies have been exhausted, more recent publications may be purchased from the Government Printing Office, Superintendent of Documents (GPO). Contact GPO Access (U.S. Government Online Bookstore) at http://bookstore.gpo.gov/.

Many of the publications listed are available through the Educational Resources Information Clearinghouse (ERIC) system. For further information on services and products, you may visit the EDRS website at http://www.eric.ed.gov.

Out-of-print publications and data files may be available through the NCES Electronic Catalog on NCES's website at http://nces.ed.gov/pubsearch/ or through one of the 1,400 federal depository libraries throughout the United States at http://www.gpoaccess.gov/libraries.html. Use the NCES publication numbers included in the citations for publications and data files to quickly locate items in the NCES Electronic Catalog. Use the GPO number to locate items in federal depository libraries.

${ }^{1}$ A public library is an administrative entity, the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single public library service outlet, or it may have more than one public library service outlet. The types of administrative structures for public libraries are reported in table 2. See table 3 for additional information on outlets.
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: A state's total population of legal service area may be more than the unduplicated population of legal service area and the official state population estimate because some public libraries have overlapping service areas. (See glossary in appendix D for definitions of these terms.) Detail may not sum to totals because of rounding. Response rate for population of legal service area is the percentage of libraries that reported the item. The other population items are single state-reported figures. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

$\dagger$ Not applicable.
${ }^{1}$ The number of people in the geographic area for which a public library has been established to offer services and from which (or on behalf of which) the library derives revenue, plus any areas served under contract for which the library is the primary service provider. (See table 1.)
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is the percentage of libraries that reported population of legal service area. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico

${ }^{1}$ The types of administrative structure are defined in the glossary in appendix D.
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is the percentage of libraries that reported administrative structure. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

[^6]${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
${ }^{3}$ Of the 9,211 public libraries in the 50 States and DC, 7,430 were single-outlet libraries and 1,781 were multiple-outlee libraries. Some single-outlet libraries are bookmobiles or books-by-mail only outlets. Multiple-outlet libraries may consist of branches only, bookmobiles only, or branches and bookmobiles only.
NOTE: Response rate is the percentage of libraries that reported the specific item. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

${ }^{1}$ These data are derived from the total public service hours per year and the total outlets (central, branch, bookmobile) reported by public libraries. (See glossary in appendix D for definitions of these terms.)
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Percentage distribution is based on libraries that reported public service hours. Detail may not sum to totals because of rounding. Response rate is the percentage of libraries that reported public service hours. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

${ }^{1}$ Type of legal basis refers to the type of local government structure within which the library functions. (See glossary in appendix D for definitions of these terms.)
${ }^{2}$ An organized local government authorized in a state's constitution and statutes and established to provide general government.
${ }^{3}$ A multi-jurisdictional entity that is operated jointly by a county and a city.
${ }^{4}$ The public library is operated jointly by two or more units of local government under an intergovernmental agreement.
${ }^{5}$ The public library is privately controlled but meets the statutory definition of a public library in a given state.
${ }^{6}$ The public library is under the legal basis of a school district.
${ }^{7}$ A district, authority, board or commission is authorized by state law to provide library services
${ }^{8}$ This includes libraries under the legal bases of Native American Tribal Government and combined public/school libraries
${ }^{9}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is the percentage of libraries that reported type of legal basis. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

Table 6. Percentage distribution of public libraries, by type of geographic service area and state: Fiscal year 2003-Continued

${ }^{1}$ The types of geographic service areas (Municipal government, County/parish, Metropolitan area, etc.) are from U.S. Census geography. Public libraries identified the geographic service area type that either exactly or most nearly described the geographic area for which the public library was established to offer services and from which (or on behalf of which) the library derives income, and any areas under contract for which the library is the primary service provider.
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is the percentage of libraries that reported geographic service area. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

${ }^{1}$ The types of geographic service areas (Municipal government, County/parish, Metropolitan area, etc.) are from U.S. Census geography. Public libraries identified the geographic service area type that either exactly or most nearly described the geographic area for which the public library was established to offer services and from which (or on behalf of which) the library derives income, and any areas under contract for which the library is the primary service provider.
NOTE: Detail may not sum to totals because of rounding. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. The response rate is included in table 6 .

${ }^{1}$ See the glossary in appendix D for definitions of the types of interlibrary relationship.
${ }^{2}$ Member of a federation or cooperative excludes libraries that serve as the headquarters of a federation or cooperative.
${ }^{3}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is the percentage of libraries that reported interlibrary relationship. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

\# Rounds to zero.
${ }^{1}$ The number of users (not uses) per year was reported on the survey. Survey respondents were instructed to count a user who uses the library's electronic resources three times a week as three users. In this table, "uses" was substituted for "users" for meaningful per capita comparisons as there cannot be more "users" than the population base.
${ }^{2}$ The average per stationary outlet was calculated by dividing the total number of pubic-use Internet terminals in central and branch outlets by the total number of such outlets. See table 3 for the number of service outlets.
${ }^{3}$ Per 5,000 population and per capita are based on the total unduplicated population of legal service areas
${ }^{4}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Response rate is the percentage of libraries that reported the specific item. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

\# Rounds to zero.
${ }^{1}$ These materials were referred to as "book and serial volumes" in past years.
${ }^{2}$ Per capita and per 1,000 population are based on the total unduplicated population of legal service areas.
${ }^{3}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is calculated as the number of libraries with a nonzero value for population of legal service area which report the item, divided by the total number of libraries (with both zero and nonzero population values). For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

${ }^{1}$ Paid staff is one of four criteria used in the Public Libraries Survey to define a public library. Some states report public libraries that do not have paid staff but meet the definition of a public library under state law.
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas
NOTE: Detail may not sum to totals because of rounding. Response rate is the percentage of libraries that reported total paid FTE staff. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

${ }^{1}$ Revenue, referred to as income in past years, was renamed consistent with other NCES fiscal surveys.
${ }^{2}$ This includes federal funds, such as Library Services and Technology Act (LSTA) funds, that are distributed to public libraries through state library agencies. Other federal funds that are used by state library agencies or library cooperatives to provide services that benefit local public libraries are not included in the table because they are not received as income by public libraries.
${ }^{3}$ This includes monetary gifts and donations received in the current year, interest, library fines, fees for library services, or grants
NOTE: Detail may not sum to totals because of rounding. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. The response rate is included in table 15.

\# Rounds to zero.
${ }^{1}$ Per capita is based on the total unduplicated population of legal service areas.
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is calculated as the number of libraries with a nonzero value for population of legal service area which report the item, divided by the total number of libraries (with both zero and nonzero population values). For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

| Virgin Islands | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 100.0 | 0 | 0 | 100.0 |

${ }^{1}$ Per capita is based on the total unduplicated population of legal service areas.
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is calculated as the number of libraries with a nonzero value for population of legal service area which report the item, divided by the total number of libraries (with both zero and nonzero population values). For $\mathrm{item}(\mathrm{s})$ with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. Data were not reported by American Samoa or Puerto Rico.

- Not available.
${ }^{1}$ Per capita is based on the total unduplicated population of legal service areas.
${ }^{2}$ This includes all expenditures other than those for staff and collection, such as binding, supplies, repair or replacement of existing furnishings and equipment, and costs incurred in the operation and maintenance of physical facilities.
${ }^{3}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is calculated as the number of libraries with a nonzero value for population of legal service area which report the item, divided by the total number of libraries (with both zero and nonzero population values). For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. (Missing data were not imputed for nonresponding outlying areas.) Data were not reported by American Samoa or Puerto Rico.

— Not available.
${ }^{1}$ Per capita is based on the total unduplicated population of legal service areas.
${ }^{2}$ Total includes the 50 states and the District of Columbia but excludes outlying areas.
NOTE: Detail may not sum to totals because of rounding. Response rate is calculated as the number of libraries with a nonzero value for population of legal service area which report the item, divided by the total number of libraries (with both zero and nonzero population values). For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. (Missing data were not imputed for nonresponding outlying areas.) Data were not reported by American Samoa or Puerto Rico.

Table 22A. Percentage distribution of public libraries, by total per capita operating expenditures and population of legal service area: 50 states and the District of Columbia, fiscal year 2003

${ }^{1}$ Per capita is based on the total unduplicated population of legal service areas.
NOTE: Detail may not sum to totals because of rounding. For item(s) with response rates below 100 percent, data for nonrespondents were imputed and are included in the table. The response rate is included in table 22.

— Not available.
$\dagger$ Not applicable.
${ }^{1}$ This is the total number of single-outlet public libraries (centrals) on the public library outlet data file.
${ }^{2}$ The response rate is the total number of single-outlet public libraries (centrals) on the public library outlet data file divided by the number of single-out public libraries (centrals) on the public library data file.
${ }^{3}$ The average square footage is calculated by dividing the total square footage reported by single-outlet public libraries (centrals) by the total number of such outlets reporting the data.
${ }^{4}$ Per 1,000 population data are based on the total unduplicated population of legal service areas. Only single-outlet public libraries (centrals) that reported square footage are included.
${ }^{5}$ The square footage response rate is calculated by dividing the total number of single-outlet public libraries (centrals) reporting square footage by the total number of single-outlet public libraries (centrals) on the public library outlet data file
NOTE: Square footage is collected only from central and branch outlets (not from bookmobiles and books-by-mail only outlets), and missing data are not imputed. Data were not reported by American Samoa and Puerto Rico.

${ }^{1}$ This is the total number of multiple-outlet public libraries on the public library outlet data file (multiple outlets consisting of bookmobiles only are excluded)
${ }^{2}$ The response rate is the number of multiple-outlet public libraries on the public library outlet data file divided by the number of multiple-outlet public libraries on the public library data file.
${ }^{3}$ The average square footage is calculated by dividing the total square footage reported by multiple-outlet public libraries (centrals or branches) by the total number of such outlets reporting the data
${ }^{4}$ Per 1,000 population data are based on the total unduplicated population of legal service areas. Only multiple-outlet public libraries that reported square footage for their central outlets are included in the "Per 1,000 population" figure for centrals. Only multiple-outlet public libraries that reported square footage for all of their branch outlets are included in the "Per 1,000 population" figure for branches.
${ }^{5}$ The square footage response rate is calculated by dividing the number of multiple-outlet libraries (centrals or branches) reporting square footage by the number of such outlets on the public library outlet data file.
NOTE: Square footage is collected only from central and branch outlets (not from bookmobiles and books-by-mail only outlets), and missing data are not imputed. Data were not reported by American Samoa or Puerto Rico.

- Not available.
$\dagger$ Not applicable.
${ }^{1}$ This is the total number of central outlets on the public library outlet data file.
${ }^{2}$ The response rate is the number of central outlets on the public library outlet data file divided by the number of centrals on the public library data file
${ }^{3}$ The average square footage of central outlets is calculated by dividing the total square footage reported by central outlets by the total number of such outlets reporting the data.
${ }^{4}$ The square footage response rate is calculated by dividing the total number of central outlets reporting square footage by the total number of such outlets on the public library outlet file.
NOTE: Square footage is collected only from central and branch outlets (not from bookmobiles and books-by-mail only outlets), and missing data are not imputed. Data were not reported by American Samoa or Puerto Rico

## $\dagger$ Not applicable.

${ }^{1}$ This is the total number of branch outlets on the public library outlet data file.
${ }^{2}$ The response rate is the number of branch outlets on the public library outlet data file divided by the number of branches on the public library data file.
${ }^{3}$ The average square footage of branch outlets is calculated by dividing the total square footage reported by branch outlets by the total number of such outlets reporting the data
${ }^{4}$ The square footage response rate is calculated by dividing the total number of branch outlets reporting square footage by the total number of such outlets on the public library outlet data file.
NOTE: Square footage is collected only from central and branch outlets (not from bookmobiles and books-by-mail only outlets), and missing data are not imputed. Data were not reported by American Samoa and Puerto Rico.

## Appendix C-Technical Notes

(Page is intentionally blank.)

## Reporting Period

The fiscal year (FY) 2003 Public Libraries Survey (PLS) requested data for state FY 2003. In some states, the FY reporting period varies among localities-these states were requested to report the earliest starting date and latest ending date for their public libraries (see table C1) below. Although the reporting period spans more than a 12-month period for such states (see "Other" column below), each public library provided data for a 12month period.

Table C1. Reporting periods of public libraries, by state: Fiscal year 2003

${ }^{4}$ February 2002 to December 2003.
${ }^{5}$ January 2002 to June 2003.
NOTE: In some states, the reporting period varies among localities (see the last two columns in the table); however, each public library provided data for a 12-month period.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Federal-State Cooperative System (FSCS) for Public Library Data, Public Libraries Survey (PLS), FY 2003.

## Survey Items

A few key survey items are discussed below. The survey definitions are included in the glossary in appendix $D$. The survey instrument is in appendix $E$.

Library visits and reference transactions. Public libraries reported annual library visits and annual reference transactions based on actual counts, if available. Otherwise, annual estimates were provided based on a typical week in October, multiplied by 52.

Population items. The PLS has three population items: (1) Population of Legal Service Area for each public library, (2) Total Unduplicated Population of Legal Service Areas for the state (this figure does not include unserved areas), and (3) Official State Total Population Estimate. There are significant methodological differences in the ways states calculate the first two items, and the time period for these counts varies among states. The population data are provided by the state library agency (see table 1 of the report).

The total Population of Legal Service Area for all public libraries in a state may exceed the state's Total Unduplicated Population of Legal Service Areas or the Official State Total Population Estimate. This occurs when the state has one or more geographically adjacent libraries (for example, a county library and a city library within the county) that serve, and therefore count, the same population. Twenty-six states had overlapping service areas in FY 2003. (See appendix B for a list of these states.)

To enable meaningful state comparisons using total Population of Legal Service Area data (for example, the number of print materials ${ }^{1}$ per capita), the Population of Legal Service Area data were adjusted to eliminate duplicative reporting due to overlapping service areas. The public library data file has a derived unduplicated population of legal service area for each library for this purpose (the variable is called POPU_UND). This value was prorated for each library by calculating the ratio of a library's Population of Legal Service Area to the state's total Population of Legal Service Area and applying the ratio to the state's Total Unduplicated Population of Legal Service Areas.

Paid Full-Time-Equivalent (FTE) Staff. Paid staff were reported in FTEs (tables 13 to 14A). To ensure comparable data, 40 hours was set as the measure of full-time employment (for example, 60 hours per week of part-time work by employees in a staff category divided by the 40 -hour measure equals 1.50 FTEs). FTE data were reported to two decimal places (rounded to one decimal place in the tables).

## Survey Universe

The survey frame consists of 9,214 public libraries ( 9,211 public libraries in the 50 states and the District of Columbia and 3 public libraries in the outlying areas of Guam, the Northern Mariana Islands, and the U.S. Virgin Islands). The public libraries were identified by the state library agencies. ${ }^{2}$ The survey frame (and the survey response rates in the next section) include 291 public libraries that do not meet all the criteria in the Federal-State Cooperative System (FSCS) definition of a public library (see appendix E, Administrative Entity definitions, item 17 for the criteria). These libraries are included because they qualify as public libraries under state law. Military libraries that provide public library service and libraries that serve residents of institutions are not included. Data were not systematically collected from public libraries on Native American reservations, although 41 such libraries were reported. The FY 2003 survey is the 16th in the series. This report is based on the final data file.

[^10]
## Survey Response

Unit response. A total of 8,955 of the 9,214 public libraries in the survey frame responded to the FY 2003 PLS ( 8,952 public libraries in the 50 states and the District of Columbia and 3 public libraries in the outlying areas), for a unit response rate of 97.2 percent. Respondents to the survey are defined as public libraries for which the following data were reported: population of the legal service area and at least three of the five following items: total paid employees, total operating revenue, total operating expenditures, print materials, and total circulation.

Total response. The base for calculating response rates for specific items is the total number of libraries in the survey frame, including unit nonrespondents. At the national level, response rates fell below 85 percent ${ }^{3}$ for the following 5 items (these were new survey items, so the response rates should increase in future years):
Table C2. Items on the Public Libraries Survey with response rates below 85 percent at the national level: Fiscal year 2003

| Survey item | Response |
| :--- | ---: |
| rate |  |

Operating expenditures for other materials ..... 82.0
Capital revenue ..... 77.9
Electronic books ..... 63.0
Databases ..... 66.8
Current electronic serial subscriptions ..... 65.2
SOURCE: U.S. Department of Education, National Center for Education Statistics,Federal-State Cooperative System (FSCS) for Public Library Data, Public LibrariesSurvey (PLS), FY 2003.

At the state level, response rates fell below 85 percent in 35 states, the District of Columbia, and the Northern Mariana Islands for one or more items. (Note: The response rates are included in the tables in this report.) Missing data for the 50 states and the District of Columbia were imputed and included in the state and national totals. Missing data were not imputed for nonresponding outlying areas. See Imputation section below for a discussion of the imputation methodology.

## Data Collection

The FY 2003 PLS was released to the states over the Internet on November 17, 2003. ${ }^{4}$ States were placed into one of three reporting groups (with survey due dates of April 15, July 30, or August 31, 2004), based on their fiscal cycles or claim of extraordinary reporting hardship. States reported their data using personal computer data collection software called WinPLUS (Windows Public Library Universe System) that they downloaded from the Internet. WinPLUS was developed for NCES by the U.S. Census Bureau (the data collection agent). Edit follow-up was completed in January of 2005. The editing process is described below.

## Editing

State level. The survey software has an edit check program that generates on-screen warnings during the data entry/import process, enabling the respondent to review the data and correct many errors immediately.

[^11]Following data entry/import, the respondent generates an on-screen or printed edit report for further review and correction of the data before submitting the final file to NCES. Four types of edit checks were performed:

1. Relational edit checks. This is a data consistency check between related data elements. For example, an edit message is generated if the number of ALA-MLS Librarians is greater than Total Librarians.
2. Out-of-range edit checks. This is a comparison of the data reported for an item to the "acceptable range" of numeric values for the item. For example, an edit message is generated if average Public Service Hours per outlet per week is less than 10, or if the past year to current year change in Children's Circulation is greater than $\pm 5,000$ and greater than -30 percent to +50 percent.
3. Arithmetic edit checks. This is an arithmetical accuracy check of a reported total and its parts to the generated total. For example, an edit message is generated if Total Operating Revenue is not equal to the sum of its parts (Local Government Revenue, State Government Revenue, Federal Government Revenue, and Other Revenue).
4. Blank, zero, or invalid data edit checks. This is a check of reported data against acceptable values. For example, an edit message is generated if Print Materials is 0 or -2 .

The WinPLUS software generates state summary tables (showing state totals for all numeric data items) and single-library tables (showing data for individual public libraries in a state). Respondents were encouraged to review the tables for data quality issues before submitting their data to NCES. State data submissions also included a signed form from the Chief Officer of the State Library Agency certifying the accuracy of the data.

National level. The U.S. Census Bureau and NCES reviewed and edited the state data submissions, working closely with the State Data Coordinators and the FSCS Steering Committee.

## Imputation

All libraries, including nonresponding libraries, were sorted into imputation cells based on the region and size of population served. Imputations for nonresponding libraries were performed using the data calculated from their imputation cells. Item imputation was performed on each record with nonresponse variables. The data are identified as either imputed (estimated) or reported (actual) on the survey data file through the use of imputation codes. For more information, see Data File, Public Use: Public Libraries Survey: Fiscal Year 2002 (NCES 2004-327) on the NCES web site.

## A. For libraries that responded in 2002 but not 2003 (or in 2001 but not in 2002 or 2003):

A1. The growth rates were calculated for institutions that reported in both 2002 and 2003 (or in both 2001 and 2003). The mean (average) growth rate was calculated for each imputation cell.

A2. The average changes computed in step A1 were applied to the 2002 data (or 2001 data) of 2003 nonresponding libraries to obtain an estimate for 2003.

This "growth rate" method was used for imputing central(s), branches, bookmobiles, ALA-MLS librarians, total librarians, other paid employees, print materials, current print serial subscriptions, audio, public service hours, library visits, reference transactions, total circulation, salaries, total staff expenditures, total collection expenditures, total operating expenditures, and total expenditures.

A3. Employee benefits were derived by subtracting salaries from the estimated total staff expenditures determined in step A2.

A4. Other operating expenditures were derived by subtracting total operating expenditures from the sum of total collection expenditures and total staff expenditures estimated in step A2.

A5. For revenue variables (i.e., revenue from federal, state, and local government sources and other sources), both responding and nonresponding libraries in an imputation cell were arranged in decreasing order of size of population served. A nonresponding library's 2002 (or 2001) data were pulled forward, and a growth rate was determined by calculating the growth of the next smallest library to the nonresponding library that had data for both 2003 and 2002 (or 2003 and 2001). This growth rate was applied to the nonresponding library's 2002 (or 2001) data to obtain an estimate for 2003. If no prior year growth rate was available for the next smallest library, the growth rate was assumed to be 1.00 .

A6. Total revenue was derived by adding revenue from federal, state, and local sources and other revenue. Total paid employees was derived by adding librarians and other paid employees.

A7. Children's program attendance was estimated by multiplying the current-year total library visits by the prior-year ratio of children's program attendance to total library visits.

A8. Children's circulation was estimated by multiplying the current-year total circulation by the prioryear ratio of children's circulation to total circulation.

A9. Electronic materials expenditures was set to zero if total collection expenditures was equal to zero.
A10. For Internet terminals used by the general public, if the number of outlets equals zero, it was set to zero.

A11. For Internet terminals used by the general public, if there was 2002 or 2001 reported data, the data were carried forward as an estimate for 2003.

A12. For population variables, the prior year data were carried forward in the current year.
A13. Electronic users was estimated by multiplying the current-year Internet terminals used by the general public by the prior-year (2002 or 2001) ratio of the annualized value of electronic users to Internet terminals used by the general public.
B. For libraries with no reported data in 2001, 2002, or 2003:

B1. The "growth rate" method (described in steps A1 and A2) was used to impute for 2003 if the prior year data (2002 or 2001) were imputed using prior year reported data and the imputed value was greater than zero.

This method was used for imputing central(s), branches, bookmobiles, ALA-MLS librarians, total librarians, other paid employees, print materials, current print serial subscriptions, audio, public service hours, reference transactions, total circulation, other revenue, revenue from federal, state, and local sources, salaries, total staff expenditures, total collection expenditures, other operating expenditures, and electronic materials expenditures.

B2. The mean of the imputation cell was calculated for all libraries that responded in 2003. The cell mean was adjusted for the size of a nonresponding library by multiplying it by the ratio of the nonrespondent's total population served to the mean size of population served for all responding libraries.

This method was used for imputing central(s), branches, bookmobiles, ALA-MLS librarians, total librarians, other paid employees, print materials, current print serial subscriptions, audio, public service hours, reference transactions, total circulation, other revenue, revenue from federal, state, and local sources, salaries, total staff expenditures, total collection expenditures, other operating expenditures, and electronic materials expenditures.

B3. To impute total library visits when the prior year imputed data were not based on reported data, library visits was summed over all responding libraries in an imputation cell, as was the population served. The ratio of total library visits to total population served was multiplied by the nonrespondent's population value to estimate the nonrespondent's library visits.

B4. Children's program attendance was estimated using the method described in step B3 where the ratio of total children's program attendance to total library visits for the responding libraries in an imputation cell was multiplied by the nonrespondent's current-year library visits.

B5. Children's circulation was estimated by calculating the ratio of children's circulation to total circulation for the responding libraries in an imputation cell and multiplying the ratio by the currentyear total circulation of the nonresponding library.

B6. Total staff expenditures were derived by adding salaries and employee benefits determined in step B1 (or step B2). Total revenue was derived by adding revenue from federal, state, and local sources and other revenue. Total paid employees was derived by adding librarians and other paid employees.

B7. Total operating expenditures were derived by summing total collection expenditures, total staff expenditures, and other operating expenditures estimated in step B1 (or step B2).

B8. The median of the imputation cell was calculated for all libraries that responded in 2003. The cell median was not adjusted. This method was used for imputing Internet terminals used by the general public and electronic users when there was no reported prior year (2002 or 2001) data. If the cell median was zero but based on the value of other electronic data items it was determined that the value should be greater than zero then the imputed value was equal to the unadjusted cell mean.

## C. For all nonresponding libraries:

C1. Capital outlay was derived by imputing total expenditures (a derived variable which is the sum of total collections expenditures, total staff expenditures, other operating expenditures, and capital outlay) and subtracting total operating expenditures in order to get capital outlay. If the derived capital outlay had a negative value, it was changed to zero, total operating expenditures were changed to equal total expenditures, and total collection expenditures, total staff expenditures, and other operating expenditures were adjusted so that the sum would equal total operating expenditures. Alternatively, the cell mean (adjusted for population size) was used.

C 2 . The mean of the imputation cell was used to estimate videos and interlibrary loans. The cell mean was adjusted for the size of a nonresponding library by multiplying it by the ratio of the nonrespondent's total population served to the mean size of population served for all responding libraries.

## Appendix D—Glossary

(Page is intentionally blank.)

## Except where indicated with an asterisk (*), the following definitions of terms are exactly as they appear in the survey instruction manual.

Administrative entity. This is the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single outlet, or it may have more than one outlet.

Administrative entity with a single direct service outlet. An administrative entity that serves the public directly with one central library, books-by-mail only or one bookmobile.

Administrative entity with multiple direct service outlets where administrative offices are not separate. An administrative entity that serves the public directly with two or more service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-by-mail only.

Administrative entity with multiple direct service outlets where administrative offices are separate. An administrative entity that serves the public directly with two or more service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-by-mail only. The administrative offices are separate from the direct service outlets and do not provide direct library services.

Administrative structure. The administrative structure identifies an autonomous library entity (administrative entity) that has its own governance and funding.

ALA-MLS. Librarians with master's degrees from programs of library and information studies accredited by the American Library Association.

Attendance. See library visits.
Audio. These are materials on which sounds (only) are stored (recorded) and that can be reproduced (played back) mechanically, electronically, or both. Include records, audiocassettes, audio cartridges, audio discs (including audio-CD-ROMs), audio-reels, talking books, and other sound recordings.

Report the number of physical units, including duplicates. For smaller libraries, if physical unit data are not available, count the number of titles. Items packaged together as a unit (e.g., two audiocassettes for one recorded book) and checked out as a unit are counted as one physical unit. See also library collection.

Bookmobile(s). A bookmobile is a traveling branch library. It consists of at least all of the following: 1) a truck or van that carries an organized collection of library materials; 2) paid staff; and 3) regularly scheduled hours (bookmobile stops) for being open to the public.

Note: Count the number of vehicles in use, not the number of stops the vehicle makes.
Bookmobiles by bookmobile outlet. The number of bookmobiles in the bookmobile outlet record.
Note: A bookmobile outlet record may include one or more bookmobiles.
Branch library. A branch library is an auxiliary unit of an administrative entity which has at least all of the following: 1) separate quarters; 2) an organized collection of library materials; 3) paid staff; and 4) regularly scheduled hours for being open to the public.

Capital expenditures. Report major capital expenditures (the acquisition of or additions to fixed assets). Examples include expenditures for (a) site acquisitions; (b) new buildings; (c) additions to or renovation of
library buildings; (d) furnishings, equipment, and initial book stock for new buildings, building additions, or building renovations; (e) library automation systems; (f) new vehicles; and (g) other one-time major projects. Include federal, state, local or other revenue used for major capital expenditures. Only funds that are supported by expenditure documents (e.g. invoices, contracts, payroll records, etc.) at the point of disbursement should be included. Estimated costs are not included. Exclude expenditures for replacement and repair of existing furnishings and equipment, regular purchase of library materials, and investments for capital appreciation. Exclude contributions to endowments, or revenue passed through to another agency (e.g. fines). Funds transferred from one public library to another public library should be reported by only one of the public libraries.

Central city. The largest central city and, in some cases, up to two additional central cities are included in the title of the metropolitan area; there also are central cities that are not included in a metropolitan area title. A metropolitan area central city does not include any part of that city that extends outside the metropolitan area boundary.

Central library. This is one type of single outlet library or the library which is the operational center of a multi-ple-outlet library. Usually all processing is centralized here and the principal collections are housed here. Synonymous with main library.
*Note: Each administrative entity may report either no central library or one central library. No administrative entity may report more than one central library. Where two or more libraries are considered "centrals" for state or local purposes, one central library and one or more branch libraries should be reported to FSCS. If you wish to identify a central library in the outlet file, identify the library with the largest collection as the central library for FSCS purposes, and report all others as branches. Where there are several co-equal outlets and no principal collection, report all such outlets as branches, not central libraries.

Children's program attendance. The count of the audience at all programs for which the primary audience is children. Includes adults who attend programs intended primarily for children.

Note: Output Measures for Public Library Service to Children: A Manual of Standardized Procedures (ALA, 1992) defines children as persons age 14 and under.

Circulation. See total circulation.
Circulation of children's materials. The total annual circulation of all children's materials in all formats to all users. It includes renewals.

City/county. A multi-jurisdictional entity that is operated jointly by a county and a city.
Collection expenditures. This is the sum of all expenditures for print materials, electronic materials, and other materials.

County/parish. An organized local government authorized in a state's constitution and statutes and established to provide general government.

Current print serial subscriptions. Report the number of current print serial subscriptions, including duplicates, for all outlets. Examples of serials are periodicals (magazines), newspapers, annuals, some government documents, some reference tools, and numbered monographic series.

Current serial subscriptions. This refers to arrangements by which, in return for a sum paid in advance, serials are provided for a specified number of issues. Include current serial subscriptions in print, electronic, and digital formats.

## Direct service outlet. See public library service outlets.

Electronic materials expenditures. Report all operating expenditures for electronic (digital) materials. Types of electronic materials include e-books, e-serials (including journals), government documents, databases (including locally mounted, full text or not), electronic files, reference tools, scores, maps, or pictures in electronic or digital format, including materials digitized by the library. Electronic materials can be distributed on magnetic tape, diskettes, computer software, CD-ROM, or other portable digital carrier, and can be accessed via a computer, via access to the Internet, or by using an e-book reader. Include equipment expenditures that are inseparably bundled into the price of the information service product. Include expenditures for materials held locally and for remote electronic materials for which permanent or temporary access rights have been acquired. Include expenditures for database licenses.

Employee benefits expenditures. These are the benefits outside of salaries and wages paid and accruing to employees (including plant operations, security, and maintenance staff), regardless of whether the benefits or equivalent cash options are available to all employees. Include amounts for direct paid employee benefits including social security, retirement, medical insurance, life insurance, guaranteed disability income protection, unemployment compensation, workmen's compensation, tuition, and housing benefits. See also operating expenditures.

Expenditures (Operating). See operating expenditures.
Federal government revenue. This includes all federal government funds distributed to public libraries for expenditure by the public libraries, including federal money distributed by the state. See also operating revenue.
*Federal-State Cooperative System (FSCS) for Public Library Data. FSCS is a cooperative system through which states, the District of Columbia, and the outlying areas submit individual public library data to NCES on a voluntary basis.

FSCS public library. See public library (FSCS definition).
Full-time-equivalent (FTE) staff. See paid staff (full-time equivalent).
Geographic service area. Choose from among the following types of readily available Census geography, one code that either exactly or most nearly describes the geographic area for which the public library has been established to offer services and from which (or on behalf of which) the library derives income plus any areas served under contract for which the library is the primary service provider:

Note: The population of legal service area should be reflected in the geographic code selected.

Headquarters of a federation or cooperative. The library or entity that provides the physical space and staff who manage, coordinate, or administer the programs of the federation or cooperative.

Note: Agencies that serve other libraries rather than the public should not be reported to FSCS.
Income. See total operating revenue.
Interlibrary loans provided to. These are library materials, or copies of the materials, provided by one autonomous library to another upon request. The libraries involved in interlibrary loans are not under the same library administration. These data are reported as annual figures.

Interlibrary loans received from. These are library materials, or copies of the materials, received by one autonomous library from another library upon request. The libraries involved in interlibrary loans are not under the same library administration. These data are reported as annual figures.
*Interlibrary relationship. The interlibrary relationship identifies an administrative entity's relationship to a federation or cooperative.

Internet terminals used by general public. Number of Internet terminals (personal computers (PCs), dumb terminals, and laptops), whether purchased, leased or donated, used by the general public in the library.

Legal basis. The legal basis is the type of local government structure within which the entity functions. It reflects the state or local law which authorizes the library.

Legal service area population. See population of the legal service area.
Librarians. Persons with the title of librarian who do paid work that usually requires professional training and skill in the theoretical or scientific aspects of library work, or both, as distinct from its mechanical or clerical aspect. This data element also includes ALA-MLS.

## Librarians with ALA-MLS. See ALA-MLS.

Library collection. This section of the survey collects data on selected types of materials. It does not cover all materials. Under this category report only items the library has acquired as part of the collection and cataloged, whether purchased, leased, licensed, or donated as gifts.

Library district. This is a district, authority, board or commission authorized by state law to provide library services.

## Library materials. See library collection.

Library visits. This is the total number of persons entering the library for whatever purpose during the year.
Note: If an actual count of visits is unavailable, determine an annual estimate by counting visits during a typical week in October and multiplying the count by 52. A "typical week" is a time that is neither unusually busy nor unusually slow.

Avoid holiday times, vacation periods for key staff, or days when unusual events are taking place in the community or the library. Choose a week in which the library is open its regular hours. Include seven consecutive calendar days, from Sunday through Saturday (or whenever the library is usually open).

Local government revenue. This includes all local government funds designated by the community, district, or region and available for expenditure by the public library. Do not include the value of any contributed or inkind services or the value of any gifts and donations, library fines, fees or grants.

Do not include state, federal, and other funds passed through local government for library use. Report these funds with state government revenue or federal government revenue, as appropriate. See also operating revenue.
*Member of a federation or cooperative. An autonomous library joined by formal or informal agreement(s) with (a) other autonomous libraries in the same state to perform various services cooperatively, such as resource sharing, communications, and (b) libraries that are part of national, multi-state or statewide library federations or cooperatives (Do not include OCLC). Do not include multiple-outlet administrative entities (e.g., libraries with branches that have the word "system" in their legal name) if the entity does not have an agreement with another autonomous library.

Metropolitan area. A large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that nucleus. Some metropolitan areas are defined around two or more nuclei. Each metropolitan area must contain a place with a minimum population of 50,000 or a Census Bureau-defined urbanized area and a total metropolitan area population of at least 100,000 (75,000 in New England). A metropolitan area comprises one or more central counties. (Independent cities are considered county equivalents.) A metropolitan area may also include one or more outlying counties that have close economic and social relationships with the central county. An outlying county must have a specified level of commuting to the central counties and also must meet certain standards regarding metropolitan character, such as population density, urban population, and population growth. In New England, metropolitan areas are composed of cities and towns rather than whole counties.

Multi-jurisdictional. An entity operated jointly by two or more units of local government under an intergovernmental agreement which creates a jointly appointed board or similar means of joint governance; to be distinguished from a library which contracts to serve other jurisdictions and from special library districts.

Note: Please put city/county combinations under city/county, rather than under multi-jurisdictional.
Multiple direct service outlets where administrative offices are not separate. See administrative entity with multiple direct service outlets where administrative offices are not separate.

Multiple direct service outlets where administrative offices are separate. See administrative entity with multiple direct service outlets where administrative offices are separate.

Municipal government (city, town or village). A municipal government is an organized local government authorized in a state's constitution and statutes and established to provide general government for a specific concentration of population in a defined area.

Native American tribal government. An organized local government authorized and established to provide general government to residents of a native american reservation.

Note: Include native Alaskan villages in this category.
Non-profit association or agency libraries. An entity privately controlled but meeting the statutory definition of a public library in a given state; includes association libraries.

Official state total population estimate. This is the most recent official total population figure for your state that matches the local population figures that you are submitting to NCES. The state data coordinator should obtain this figure annually from the state data center or other official state sources.

Operating expenditures. Operating expenditures are the current and recurrent costs necessary to support the provision of library services. Significant costs, especially benefits and salaries, that are paid by other taxing agencies (government agencies with the authority to levy taxes) "on behalf of" the library may be included if the information is available to the reporting agency. Only such funds that are supported by expenditure documents (such as invoices, contracts, payroll records, etc.) at the point of disbursement should be included. Do not report the value of free items as expenditures. Do not report estimated costs as expenditures. Do not report capital expenditures under this category. See also total operating expenditures.

Operating revenue. Report revenue used for operating expenditures. Include federal, state, local, or other grants. Do not include revenue for major capital expenditures, contributions to endowments, revenue passed through to another agency (e.g., fines), or funds unspent in the previous fiscal year (e.g. carryover) Funds transferred from one public library to another public library should be reported by only one of the public libraries. The state data coordinator shall determine which library will report these funds. See also state government operating revenue; local government operating revenue; other operating revenue; federal government operating revenue; and total operating revenue.

Other operating expenditures. This includes all expenditures other than those for staff and collection.
Note: Include expenses such as binding, supplies, repair or replacement of existing furnishings and equipment, and costs incurred in the operation and maintenance of physical facilities. See also operating expenditures.
*Other operating revenue. This is all operating revenue income other than that reported under local, state, and federal. Include, for example, monetary gifts and donations received in the current year, interest, library fines, and fees for library services, or grants. Do not include the value of any contributed or in-kind services or the value of any non-monetary gifts and donations. See also operating revenue.

Other paid staff. This includes all other FTE employees paid from the reporting unit budget, including plant operations, security, and maintenance staff. See also paid staff (full-time equivalent).

Outlet. See public library service outlet.
*Paid staff (full-time equivalent). Report figures as of the last day of the fiscal year. Include all positions funded in the library's budget whether those positions are filled or not. To ensure comparable data, 40 hours per week has been set as the measure of full-time employment (FTE). For example, 60 hours per week of part-time work by employees in a staff category divided by the 40 -hour measure equals 1.50 FTEs. See also total paid employees.

Population of the legal service area. The number of people in the geographic area for which a public library has been established to offer services and from which (or on behalf of which) the library derives income, plus any areas served under contract for which the library is the primary service provider.

Note: The determination of this population figure shall be the responsibility of the state library agency. This population figure should be based on the most recent official state population figures for jurisdictions in your state available from the state data center. The state data coordinator should obtain these figures annually from the state data center or other official state sources.

Print materials. Report a single figure that includes both of the following:

1. Books in print. Books are non-serial printed publications (including music and maps) that are bound in hard or soft covers, or in loose-leaf format. Include non-serial government documents. Report the number of physical units, including duplicates. For smaller libraries, if volume data are not available, count the number of titles. Books packaged together as a unit (e.g., a two-volume set) and checked out as a unit are counted as one physical unit.
2. Serial back files in print. Serials are publications issued in successive parts, usually at regular intervals that are intended to be continued indefinitely. Serials include periodicals (magazines); newspapers; annuals (reports, yearbooks, etc); journals, memoirs, proceedings, transactions of societies; and numbered monographic series. Government documents and reference tools are often issues as serials. Except for the current volume, count unbound serials as a volume when the library has at least half of the issues in a publisher's volume. Report the number of physical units, including duplicates. For smaller libraries, if volume data are not available, count the number of titles. Serials packaged together as a unit (e.g., a two-volume serial monograph) and checked out as a unit are counted as one physical unit.
*Public library (FSCS definition). A public library is an entity that is established under state enabling laws or regulations to serve a community, district, or region, and that provides at least the following: 1) an organized collection of printed or other library materials, or a combination thereof; 2) paid staff; 3) an established schedule in which services of the staff are available to the public; 4) the facilities necessary to support such a collection, staff, and schedule; and 5) is supported in whole or in part with public funds.

Note: If the library meets all of the requirements of this definition, respond with a yes. If the library does not meet one or more of the requirements, respond with a no.

Public library service outlet. Public libraries can have one or more outlets that provide direct service to the public. The three types of public library service outlets included in this report are central outlets, branch library outlets, and bookmobile outlets. Information on a fourth type of outlet, books-by-mail only outlets, was collected but omitted from this report.

Public service hours. See weekly public service hours per outlet.
Public-use Internet terminals. See Internet terminals used by general public.
*Reference transactions. A reference transaction is an information contact which involves the knowledge, use, recommendations, interpretation, or instruction in the use of one or more information sources by a member of the library staff. It includes information and referral services. Information sources include printed and non-printed materials, machine-readable databases, catalogs and other holdings records, and, through communication or referral, other libraries and institutions and people inside and outside the library. The request may come in person, by phone, by fax, mail, electronic-mail, or through live or networked electronic reference service from an adult, a young adult, or a child.

Do not count directional transactions or questions of rules or policies. Examples of directional transactions are "Where are the children's books?" and "'m looking for a book with the call number 811.2G." An example of a question of rules or policies is "are you open until 9:00 tonight?"

Note: If an actual count of reference transactions is unavailable, determine an annual estimate by counting reference transactions during a typical week in October and multiply the count by 52. A "typical week" is a time that is neither unusually busy nor unusually slow. Avoid holiday times, vacation periods for key staff, or days when unusual events are taking place in the community or in the library. Choose a week in which the library is open its regular hours. Include seven consecutive calendar days, from Sunday through Saturday (or whenever the library is usually open).

Reporting period ending date. This is the latest date (month and year) for a 12-month period that applies to the state's data being submitted to NCES.

Note: reporting period means data for the fiscal year that ended in the previous calendar year. If data are collected for different local reporting periods, provide the latest ending date.

Reporting period starting date. This is the earliest date (month and year) for a 12-month period that applies to the state's data being submitted to NCES.

Note: reporting period means data for the fiscal year that ended in the previous calendar year. If data are collected for different local reporting periods, provide the earliest starting date.

Salaries and wages expenditures. This includes salaries and wages for all library staff (including plant operations, security, and maintenance staff) for the fiscal year. Include salaries and wages before deductions, but exclude employee benefits. See also operating expenditures.

School district. An organized local entity providing public elementary, secondary, and/or higher education which, under state law, which has sufficient administrative and fiscal autonomy to qualify as a separate government. Excludes "dependent public school systems" of county, municipal, township, or state governments.

## Serial subscription. See current serial subscriptions.

Service outlet. See public library service outlet.
Single direct service outlet. See administrative entity with a single direct service outlet.
Size of book and serial collection. See print materials.
Special library district (authority, board, commission). See library district.
Square footage of outlet. Provide the area, in square feet, of the public library outlet (central library or branch). Report the total area in square feet for each library outlet (central library or branch) separately. This is the area on all floors enclosed by the outer walls of the library outlet. Include all areas occupied by the library outlet, including those areas off-limits to the public. Include any areas shared with another agency or agencies if the outlet has use of that area.

Staff (full-time equivalent). See paid staff (full-time equivalent).
Staff expenditures. See total staff expenditures.
State government revenue. These are all funds distributed to public libraries by state government for expenditure by the public libraries, except for federal money distributed by the state. This includes funds from such sources as penal fines, license fees, and mineral rights. See also operating revenue.
*State library agency. That agency within each of the states and territories which administers the federal Library Services and Technology Act funds and which is authorized by a state to develop library services in the state. It may also provide direct services to the public.
*Stationary outlets. The sum of central and branch libraries.
Subscriptions. See current serial subscriptions. See also library collection.
Total capital outlay. See capital expenditures.
Total circulation. The total annual circulation of all library materials of all types, including renewals.
Note: Count all materials in all formats that are charged out for use outside the library. Interlibrary loan transactions included are only items borrowed for users. Do not include items checked out to another library.

## Total collection expenditures. See collection expenditures.

Total operating revenue. This is the sum of local government revenue, state government revenue, federal government revenue, and other operating revenue.

Total operating expenditures. This is the sum of total staff expenditures, total collection expenditures, and other operating expenditures.

Total paid employees. This is the sum of total librarians and all other paid staff.
Total staff expenditures. This is the sum of salaries and wages and employee benefits. See also operating expenditures.
*Total unduplicated population of legal service areas. This is the total unduplicated population of those areas in your state that receive library services. The population of unserved areas is not included in this figure.

Note: A state's actual total population of legal service areas may be different from the total population of legal service areas as calculated by WinPLUS. This happens in states where there are overlaps in population of legal service areas served by individual libraries, resulting in the same population being counted twice in the WinPLUS calculation. For states that have no overlapping jurisdictions, this number will be identical to the state's total population of legal service areas as calculated by WinPLUS. For states that do have overlaps in population of legal service areas served by individual libraries, this number must be calculated separately.

Use your state's most recent official state population figures for jurisdictions in your state as the basis for calculating the total unduplicated population of legal service area.

Unduplicated population of legal service area. See total unduplicated population of legal service areas.
Users of electronic resources per year. Annual number of users of electronic resources in the library. Electronic resources include, but are not limited to, Internet (WWW, email, Telnet, other), online indexes, CDROM reference materials, software, and the online catalog. Do not include staff use of these resources.

Note: The number of users may be counted manually, using registration logs. Count each user that uses electronic resources, regardless of the amount of time spent on the computer. A user who uses the library's electronic resources three times a year would count as three customers. Software such as "Historian" can also be used to track the number of users at each public terminal. If the data element is collected as a weekly figure, multiply that figure by 52 to annualize it.

Video. These are materials on which moving pictures are recorded, with or without sound. Electronic playback reproduces pictures, with or without sound, using a television receiver or monitor. Video formats may include tape, DVD, CD-ROM, etc.

Report the number of physical units, including duplicates. For smaller libraries, if physical unit data are not available, count the number of titles. Items packaged together as a unit (e.g., two video cassettes for one movie) and checked out as a unit are counted as one physical unit. See also library collection.

Visits. See library visits.
Web address. This is the web address of the administrative entity. http:// $\qquad$
Weekly public service hours per outlet. This is the sum of weekly public service hours per outlet.

Note: Include the hours open for public service for centrals, branches, bookmobiles, and books-by-mail only. For each bookmobile, count only the hours during which the bookmobile is open to the public. For administrative entities that offer only books-by-mail service, count the hours that the outlet is staffed for service. Minor variations in scheduled public service hours need not be included. Extensive hours closed to the public due to natural disasters or other events should be excluded even if the staff is scheduled to work.
*WinPLUS. The windows-based public library universe system data collection software.

## State Characteristics Data Element Definitions

Note: The items below are answered by the state library agency.
\# Data Element Name

01 Reporting Period Starting Date

02 Reporting Period Ending Date

03 Official State Total Population Estimate

04 Total Unduplicated Population of Legal Service Areas

## Data Element Definition

This is the earliest date (month and year) for a 12-month period that applies to the state's data being submitted to NCES.

Note: Reporting period means data for the fiscal year that ended in the previous calendar year. If data are collected for different local reporting periods, provide the earliest starting date.

This is the latest date (month and year) for a 12-month period that applies to the state's data being submitted to NCES.

Note: Reporting period means data for the fiscal year that ended in the previous calendar year. If data are collected for different local reporting periods, provide the latest ending date.

This is the most recent official total population figures for your state that matches the local population figures that you are submitting to NCES. The State Data Coordinator should obtain this figure annually from the State Data Center or other official state sources.

This is the total unduplicated population of those areas in your state that receive library services. The population of unserved areas is not included in this figure.

Note: A state's actual total population of legal service areas may be different from the total population of legal service areas as calculated by WinPLUS. This happens in states where there are overlaps in population of legal service areas served by individual libraries, resulting in the same population being counted twice in the WinPLUS calculation. For states that have no overlapping jurisdictions, this number will be identical to your state's total population of legal service areas as calculated by WinPLUS. For states that do have overlaps in population of legal service areas served by individual libraries, this number must be calculated separately.

Use your state's most recent official state population figures for jurisdictions in your state as the basis for calculating the total unduplicated population of legal service area.

## Administrative Entity Data Element Definitions

Administrative Entity. (This is not a WinPLUS data element.) This is the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The administrative entity may have a single outlet, or it may have more than one outlet.

Select one of the following:
HQ-Headquarters of a Federation or Cooperative ME-Member of a Federation or Cooperative NO-Not a Member of a Federation or Cooperative

HQ-Headquarters of a Federation or Cooperative. The library or entity that provides the physical space and staff who manage, coordinate, or administer the programs of the federation or cooperative.

Note: Agencies that serve other libraries rather than the public should not be reported to FSCS.

ME-Member of a Federation or Cooperative. An autonomous library joined by formal or informal agreement(s) with (a) other autonomous libraries in the same state to perform various services cooperatively, such as resource sharing, communications, etc., and (b) libraries that are part of national, multi-state or statewide library federations or cooperatives. (Do not include the Online Computer Library Center [OCLC].) Do not include multiple-outlet administrative entities (e.g., libraries with branches and that have the word "system" in their legal name) if the entity does not have an agreement with another autonomous library.

The legal basis is the type of local government structure within which the entity functions. It reflects the state or local law which authorizes the library.

Select one of the following:
CC—City/County
Cl -Municipal Government (city, town or village)
CO-County/Parish
LD-Library District (authority, board, commission)
MJ-Multi-jurisdictional
NL—Native American Tribal Government
NP—Non-profit Association or Agency
SD-School District
OT-Other

CC—City/County. A multi-jurisdictional entity that is operated jointly by a county and a city.

Cl—Municipal Government (city, town or village). A municipal government is an organized local government authorized in a state's constitution and statutes and established to provide general government for a specific concentration of population in a defined area.

CO—County/Parish. An organized local government authorized in a state's constitution and statutes and established to provide general government.

LD—Library District (authority, board, commission). This is a district, authority, board or commission authorized by state law to provide library services.

MJ—Multi-jurisdictional. An entity operated jointly by two or more units of local government under an intergovernmental agreement which creates a jointly appointed board or similar means of joint governance; to be distinguished from a library which contracts to serve other jurisdictions and from special library districts.

Note: Please put city/county combinations under 'CC', rather than under Multi-jurisdictional.

NL—Native American Tribal Government. An organized local government authorized and established to provide general government to residents of a Native American reservation.

Note: Include native Alaskan villages in this category.
NP—Non-profit Association or Agency. An entity privately controlled but meeting the statutory definition of a public library in a given state; includes association libraries.

SD—School District. An organized local entity providing public elementary, secondary, and/or higher education which, under state law, has sufficient administrative and fiscal autonomy to qualify as a separate government. Excludes "dependent public school systems" of county, municipal, township, or state governments.

OT-Other.
This code identifies an autonomous library entity (administrative entity) that has its own governance and funding.

An administrative entity is the agency that is legally established under local or state law to provide public library service to the population of a local jurisdiction. The
administrative entity may have a single outlet, or it may have more than one outlet.

Select one of the following:
MA—Administrative Entity with Multiple Direct Service Outlets where Administrative Offices are Separate

MO—Administrative Entity with Multiple Direct Service Outlets where Administrative Offices are Not Separate

SO—Administrative Entity with a Single Direct Service Outlet
MA—Administrative Entity with Multiple Direct Service Outlets where Administrative Offices are Separate. An administrative entity that serves the public directly with two or more service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-bymail only. The administrative offices are separate from the direct service outlets and do not provide direct library services.

MO—Administrative Entity with Multiple Direct Service Outlets where Administrative Offices are Not Separate. An administrative entity that serves the public directly with two or more service outlets, including some combination of one central library, branch(es), bookmobile(s), and/or books-bymail only.

SO—Administrative Entity with a Single Direct Service Outlet. An administrative entity that serves the public directly with one central library, books-by-mail only, or one bookmobile.

Answer < $\mathrm{Y}>$ es or <N>0 to the following question: "Does this public library meet all the criteria of the FSCS public library definition?"

A public library is an entity that is established under state enabling laws or regulations to serve a community, district, or region, and that provides at least the following:

1. an organized collection of printed or other library materials, or a combination thereof;
2. paid staff;
3. an established schedule in which services of the staff are available to the public;
4. the facilities necessary to support such a collection, staff, and schedule; and
5. is supported in whole or in part with public funds.

Note: If the library meets all of the requirements of this definition, respond with a yes. If the library does not meet one or more of the requirements, respond with a $<N>0$.

18 Geographic Code**

19 Legal Service Area Boundary Change*

22 Population of the Legal Service Area

Choose from among the following types of readily available Census geography, one code that either exactly or most nearly describes the geographic area for which the public library has been established to offer services and from which (or on behalf of which) the library derives revenue, plus any areas served under contract for which the library is the primary service provider.

Note: The Population of the Legal Service Area (data element \#22) should be reflected in the geographic code selected. For further clarification of municipal government, county/parish, and school district, refer to definitions under Legal Basis Code (data element \#15). For further clarification of metropolitan area, see Metropolitan Status Code "NCMetropolitan Area, but Not Within Central City Limits," (data element \#10 in Appendix F-Outlet Data Element Definitions).

Cl1—Municipal Government (city, town or village) (exactly)
Cl2—Municipal Government (city, town or village) (most nearly)
CO1—County/Parish (exactly)
CO2—County/Parish (most nearly)
MA1—Metropolitan Area (exactly)
MA2—Metropolitan Area (most nearly)
MC1—Multi-County (exactly)
MC2—Multi-County (most nearly)
SD1—School District (exactly)
SD2—School District (most nearly)
OTH—Other
Answer <Y>es or <N>o to the following question: "Did the administrative entity's legal service area boundaries change since last year?"

Note: Changes are likely to result, for example, when a municipality annexes land, when one municipality in a county becomes either an independent city or its own county necessitating its exclusion from the first county's geography, or when an administrative entity contracts to provide public library service for some additional geographic area other than the geographic area for which it was established (e.g., a municipal library contracts to serve county residents).
(Reserved for future use.)
(Reserved for future use.)
The number of people in the geographic area for which a public library has been established to offer services and from which (or on behalf of which) the library derives revenue, plus any areas served under contract for which the library is the primary service provider.

Note: The determination of this population figure shall be the responsibility of the state library agency. This population figure should be based on the most recent official state

23 Number of Central Libraries

24 Number of Branch Libraries

25 Number of Bookmobiles
population figures for jurisdictions in your state available from the State Data Center. The State Data Coordinator should obtain these figures annually from the State Data Center or other official state sources.

This is one type of single outlet library (SO) or the library which is the operational center of a multiple-outlet library (MO or MA). Usually all processing is centralized here and the principal collections are housed here. Synonymous with main library.

Note: Each administrative entity may report either no central library or one central library. No administrative entity may report more than one central library. In the administrative entity file, this simply means reporting " 0 " or " 1 " for central library. Where two or more libraries are considered "centrals" for state or local purposes, one central library and one or more branch libraries should be reported to FSCS. If you wish to identify a central library in the outlet file, identify the library with the largest collection as the central library for FSCS purposes, and report all others as branches. Where there are several co-equal outlets and no principal collection, report all such outlets as branches, not central libraries.

A branch library is an auxiliary unit of an administrative entity which has at least all of the following:

1. separate quarters;
2. an organized collection of library materials;
3. paid staff; and
4. regularly scheduled hours for being open to the public.

A bookmobile is a traveling branch library. It consists of at least all of the following:

1. a truck or van that carries an organized collection of library materials;
2. paid staff; and
3. regularly scheduled hours (bookmobile stops) for being open to the public.

Note: Count the number of vehicles in use, not the number of stops the vehicle makes.

## PAID STAFF (FULL-TIME EQUIVALENT)

Report figures as of the last day of the fiscal year. Include all positions funded in the library's budget whether those positions are filled or not. To ensure comparable data, 40 hours per week has been set as the measure of full-time employment (FTE). For example, 60 hours per week of part-time work by employees in a staff category divided by the 40-hour measure equals 1.50 FTEs.

27 Total Librarians

28 All Other Paid Staff

29 Total Paid Employees

Persons with the title of librarian who do paid work that usually requires professional training and skill in the theoretical or scientific aspects of library work, or both, as distinct from its mechanical or clerical aspect. This data element also includes ALA-MLS (data element \#26).

This includes all other FTE employees paid from the reporting unit budget, including plant operations, security, and maintenance staff.

This is the sum of total librarians (data element \#27) and all other paid staff (data element \#28).

## OPERATING REVENUE**

Report revenue used for operating expenditures as defined below. Include federal, state, local, or other grants. DO NOT include revenue for major capital expenditures, contributions to endowments, revenue passed through to another agency (e.g., fines), or funds unspent in the previous fiscal year (e.g., carryover). (Funds transferred from one public library to another public library should be reported by only one of the public libraries. The State Data Coordinator shall determine which library will report these funds.)

## 30 Local Government Revenue**

31 State Government Revenue**

32 Federal Government Revenue**

33 Other Operating Revenue**

This includes all local government funds designated by the community, district, or region and available for expenditure by the public library. Do not include the value of any contributed or in-kind services or the value of any gifts and donations, library fines, fees, or grants.

Do not include state, federal, and other funds passed through local government for library use. Report these funds with state government revenue or federal government revenue, as appropriate.

These are all funds distributed to public libraries by state government for expenditure by the public libraries, except for federal money distributed by the state. This includes funds from such sources as penal fines, license fees, and mineral rights.

Note: If operating revenue from consolidated taxes is the result of state legislation, the revenue should be reported under state revenue (even though the revenue may be from multiple sources).

This includes all federal government funds distributed to public libraries for expenditure by the public libraries, including federal money distributed by the state.

This is all operating revenue other than that reported under local, state, and federal (data elements \#30, \#31, and \#32). Include, for example, monetary gifts and donations received in the current year, interest, library fines, fees for library services, or grants. Do not include the value of any contributed or in-kind services or the value of any non-monetary gifts and donations.

This is the sum of local government revenue, state government revenue, federal government revenue, and other operating revenue (data elements \#30 through \#33).

## OPERATING EXPENDITURES**

Operating expenditures are the current and recurrent costs necessary to support the provision of library services. Significant costs, especially benefits and salaries, that are paid by other taxing agencies (government agencies with the authority to levy taxes) "on behalf of" the library may be included if the information is available to the reporting agency. Only such funds that are supported by expenditure documents (such as invoices, contracts, payroll records, etc.) at the point of disbursement should be included. Do not report the value of free items as expenditures. Do not report estimated costs as expenditures. Do not report capital expenditures under this category.

## Staff Expenditures

## 35 Salaries \& Wages Expenditures

36 Employee Benefits Expenditures

37 Total Staff Expenditures

This includes salaries and wages for all library staff (including plant operations, security, and maintenance staff) for the fiscal year. Include salaries and wages before deductions but exclude employee benefits.

These are the benefits outside of salaries and wages paid and accruing to employees (including plant operations, security, and maintenance staff), regardless of whether the benefits or equivalent cash options are available to all employees. Include amounts for direct paid employee benefits including Social Security, retirement, medical insurance, life insurance, guaranteed disability income protection, unemployment compensation, workmen's compensation, tuition, and housing benefits.

This is the sum of salaries and wages (data element \#35) and employee benefits (data element \#36).

## Collection Expenditures**

This includes all operating expenditures from the library budget for materials in print, microform, electronic and other formats considered part of the collection, whether purchased, leased, or licensed. Exclude charges or fees for interlibrary loans and expenditures for document delivery.

## 38 Print Materials Expenditures*

39 Electronic Materials Expenditures**

Report all operating expenditures for the following print materials: books, serial back files, current serial subscriptions, government documents, and any other print acquisitions.

Report all operating expenditures for electronic (digital) materials. Types of electronic materials include e-books, e-serials (including journals), government documents, databases (including locally mounted, full text or not), electronic files, reference tools, scores, maps, or pictures in electronic or digital format, including materials digitized by the library. Electronic materials can be distributed on magnetic tape, diskettes, computer software, CD-ROM, or other portable digital carrier, and can be accessed via a computer, via access to the Internet, or by using an e-book reader. Include equipment expenditures that are inseparably

40 Other Materials Expenditures*

41 Total Collection Expenditures**

42 Other Operating Expenditures

43 Total Operating Expenditures
bundled into the price of the information service product. Include expenditures for materials held locally and for remote electronic materials for which permanent or temporary access rights have been acquired. Include expenditures for database licenses. [Note: Based on ISO 2789 definition.]

Report all operating expenditures for other materials, such as microform, audio, video, DVD, and materials in new forms.

This is the sum of all expenditures for print materials, electronic materials, and other materials (data elements \#38, \#39, and \#40).

This includes all expenditures other than those for staff (data element \#37) and collection (data element \#41).

Note: Include expenses such as binding, supplies, repair or replacement of existing furnishings and equipment, and costs incurred in the operation and maintenance of physical facilities.

This is the sum of total staff expenditures, total collection expenditures, and other operating expenditures (data elements \#37, \#41, and \#42).

Report all revenue to be used for major capital expenditures. Examples include funds received for (a) site acquisition; (b) new buildings; (c) additions to or renovation of library buildings; (d) furnishings, equipment, and initial book stock for new buildings, building additions, or building renovations; (e) library automation systems; (f) new vehicles; and (g) other one-time major projects. Include federal, state, local, and other revenue to be used for major capital expenditures. Exclude revenue to be used for replacement and repair of existing furnishings and equipment, regular purchase of library materials, and investments for capital appreciation. Exclude contributions to endowments, or revenue passed through to another agency (e.g., fines), or funds unspent in the previous fiscal year (e.g., carryover). Funds transferred from one public library to another public library should be reported by only one of the public libraries.

Report major capital expenditures (the acquisition of or additions to fixed assets). Examples include expenditures for (a) site acquisitions; (b) new buildings; (c) additions to or renovation of library buildings; (d) furnishings, equipment, and initial book stock for new buildings, building additions, or building renovations; (e) library automation systems; (f) new vehicles; and ( g ) other one-time major projects. Include federal, state, local, or other revenue used for major capital expenditures. Only funds that are supported by expenditure documents (e.g., invoices, contracts, payroll records, etc.) at the point of disbursement should be included. Estimated costs are not included. Exclude expenditures for replacement and repair of existing furnishings and equipment,
regular purchase of library materials, and investments for capital appreciation. Exclude contributions to endowments, or revenue passed through to another agency (e.g., fines). Funds transferred from one public library to another public library should be reported by only one of the public libraries.

## LIBRARY COLLECTION**

This section of the survey collects data on selected types of materials. It does not cover all materials. Under this category report only items the library has acquired as part of the collection and catalogued, whether purchased, leased, licensed, or donated as gifts.

Report a single figure that includes both of the following:

1. Books in print. Books are non-serial printed publications (including music and maps) that are bound in hard or soft covers, or in loose-leaf format. Include non-serial government documents. Report the number of physical units, including duplicates. For smaller libraries, if volume data are not available, count the number of titles. Books packaged together as a unit (e.g., a 2 -volume set) and checked out as a unit are counted as one physical unit.
2. Serial back files in print. Serials are publications issued in successive parts, usually at regular intervals, that are intended to be continued indefinitely. Serials include periodicals (magazines); newspapers; annuals (reports, yearbooks, etc.); journals, memoirs, proceedings, and transactions of societies; and numbered monographic series. Government documents and reference tools are often issued as serials. Except for the current volume, count unbound serials as a volume when the library has at least half of the issues in a publisher's volume. Report the number of physical units, including duplicates. For smaller libraries, if volume data are not available, count the number of titles. Serials packaged together as a unit (e.g., a 2-volume serial monograph) and checked out as a unit are counted as one physical unit.

47 Electronic Books (E-Books)*

E-books are digital documents (including those digitized by the library), licensed or not, where searchable text is prevalent, and which can be seen in analogy to a printed book (monograph). Include non-serial government documents. E-books are loaned to users on portable devices (e-book readers) or by transmitting the contents to the user's personal computer for a limited time. Include ebooks held locally and remote e-books for which permanent or temporary access rights have been acquired. Report the number of physical or electronic units, including duplicates, for all outlets. For smaller libraries, if volume data are not available, the number of titles may be counted. E-books packaged together as a unit (e.g., multiple titles on a single e-book reader) and checked out as a unit are counted as one unit.

48 Audio**

49 Video**

50 Databases*

Note: Under this category report only items the library has selected as part of the collection and made accessible through the library's Online Public Access Catalog (OPAC).

These are materials on which sounds (only) are stored (recorded) and that can be reproduced (played back) mechanically, electronically, or both. Include records, audiocassettes, audio cartridges, audio discs (including audio-CD-ROMs), audio-reels, talking books, and other sound recordings.

Report the number of physical units, including duplicates. For smaller libraries, if physical unit data are not available, count the number of titles. Items packaged together as a unit (e.g., two audiocassettes for one recorded book) and checked out as a unit are counted as one physical unit.

These are materials on which moving pictures are recorded, with or without sound. Electronic playback reproduces pictures, with or without sound, using a television receiver or monitor. Video formats may include tape, DVD, CD-ROM, etc.

Report the number of physical units, including duplicates. For smaller libraries, if physical unit data are not available, count the number of titles. Items packaged together as a unit (e.g., two video cassettes for one movie) and checked out as a unit are counted as one physical unit.

Report the number of databases (including locally mounted or remote, full-text or not) for which temporary or permanent access rights have been acquired. A database is a collection of electronically stored data or unit records (facts, bibliographic data, abstracts, texts) with a common user interface and software for the retrieval and manipulation of the data.

Note: The data or records are usually collected with a particular intent and relate to a defined topic. A database may be issued on CD-ROM, diskette, or other direct access method, or as a computer file accessed via dial-up methods or via the Internet. Include such services as EBSCO Host and OCLC FirstSearch, but do not include other electronic serial databases (e.g., Project MUSE, OCLC ECO Project).

Report the number of database licenses (subscription or one-time purchases). Each licensed database product is counted individually even if access to several licensed database products is supported through the same interface (e.g., ProQuest, OCLC FirstSearch).

## Current Serial Subscriptions**

Current serial subscriptions are arrangements by which, in return for a sum paid in advance, serials are provided for a specified number of issues. Include current serial subscriptions in print, electronic, and digital formats.

51 Current Print Serial Subscriptions**

52 Current Electronic Serial Subscriptions*

Report the number of current print serial subscriptions, including duplicates, for all outlets. Examples of serials are periodicals (magazines), newspapers, annuals, some government documents, some reference tools, and numbered monographic series.

Report the number of current electronic, electronic and other format, and digital serial subscriptions (e-serials, e-journals), including duplicates, for all outlets. Examples include periodicals (magazines), newspapers, annuals, some government documents, some reference tools, and numbered monographic series distributed in the following ways: (a) via the Internet (e.g., HTML, PDF, JPEG, or compressed file formats such as zipped files), (b) on CDROM or other portable digital carrier, (c) on databases (including locally mounted databases), and (d) on diskettes or magnetic tapes. Electronic serial subscriptions include serials held locally or remote resources that the library has authorization to access, including those available through statewide or consortia agreements. Do not include subscriptions to indexing and abstracting databases that include full-text serial content (e.g., EBSCO Host, ProQuest, OCLC FirstSearch).

## SERVICES

53 Public Service Hours Per Year

54 Library Visits

This is the sum of annual public service hours for outlets.
Note: Include the hours open for public service for centrals (data element \#23), branches (data element \#24), bookmobiles (data element \#25), and books-by-mail only. For each bookmobile, count only the hours during which the bookmobile is open to the public. For Administrative Entities that offer ONLY books-by-mail service, count the hours that the outlet is staffed for service. Minor variations in scheduled public service hours need not be included, however, extensive hours closed to the public due to natural disasters or other events should be excluded even if the staff is scheduled to work.

This is the total number of persons entering the library for whatever purpose during the year.

Note: If an actual count of visits is unavailable, determine an annual estimate by counting visits during a typical week in October and multiplying the count by 52. A "typical week" is a time that is neither unusually busy nor unusually slow. Avoid holiday times, vacation periods for key staff, or days when unusual events are taking place in the community or the library. Choose a week in which the library is open its regular hours. Include seven consecutive calendar days,

55 Reference Transactions**

56 Total Circulation

INTER-LIBRARY LOANS
57 Provided To**

58 Received From**
from Sunday through Saturday (or whenever the library is usually open).

A reference transaction is an information contact which involves the knowledge, use, recommendations, interpretation, or instruction in the use of one or more information sources by a member of the library staff. It includes information and referral services. Information sources include printed and non-printed materials, machine-readable databases, catalogs and other holdings records, and, through communication or referral, other libraries and institutions and people inside and outside the library. The request may come in person, by phone, by fax, mail, electronic mail, or through live or networked electronic reference service from an adult, a young adult, or a child.

Do not count directional transactions or questions of rules or policies. Examples of directional transactions are "Where are the children's books?" and "I'm looking for a book with the call number 811.2G." An example of a question of rules or policies is "Are you open until 9:00 tonight?"

Note: If an annual count of reference transactions is unavailable, determine an annual estimate by counting reference transactions during a typical week in October and multiply the count by 52. A "typical week" is a time that is neither unusually busy nor unusually slow. Avoid holiday times, vacation periods for key staff, or days when unusual events are taking place in the community or in the library. Choose a week in which the library is open its regular hours. Include seven consecutive calendar days, from Sunday through Saturday (or whenever the library is usually open).

The total annual circulation of all library materials of all types, including renewals.

Note: Count all materials in all formats that are charged out for use outside the library. Interlibrary loan transactions included are only items borrowed for users. Do not include items checked out to another library.

These are library materials, or copies of the materials, provided by one autonomous library to another upon request. The libraries involved in interlibrary loans are not under the same library administration. These data are reported as annual figures.

These are library materials, or copies of the materials, received by one autonomous library from another upon request. The libraries involved in interlibrary loans are not under the same library administration. These data are reported as annual figures.

## CHILDREN'S SERVICES

59 Circulation of Children's Materials

60 Children's Program Attendance

The total annual circulation of all children's materials in all formats to all users. It includes renewals.

The count of the audience at all programs for which the primary audience is children. Includes adults who attend programs intended primarily for children.

Note: Output Measures for Public Library Service to Children; A Manual of Standardized Procedures (ALA, 1992) defines children as persons age 14 and under.

## OTHER ELECTRONIC INFORMATION

61 Number of Internet Terminals
Used by General Public**

62 Number of Users of Electronic Resources Per Year**

Report the number of Internet terminals (personal computers (PCs), dumb terminals, and laptops), whether purchased, leased or donated, used by the general public in the library.

Report the annual number of users of electronic resources in the library. Electronic resources include, but are not limited to, Internet (WWW, email, Telnet, other), online indexes, CDROM reference materials, software, and the online catalog. Do not include staff use of these resources.

Note: The number of users may be counted manually, using registration logs. Count each user that uses electronic resources, regardless of the amount of time spent on the computer. A user who uses the library's electronic resources three times a year would count as three customers. Software such as "Historian" can also be used to track the number of users at each public terminal. If the data element is collected as a weekly figure, multiply that figure by 52 to annualize it.

[^12]
## Outlet Data Element Definitions

| \# | Data Element Name | Data Element Definition |
| :---: | :---: | :---: |
| 1A | FSCS ID (Automatic Display) | This is the identification code assigned by NCES. Outlets are assigned the same FSCS ID as the administrative entity to which they belong, with a unique three-digit suffix added to distinguish each outlet. |
| 01 | LIB ID (Optional) | This is the state-assigned identification code for the outlet. |
| 02 | Name** | This is the name of the outlet. <br> Note: Provide the name of the outlet. Do not use acronyms. Do not abbreviate the name unless it exceeds the WinPLUS field length of 60 characters. Avoid abbreviations at the beginning of the name and do not punctuate abbreviations. (See Appendix Q—Standard Abbreviations for WinPLUS.) |
| 03 | Street Address | This is the complete street address of the outlet. <br> Note: Do not report a post office box or general delivery. For a bookmobile that operates from an administrative entity, branch, or central library, report the address of the administrative entity, branch or central library from which it operates. For a bookmobile that is itself the administrative entity, report the address where the bookmobile is parked at night. |
| 04 | City | This is the city or town in which the outlet is located. |
| 05 | Zip | This is the standard five-digit postal zip code for the street address of the outlet. |
| 06 | Zip4 | This is the four-digit postal zip code extension for the street address of the outlet. |
| 07 | County of the Outlet | This is the county in which the outlet is located. |
| 08 | Phone | This is the telephone number of the outlet, including area code. |
|  |  | Note: Report telephone number without spacing or punctuation. If the outlet has no phone, enter " -3 " (for Not Applicable). |
| 09 | Outlet Type Code | An outlet is a unit of an administrative entity that provides direct public library service. |
|  |  | Select one of the following: |
|  |  | BM—Books-by-Mail Only <br> BR—Branch Library <br> BS—Bookmobile(s) <br> CE-Central Library |

BM—Books-by-Mail Only. A direct mail order service which provides books and other library materials. Books-by-mail typically serves rural residents, the disabled, the homebound, and others without access to another type of public library outlet. Requests for materials are usually received by mail and by telephone only. Only books-by-mail services that are housed separately from any other type of direct public service outlet (that is, central library, branches, or bookmobiles) should be coded here.

BR—Branch Library. A branch library is an auxiliary unit of an administrative entity which has at least all of the following:

1. separate quarters;
2. an organized collection of library materials;
3. paid staff; and
4. regularly scheduled hours for being open to the public.

BS—Bookmobile(s). A bookmobile is a traveling branch library. It consists of at least all of the following:

1. a truck or van that carries an organized collection of library materials;
2. a paid staff; and
3. regularly scheduled hours (bookmobile stops) for being open to the public.

Note: A separate outlet record may be created for each bookmobile. You may wish to create separate outlet records for individual bookmobiles if (1) they have different addresses and/or (2) they have different Metropolitan Status Codes. Alternatively, a bookmobile outlet record may include more than one bookmobile.

CE-Central Library. This is one type of single outlet library (SO) or the library which is the operational center of a multiple-outlet library (MO or MA). Usually all processing is centralized here and the principal collections are housed here. Synonymous with main library.

Note: Each administrative entity may report either no central library or one central library. No administrative entity may report more than one central library. If you wish to identify a central library in the outlet file, identify the library with the largest collection as the central library for FSCS purposes, and report all others as branches. Where there are several co-equal outlets and no principal collection, report all such outlets as branches, not central libraries. Bookmobile Outlet Record

Select one of the following. Bookmobiles should report the code which best describes their primary service area.

CC-Within the City Limits of the Central City of a Metropolitan Area.
NC—Metropolitan Area, but Not Within Central City Limits.
NO—Not in a Metropolitan Area.
M—Missing (Unknown, Not Reported).
Note: Contact the State Data Center for specific information about Metropolitan Areas in your state.

CC-Central City. The largest central city and, in some cases, up to two additional central cities are included in the title of the Metropolitan Area; there also are central cities that are not included in a Metropolitan Area title. A Metropolitan Area central city does not include any part of that city that extends outside the Metropolitan Area boundary.

NC-Metropolitan Area, but not within central city limits. A large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that nucleus. Some Metropolitan Areas are defined around two or more nuclei. Each Metropolitan Area must contain a place with a minimum population of 50,000 or a Census Bureau-defined urbanized area and a total Metropolitan Area population of at least 100,000 (75,000 in New England). A Metropolitan Area comprises one or more central counties. (Independent cities are considered county equivalents.) A Metropolitan Area may also include one or more outlying counties that have close economic and social relationships with the central county. An outlying county must have a specified level of commuting to the central counties and also must meet certain standards regarding metropolitan character, such as population density, urban population, and population growth. In New England, Metropolitan Areas are composed of cities and towns rather than whole counties.

Provide the area, in square feet, of the public library outlet (central library or branch). Report the total area in square feet for each library outlet (central library or branch) separately. This is the area on all floors enclosed by the outer walls of the library outlet. Include all areas occupied by the library outlet, including those areas off-limits to the public. Include any areas shared with another agency or agencies if the outlet has use of that area.

The number of bookmobiles in the bookmobile outlet record.
Note: A bookmobile outlet record may include one or more bookmobiles. Complete this data element only if the outlet record is of the type BS—Bookmobile(s) (see outlet data element \#9). A bookmobile is a traveling branch library. It consists of at least all of the following:

1. a truck or van that carries an organized collection of library materials;
2. a paid staff; and
3. regular scheduled hours (bookmobile stops) for being open to the public. Count vehicles in use, not the number of stops the vehicle makes.
[^13]
[^0]:    ${ }^{1}$ Trend data from some of the earlier surveys are discussed in Public Library Trends Analysis, Fiscal Years 1992-1996 (NCES 2001-324) (Glover 2001), an NCES Statistical Analysis Report.

[^1]:    ${ }^{2}$ The definitions used by some states in collecting data from their public libraries may not be consistent with the PLS definitions. The 1994 NCES Report on Coverage Evaluation in the Public Library Statistics Program (NCES 94-430) and the 1995 NCES Report on Evaluation of Definitions Used in the Public Library Statistics Program (NCES 95-430) address issues of consistency in definitions among states. The reports are available on the NCES website at http://nces.ed.gov/pubsearch/getpubcats.asp?sid=041\#052.

[^2]:    ${ }^{3}$ This was superseded by the National Education Statistics Act of 1994 (P.L. 103-382) and, more recently, by the Education Sciences Reform Act of 2002.

[^3]:    ${ }^{4}$ Of the 9,211 public libraries, 7,433 were single-outlet libraries and 1,778 were multiple-outlet libraries.
    ${ }^{5}$ See the glossary (appendix D) for definitions of the terms used in this report.
    ${ }^{6}$ This percentage was derived by dividing the total unduplicated population of legal service areas for the 50 states and the District of Columbia by the sum of their official state total population estimates. The estimates were obtained from the state data center or other official state sources (table 1). The percentage is based on unrounded data. (Also see Data File, Public Use: Public Libraries Survey: Fiscal Year 2003 [NCES 2005-362]).
    ${ }^{7}$ The sum of the five columns in table 1 A where the population of the legal service area is 50,000 or more is 11.4 percent. The sum of the five columns in table 1B where the population of the legal service area is 50,000 or more is 71.7 percent. (The percentages are based on unrounded data.)
    ${ }^{8}$ Detail may not sum to totals because of rounding.
    ${ }^{9}$ Libraries that identify themselves as the headquarters of a federation or cooperative service are not included in the count of members of a federation or cooperative service.

[^4]:    ${ }^{10}$ The number of users (not uses) per year was reported on the survey. Survey respondents were instructed to count a user who uses the library's electronic resources three times a week as three users. In this finding, "uses" was substituted for "users" for meaningful per capita comparisons as there cannot be more "users" than the population base.
    ${ }^{11}$ The average was calculated by dividing the total number of Internet terminals available for public use in central and branch outlets by the total number of such outlets. (See table 3 for outlet data.)
    ${ }^{12}$ This percentage was derived by summing the unduplicated population of legal service areas for all public libraries that provided public-use Internet terminals, and then dividing the total by the unduplicated population of legal service areas in the United States (table 1). (Also see Data File, Public Use: Public Libraries Survey: Fiscal Year 2003 [NCES 2005362]).

[^5]:    ${ }^{13}$ Detail may not sum to totals because of rounding.
    ${ }^{14}$ Per capita figures are based on the total unduplicated population of legal service areas (which excludes populations of unserved areas) in the 50 states and the District of Columbia, not on the state total population estimates.
    ${ }^{15}$ Percentages are based on unrounded data.
    ${ }^{16}$ Electronic materials expenditures: This includes all operating expenditures for electronic (digital) materials. Types of electronic materials include e-books, e-serials (including journals), government documents, databases (including locally mounted, full text or not), electronic files, reference tools, scores, maps, or pictures in electronic or digital format, including materials digitized by the library. Electronic materials can be distributed on magnetic tape, diskettes, computer software, CD-ROM, or other portable digital carrier, and can be accessed via a computer, via access to the Internet, or by using an e-book reader. Includes equipment expenditures that are inseparably bundled into the price of the information service product. Includes expenditures for materials held locally and for remote electronic materials for which permanent or temporary access rights have been acquired. Includes expenditures for database licenses.

[^6]:    ${ }^{1}$ Total stationary outlets is the sum of central and branch libraries.

[^7]:    See notes at end of table.

[^8]:    See notes at end of table.

[^9]:    - Not available

[^10]:    ${ }^{1}$ These materials were referred to as book and serial volumes in previous years.
    ${ }^{2}$ Public libraries in two outlying areas, American Samoa and Puerto Rico, are not included in the survey frame because their state library agencies have never responded to NCES's request for participation in the survey. Their public libraries have not been identified and cannot be included in the survey frame or response rate calculations.

[^11]:    ${ }^{3}$ The NCES Statistical Standards stipulate that if the item response rate is below 85 percent for any items used in a report, a nonresponse bias analysis is required for each of those items.
    ${ }^{4}$ The survey instrument is in appendix E.

[^12]:    * New data element.
    ** Data element name, category, definition, or note was revised.

[^13]:    ** Note revised.
