Commissioner
The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

## Executive Summary

During the 1995-96 academic year, one-half of the undergraduates enrolled in postsecondary education received financial aid through programs funded by the federal government, the states, the postsecondary institutions themselves, or other organizations. The average amount of aid, for those who received aid, was about $\$ 4,900$ (figure 1). Nearly 40 percent of all undergraduates received grant aid and one-fourth took out student loans. The average amount of grant aid was $\$ 2,700$, while the average student loan was $\$ 4,100$. Among students enrolled full time for a full academic year ( 38 percent of all undergraduates), two-thirds received financial aid. Fifty-four percent received grants with an average value of $\$ 3,900$, and 44 percent received student loans, borrowing an average of $\$ 4,300$.

The average tuition and fees for undergraduates enrolled full time for a full academic year in 1995-96 were about $\$ 1,400$ at public 2 -year institutions (including community colleges), $\$ 3,800$ at public 4 -year colleges and universities, $\$ 12,600$ at private, not-for-profit 4 -year colleges and universities, and $\$ 6,900$ at private, for-profit institutions. For full-time, full-year undergraduates, the average price of attendance (student budget), which includes room and board and other educational expenses in addition to tuition, ranged from $\$ 7,300$ at public 2-year institutions to $\$ 19,400$ at private, not-for-profit colleges and universities (figure 2 ). More than 60 percent of all undergraduates were enrolled part time or for only part of an academic year; thus, their tuition and other expenses were less than these full-time, full-year amounts.

Students were more likely to take out loans when their tuition and other educational expenses were high (figure 3). They were less likely to borrow when their family incomes were high. However, middle- and low-income dependent students-students whose parental income and assets are also considered in determining financial need-borrowed at about the same rates (figures 4 and 11).

Almost all of the undergraduate borrowers took out federal Stafford loans (subsidized or unsubsidized) through the Federal Family Education Loan (FFEL) Program or the Ford Direct Loan Program (figure 5). Subsidized loans are based on student financial need, while unsubsidized loans are available to students at all income levels. Most low-income dependent borrowers took out only subsidized loans; about one-half of the high-income dependent borrowers qualified only for unsubsidized loans. Nearly one-half of independent student borrowers at all income lev-
els took out both subsidized and unsubsidized loans, with an average loan total of \$6,300 (figure 6).

Among all undergraduates, 6 percent of those attending public 2-year institutions took out student loans in 1995-96, followed by 36 percent at public 4 -year, 45 percent at private, not-forprofit 4 -year, and 56 percent at private, for-profit institutions (figure 7). Among full-time, fullyear undergraduates, the percentage of students borrowing was higher: 16 percent at public 2year, 45 percent at public 4 -year, 57 percent at private, not-for-profit 4 -year, and 68 percent at private, for-profit institutions (figure 8).

One out of two full-time, full-year undergraduates attending public 2-year institutions received financial aid in 1995-96, with an average total aid package of $\$ 3$, 100 (figure 9). Two out of three full-time, full-year undergraduates attending public 4-year institutions received financial aid in 1995-96, with an average total aid package of $\$ 6,000$ (figure 10). Four out of five fulltime, full-year undergraduates attending private, not-for-profit 4-year institutions received financial aid in 1995-96, with an average total aid package of $\$ 10,900$ (figure 12). About three out of four full-time, full-year students at private, not-for-profit 4-year institutions received grants or scholarships, with an average value of $\$ 6,600$ (figure 8 ).

Although only 6 percent of undergraduates at public 2-year institutions took out a student loan in 1995-96, about 21 percent received a federal loan at some time, and the cumulative total federal loan amount averaged $\$ 4,600$ (figure 9). Among graduating seniors at public 4 -year institutions, 52 percent received a federal loan at some time as an undergraduate, and the average cumulative federal loan amount was $\$ 11,800$. Among graduating seniors at private, not-for-profit 4-year institutions, 57 percent had obtained a federal loan at some time, and the average cumulative federal loan amount was $\$ 14,100$.

## Foreword

The National Postsecondary Student Aid Study of 1996 (NPSAS:96) is the fourth in a series of large-scale data collections sponsored by the National Center for Education Statistics that provide detailed information on how students and their families pay for postsecondary education. This report describes the financing of undergraduate education in 1995-96, with a particular focus on student loans and other types of financial aid. Other studies based on NPSAS:96 are available that provide a general profile of all undergraduates, a profile of students beginning postsecondary education for the first time, and a description of student financing of graduate and first-professional education. These reports and more information about the NPSAS surveys are available on the NCES website: http://nces.ed.gov/npsas.

This report begins with an essay that describes the role of student loans within the context of tuition, the total price of attendance, and the other financial aid available to undergraduates in 1995-96. In addition to the amounts borrowed by students for the 1995-96 academic year, the essay includes information on the cumulative amount of federal loans borrowed by students throughout their undergraduate education. The essay also provides separate profiles of student borrowing and financial aid for each of the four major types of institutions.

The essay is followed by a compendium of tables that describe more detailed information on student loans, tuition and the price of attendance, financial aid, net price of education and need, and general background characteristics of undergraduates.

The estimates presented in this report were produced using the NPSAS:96 Data Analysis System (DAS). The DAS is a microcomputer application that allows users to specify and generate their own tables from the NPSAS: 96 data, and it is available for public use through the NCES website. The DAS produces design-adjusted standard errors used to test the statistical significance of differences between selected estimates shown in the tables. Additional information about the DAS may be found in appendix B of this report and on the NCES website at http://nces.ed.gov/das.

## Acknowledgments

We would like to thank all of those who contributed to the production of this report. At MPR Associates, Robert Fitzgerald assisted with the analysis; Helen Jang ran the tables and prepared the graphics; Andrea Livingston and Karyn Madden edited and proofread the report; Francesca Tussing and Mary Mack formatted the tables and assembled the final report; and Barbara Kridl supervised the production.

We would like to thank the project officer, Andrew Malizio, for his insightful guidance at all stages of the project, and Dennis Carroll for his valuable suggestions. We would also like to acknowledge the careful review and comments of the following reviewers: Ellen Bradburn from the Education Statistics Services Institute; Robert Burton, Claire Geddes, and Susan Broyles at NCES; David Bergeron from the Office of Postsecondary Education; Jacqueline King from the American Council on Education; Kent Phillippe of the American Association of Community Colleges; and Kenneth Redd from Sallie Mae.

## Student Loans

## Introduction

The federal student loan programs provide one of the major sources of financial aid for students in postsecondary education. During the 1995-96 academic year, undergraduates received approximately $\$ 19$ billion through the federal student loan programs, compared to about $\$ 6$ billion in federal grants and about $\$ 1$ billion in federal work-study funds. ${ }^{1}$

Although student loans have represented the largest proportion of federal student aid funds for many years, there was a substantial increase in the amount borrowed through the federal programs beginning with the 1993-94 academic year. ${ }^{2}$ This increase reflected several changes in the student loan programs introduced in the 1992 Reauthorization of the Higher Education Act. One of the major changes was to establish a federal program of unsubsidized loans for dependent students. Students are charged interest on unsubsidized loans while they are enrolled, but unsubsidized loans are available to students at all income levels without a need test. A second change was to raise the annual limits on the amount that may be borrowed for all students who had completed the first year of study, and to increase the cumulative total amount that may be borrowed for an undergraduate education.

These changes opened the student loan programs to more students and made it possible for them to borrow larger amounts. In the 1992-93 academic year, the last year before the 1992 Reauthorization changes went into effect, one-fifth ( 20 percent) of all undergraduates took out a student loan, borrowing an average of $\$ 3,300 .{ }^{3}$ In 1995-96, after the Reauthorization changes, one-fourth ( 26 percent) of all undergraduates took out a student loan, borrowing an average of $\$ 4,100 .{ }^{4}$

The role of student loans in financing undergraduate education is best understood in the context of the general principles by which financial aid is awarded to students. Need for financial

[^0]aid is determined by comparing the student's ability to pay to the amount of the typical student expense budget at the postsecondary institution. The need for financial aid increases as the student budget increases, and, in general, need decreases at higher family income levels. Financial aid is generally awarded in "packages" that include grants and loans. If the available grant aid is not sufficient to meet the student's need, the package may include subsidized loans to cover the need. If that is still not sufficient, the package may also include unsubsidized loans. Such unsubsidized loans are also available to students or parents who have no need, but want to borrow to reduce their current outlays for educational expenses.

The federal government is the major source of student loans: 99 percent of the undergraduates who took out student loans in 1995-96 borrowed through federal programs. ${ }^{5}$ The sources for grant aid are more diverse. Among all students, 22 percent received federal grants; 11 percent received state grants; and 14 percent received grants from the institution they attended. ${ }^{6}$

This report begins with a brief overview of how financial aid was distributed in 1995-96, followed by a discussion of tuition levels and student expense budgets, and the distribution of loans and financial aid by family income levels. This is followed by a more detailed description of the federal student loan programs, and the frequency with which students borrow from one or more of these programs. The final section examines the amount of student borrowing in 1995-96 and the cumulative total amount of federal loans ever borrowed according to type of institution attended.

## Financial Aid in 1995-96

During the 1995-96 academic year, one-half of the undergraduates enrolled in postsecondary education received financial aid through programs funded by the federal government, the states, the postsecondary institutions themselves, or other organizations. The average amount of aid, for those who received aid, was about $\$ 4,900$ (figure 1).

The proportions of undergraduates receiving various types of aid and the average amount received are shown in figure 1 . Grants were awarded to 39 percent of all undergraduates; 26 percent received student loans; 5 percent held subsidized work-study jobs; and 7 percent received other types of aid such as veterans' benefits, job training, or federal PLUS loans to parents. ${ }^{7}$ The average amount of grant aid was $\$ 2,700$; the average student loan was $\$ 4,100$; and those with

[^1]Figure 1—Percentage distribution of undergraduates according to aid package, percentage receiving different types of aid, and average amount of aid: 1995-96

ALL UNDERGRADUATES

| Aid type | Percent | Average |
| :--- | :---: | :--- |
| Grants | 39 | $\$ 2,700$ |
| Loans | 26 | $\$ 4,100$ |
| Work-study | 5 | $\$ 1,400$ |
| Other | 7 | $\$ 3,700$ |

FULL-TIME, FULL-YEAR UNDERGRADUATES*

| Aid type | Percent | Average |
| :--- | :---: | :--- |
| Grants | 54 | $\$ 3,900$ |
| Loans | 44 | $\$ 4,300$ |
| Work-study | 11 | $\$ 1,400$ |
| Other | 11 | $\$ 4,900$ |
| Any aid | 68 | $\$ 6,800$ |

*This represents 38 percent of all undergraduates.
NOTE: Based on Compendium tables 1.1a, 1.2a, 3.1a, and 3.1b. "Loans" only include loans to students. Parent PLUS loans are categorized as "other aid."

work-study jobs earned an average of $\$ 1,400$. A larger proportion of undergraduates received grants than student loans, but the average amount of the loans was greater than the average grant amount. Compared to grants and loans, work-study represented a smaller award amount and was received by a relatively small percentage of students.

The proportions of students receiving various aid packages are also shown in figure 1 . Onefourth ( 24 percent) of all undergraduates received aid, but did not take out a student loan; their average award amount was $\$ 2,400$. Seven percent took out student loans and received no other type of aid; their average loan amount was $\$ 4,100$. Nineteen percent received a combination of loans, grants, and other types of aid; they received an average total financial aid package of $\$ 8,400$. That is, about three out of four borrowers received grants or other aid in addition to their student loans, and their total aid amount was larger than the amount for both those who did not borrow at all and those who borrowed but received no other type of aid.

Students may attend classes at their institution full time or part time, and they may be enrolled for a full academic year or for only part of an academic year. ${ }^{8}$ The attendance patterns vary by type of institution. At 4-year colleges and universities, the majority of students are enrolled full time for a full academic year. At public 2 -year colleges, 17 percent of the students are enrolled full time, full year; most of the students are enrolled part time or for only part of an academic year. ${ }^{9}$ For many comparisons, it is useful to focus only on the full-time, full-year students at the different types of institutions. In total, 38 percent of the undergraduates in 1995-96 were enrolled full time, full year. Two-thirds (68 percent) of them received financial aid; 44 percent of them took out student loans, borrowing an average of \$4,300 (figure 1).

## Tuition and the Price of Attendance

The basic charges for instruction at postsecondary institutions are the tuition and fees. The average tuition and fees for undergraduates enrolled full time for a full academic year in 1995-96 were about $\$ 1,400$ at public 2 -year institutions, $\$ 3,800$ at public 4 -year institutions, $\$ 12,600$ at private, not-for-profit 4-year colleges and universities, and \$6,900 at private, for-profit institutions (figure 2). ${ }^{10}$ More than half of all undergraduates were enrolled part time or for only part of an academic year, ${ }^{11}$ and were charged less than these full-time, full-year tuition amounts.

[^2]Figure 2-Average tuition, non-tuition, and total price of attendance for undergraduates, by type of institution attended and attendance pattern: 1995-96

FULL-TIME, FULL-YEAR STUDENTS

## PART-TIME OR PART-YEAR STUDENTS

NOTE: Based on Compendium table 1.9. Non-tuition expenses are based on institutional student budget estimates and include room and board, books and supplies, transportation, and personal expenses while enrolled. Amounts may not sum to totals due to rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995-96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

Tuition and fees are only part of the educational expenses for students. Non-tuition expenses include books and supplies and other living expenses directly related to attendance, such as room and board, transportation, and personal expenses. The non-tuition expenses used in this report are based on the student budgets prepared by financial aid offices at postsecondary institutions to estimate the typical expenses for students in a variety of circumstances, taking into account their dependency status and the type and location of housing. The average non-tuition expenses for full-time, full-year students were estimated to be about $\$ 6,000$ at community colleges and about \$7,000 at the other types of institutions (figure 2).

The total student expense budget may also be called the "price of attendance," ${ }^{12}$ and represents the sum of the tuition and fees charged and the estimated non-tuition expenses. The average price of attendance or student budget for full-time, full-year undergraduates ranged from \$7,300 at public 2 -year colleges to $\$ 19,400$ at private, not-for-profit 4 -year institutions (figure 2 ). It should be stressed that these are the estimated expenses for the student, and not the amounts charged by the institutions. Unless students live on campus ${ }^{13}$ and receive room and board, the tuition and fees are the only portion of the price of attendance that is paid to the institution attended. The average price of attendance for part-time, part-year students at the same type of institution is normally lower. ${ }^{14}$

## Loans, Price of Attendance, and Income

Whether undergraduates take out student loans is related to both their price of attendance and their family income. The percentage of students taking out loans and the average loan amount were directly related to their price of attendance (figure 3). Among undergraduates with an annual price of attendance of $\$ 8,000$ or more (about three-fourths of all full-time, full-year students), ${ }^{15}$ nearly one-half ( 47 percent) took out a student loan in 1995-96, borrowing an average amount of $\$ 4,600$. Among those with a price of attendance between $\$ 4,000$ and $\$ 7,999$, about one-fifth ( 18 percent) borrowed an average of $\$ 2,700$. Among those with a price of attendance of less than $\$ 4,000$, who were nearly all part-time students, ${ }^{16} 2$ percent took out a student loan, borrowing an average of $\$ 1,600$.

NOTE: Based on Compendium tables 1.1.a and 1.2a. Price of attendance is based on institutional student budgets, which include tuition and estimated non-tuition expenses. "Loans" only include loans to students. Parent PLUS loans are categorized as "other aid."

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995-96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

About half of the undergraduates were financially dependent on their parents as defined by federal financial aid criteria. ${ }^{17}$ According to these criteria, undergraduates younger than age 24 are assumed to be dependent unless they are married, have dependents of their own, or are veterans or orphans. All students age 24 or older are considered to be financially independent of their parents. For dependent students, parents' income is used in determining the financial aid need of the student; for independents, only the student's own income (and spouse's, if married) is considered. In this report, low income for dependent students is defined as less than $\$ 25,000$, middle

[^4]income as $\$ 25,000-\$ 70,000$, and high income as over $\$ 70,000$. For independent students, low income is defined as less than $\$ 10,000$, middle income as $\$ 10,000-\$ 35,000$, and high income as over $\$ 35,000$.

High-income students were less likely to take out a student loan than low-income students, both among dependents and independents (figure 4). However, dependent students from lowincome and from middle-income families borrowed at about the same rates. Among those who borrowed, high-income dependent students took out somewhat larger loans than low-income dependent students, but the difference was relatively small (\$3,500 compared to \$3,800). ${ }^{18}$ At all income levels, independent students borrowed about $\$ 1,000$ more than dependent students.

Figure 4-Percentage of dependent and independent undergraduates receiving any aid and any loans, by family income: 1995-96

NOTE: Based on Compendium tables 1.1a and 1.2a. Percentages may not sum to total percentage aided due to rounding. Middle-income range for parents of dependent students is $\$ 25,000-70,000$; middle income for independent students is $\$ 10,000-35,000$. "Loans" only include loans to students. Parent PLUS loans are categorized as "other aid."

[^5]
## The Federal Student Loan Programs

Students were more likely to borrow when their expenses were high; they were less likely to borrow when their family incomes were high. How much they borrowed, however, appears to be primarily related to their price of attendance rather than their family income. ${ }^{19}$ The amounts of the average loans also reflect the statutes governing the federal student loan programs. These statutes set limits on the amount that may be borrowed annually and cumulatively depending on the price of attendance, financial aid need, the student's dependency status, the student's class level, and whether they are enrolled for a full academic year.

Nearly all (99 percent) of the undergraduates who took out student loans in 1995-96 borrowed through one of the federal student loan programs. ${ }^{20}$ There are a variety of federal student loan programs, and students may borrow from more than one of them at the same time. Nearly all (96 percent) of the undergraduates who took out loans in 1995-96 borrowed federal Stafford loans (subsidized or unsubsidized) through the Federal Family Education Loan (FFEL) Program or the Ford Direct Loan Program. In addition, about 15 percent of the students who borrowed were awarded federal Perkins loans, and 9 percent of the parents of student borrowers received federal PLUS loans. Perkins and PLUS loans were usually received in combination with Stafford loans (figure 5).

Although administered differently, both the FFEL and the Direct Loan programs provide the same type of loans to students and to their parents. A major difference between the two programs is that the loan funds for the FFEL program are provided by banks and other lenders, while the loan funds for the Direct Loan program come directly from the federal government. In the FFEL program, the federal government guarantees the loans (that is, insures them against default) through state guaranty agencies; in the Direct Loan program, the loan funds are provided directly by the federal government to educational institutions for their students. In nearly all other respects, the type of loans and the conditions under which they are lent are the same. Both programs provide Stafford loans to students and PLUS loans to the parents of dependent students.

| Perkins loans | $\mathbf{1 5 \%}$ |  | $\$ 1,400$ |
| PLUS loans | $9 \%$ |  | $\$ 5,800$ |

[^7]SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995-96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

There are two types of Stafford loans for students: subsidized and unsubsidized. The subsidized Stafford loans are need based, ${ }^{21}$ and the federal government pays the interest while the student is enrolled. The unsubsidized Stafford loans are not need based, and the student is charged interest while enrolled. Students may receive both types at the same time, but the subsidized amount may not exceed the student's need.

[^8]The rules limiting the maximum amount of Stafford loans that a student may borrow during an academic year are quite complex. The maximum amounts vary by dependency and class level and whether the student qualifies for the need-based subsidized portion of the loans. In general, independent students may borrow more than dependent students, and the loan limits are increased as the student completes a class level. The annual maximum amounts during the 199596 academic year are shown in table 1 . For students enrolled less than a full academic year, these limits were lower. A student enrolled for only one semester could only borrow half of these amounts, for example.

Table 1—Annual maximum amounts of federal Stafford loans for 1995-96 undergraduates

SOURCE: U.S. Department of Education, The Student Guide to Financial Aid, 1995-96.

For dependent students, the total annual maximum amount was always the same within a class level, whether the student received a subsidized loan, an unsubsidized loan, or a combination of both. For example, first-year dependent students were limited to $\$ 2,625$, whether the amount was totally subsidized or totally unsubsidized. Independent students, on the other hand, could borrow up to the sum of the subsidized and unsubsidized maximum. For example, firstyear independent students with need could borrow a subsidized amount up to $\$ 2,625$ plus an additional unsubsidized $\$ 4,000$, for a total Stafford loan of $\$ 6,625$. About one-half of the dependent borrowers took out loans for the maximum amount (from $\$ 2,625$ to $\$ 5,500$ depending on class level). ${ }^{22}$ Among independent borrowers, who could take out much larger loans (from $\$ 6,625$ to $\$ 10,500$ depending on class level and need), 13 percent borrowed the maximum amounts. ${ }^{23}$

The proportion of Stafford loan borrowers who took out subsidized loans, unsubsidized loans, or both varied by dependency and income level (figure 6). Among dependent student

[^9]Figure 6-Percentage distribution of Stafford loan borrowers with subsidized or unsubsidized loans according to Stafford combination, by dependency and income: 1995-96

Percent of borrowers

| Average amounts: |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Stafford loan | \$3,300 | \$3,500 | \$3,600 | \$4,500 | \$4,700 | \$4,800 |
| Unsubsidized only | \$3,100 | \$3,000 | \$3,500 | \$2,600 | \$3,300 | \$3,700 |
| Both | \$5,200 | \$4,600 | \$4,500 | \$6,200 | \$6,300 | \$6,500 |
| Subsidized only | \$3,100 | \$3,300 | \$3,400 | \$3,100 | \$3,000 | \$3,300 |

NOTE: Based on Compendium table 1.7. Middle-income range for parents of dependent students is $\$ 25,000-70,000$; middleincome for independent students is $\$ 10,000-35,000$. Detail may not sum to totals due to rounding.
SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995-96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.
borrowers, nearly all of the low-income students ( 97 percent), most of the middle-income students ( 88 percent), and about one-half of the high-income students ( 47 percent) qualified for the subsidized loans. Among the independent student borrowers, nearly all ( 96 to 97 percent) of the low- and middle-income and 71 percent of the high-income students qualified for the subsidized loans. Dependent borrowers were less likely to take out both subsidized and unsubsidized loans
than independent borrowers at all income levels. Among all dependent borrowers, 15 percent obtained both subsidized and unsubsidized loans with an average amount of \$4,700; among independent student borrowers, nearly one-half (47 percent) obtained both subsidized and unsubsidized loans with an average amount of $\$ 6,300 .{ }^{24}$

PLUS loans to the parents of dependent students are also part of the FFEL and Direct Loan programs, although they are not "student" loans. The rationale for the differences in the maximum Stafford student loan amounts by dependency status is that if a dependent student needs more loan aid, the additional amounts may be borrowed by the parents through a federal PLUS loan, while independent students are not expected to be able to rely on such parental support.

The interest on PLUS loans is not subsidized; they are not need based; and the parents must demonstrate a good credit history in order to qualify. The amount of an annual PLUS loan is only limited to the price of attendance minus any other financial aid, so the loans may be quite large. The average PLUS loan in 1995-96 was about $\$ 5,900$. PLUS loans were usually taken by parents to supplement Stafford loans to the students (figure 5). Since the focus of this report is on borrowing by students, PLUS loans have not been included in the percentages or averages in the rest of this report.

Federal Perkins loans to students are not a part of the FFEL and Direct Loan programs. The funds for this program are allocated to the institutions, which have some discretion in awarding the loans to individual students. Perkins loans are need based and interest free while the student is enrolled, and have lower interest rates than Stafford loans. However, the amount available to students is limited by the allocation to the institution, while the amounts borrowed through the FFEL or Direct Loan programs are not. Among all federal loan borrowers in 1995-96, 15 percent received a Perkins loan with an average amount of $\$ 1,400$. Perkins loans were often awarded to students who also had Stafford loans, however. The 11 percent of borrowers who had both Perkins and Stafford loans (but not PLUS loans) had an average loan amount of \$5,400 (figure 5). About 1 percent of the borrowers received Perkins and Stafford loans, and their parents also took out a PLUS loan; the average amount of all three loans was $\$ 10,400$ (figure 5).

[^10]
## Student Borrowing at Different Types of Institutions

There were substantial differences in the average tuition and price of attendance for fulltime, full-year students by the type of institution attended. There were also differences in the price of attendance between full-time, full-year students and those enrolled part time or for a part year within the same type of institution, as shown in figure 2 . The differences in the price of attendance are reflected in the proportions of undergraduates taking out student loans, receiving grants, and receiving any type of financial aid. Figure 7 shows these proportions for all undergraduates, and figure 8 for only full-time, full-year undergraduates, who have the highest average price of attendance.

At public 2-year institutions, 6 percent of all undergraduates took out loans in 1995-96, followed by 36 percent at public 4 -year, 45 percent at private, not-for-profit 4 -year, and 56 percent at private, for-profit institutions (figure 7). Among full-time, full-year undergraduates, the percentage of students borrowing was higher: 16 percent at public 2 -year, 45 percent at public 4 year, 57 percent at private, not-for-profit 4-year, and 68 percent at private, for-profit institutions (figure 8).

The percentage of students taking out loans and the amount of the loans in 1995-96 give only a partial picture of student borrowing. Except for those beginning postsecondary education for the first time (about 16 percent of the total), ${ }^{25}$ most undergraduates enrolled in 1995-96 had also attended in prior years and may have borrowed previously. In general, the cumulative total amount borrowed as an undergraduate may be expected to increase as the student progresses through college. Most college seniors, for example, could have taken out student loans for four years. The description of the student borrowing patterns within each type of institution will also show the cumulative total amount that students had borrowed through the federal loan programs through the 1995-96 academic year. ${ }^{26}$

In addition to differences in the price of attendance, borrowing patterns reflect variations in the characteristics of students attending the different types of institutions, such as dependency, family income, and full- or part-time enrollment. The percentage distribution of the students within each type of institution according to these characteristics is shown in table 2.

## Public 2-Year Institutions

Public 2-year institutions, usually called community colleges, enrolled 43 percent of all undergraduates in 1995-96, more than any other type of institution. ${ }^{27}$ The majority of these students ( 83 percent), however, were enrolled part time or for less than a full academic year; 17 percent were enrolled full time for a full academic year (figure 9).

The average full-time, full-year tuition and fees at public 2-year institutions in 1995-96 were $\$ 1,400$. The average tuition and fees for the 83 percent of public 2-year students who did not enroll full time for a full academic year were about $\$ 500$. About one-half ( 53 percent) of all the students at public 2-year institutions had a price of attendance under $\$ 4,000 ; 10$ percent had a price of attendance over $\$ 8,000$ (table 2).

The relatively low tuition and the high proportion of part-time students are reflected in the relatively low percentage of students who took out loans in 1995-96. Six percent of the community college students borrowed in 1995-96, while 27 percent received a financial aid package without loans (figure 9). About 31 percent of the students were enrolled less than half time, and were therefore not eligible for the federal loan programs. ${ }^{28}$ Among the students enrolled full time for the full academic year, about one-half received financial aid, and 16 percent took out a student loan. Independent students were more likely to borrow than dependent students, and the independent students also borrowed larger loan amounts. One-fourth ( 24 percent) of full-time, fullyear independent students borrowed an average of $\$ 3,600$, compared to 12 percent of dependent students, who borrowed an average of $\$ 2,200 .{ }^{29}$

Because most community college students attend part time, it may take several years for them to complete the coursework for a class level, and they may take out loans during more than one academic year to do this. Although only 6 percent of public 2-year undergraduates took out a student loan in 1995-96, about one-fifth (21 percent) had borrowed a federal loan at some time, and the cumulative total federal loan amount averaged \$4,600 (figure 9).

Among students in the first class level at community colleges, 18 percent had received a federal loan at some time, with an average cumulative total of $\$ 4,200$. Among second-year students, one-fourth ( 26 percent) had received federal loans, with an average total of $\$ 5,000$. These students did not necessarily borrow all of this to attend a community college, since some of the

students may have borrowed previously to attend a 4-year college and then transferred to a lower tuition public 2-year college.

## Public 4-Year Institutions

The public 4-year colleges and universities enrolled 30 percent of all undergraduates and 45 percent of all full-time, full-year undergraduates in 1995-96. ${ }^{30}$ Almost two-thirds ( 63 percent) of the undergraduates were dependent, and more than one-half ( 57 percent) were enrolled full time for the full academic year. Among full-time, full-year students at public 4-year institutions, 80 percent were dependent (table 2).

The average tuition and fees for full-time, full-year undergraduates attending public 4-year institutions in 1995-96 were $\$ 3,800$, and the average total price of attendance was $\$ 10,900$ (figure 10). Two-thirds ( 66 percent) of these undergraduates received financial aid, with an average amount of $\$ 6,000$. Almost one-half ( 45 percent) of the full-time, full-year undergraduates took out a student loan, borrowing an average of $\$ 4,400$.

About one-fifth ( 22 percent) of the full-time, full-year undergraduates received financial aid without taking out a loan. Their average aid amount was $\$ 3,600$. One-third ( 34 percent) of the full-time, full-year students received a financial aid package that included loans and other aid; these students received an average of $\$ 8,100$ in total aid.

Among the full-time, full-year dependent students in public 4-year institutions, about onehalf of both low-income ( 51 percent) and middle-income ( 47 percent) students took out loans in 1995-96 (figure 11). However, 81 percent of the low-income students received grants, compared to 45 percent of the middle-income students, and the average grant amount received by lowincome students was larger than that received by the middle-income students ( $\$ 3,900$ versus $\$ 2,500) .{ }^{31}$

Nearly one-half (47 percent) of the undergraduates in public 4-year colleges and universities had taken out a federal student loan at some time, and their average cumulative loan totaled $\$ 7,900$ (figure 10). The cumulative total loan amounts increased by class level. Among the students still in their first year, 41 percent had taken out a federal loan, with an average total of $\$ 3,500$. Among those identified as graduating seniors, 52 percent had taken out a federal loan at some time, and the average cumulative total federal loan amount was $\$ 11,800$.

## Private, Not-for-Profit 4-Year Institutions

The private, not-for-profit 4-year colleges and universities enrolled 14 percent of all undergraduates, about half as many as the public 4 -year institutions. ${ }^{32}$ About two-thirds ( 65 percent) of the students were dependent, and 61 percent were enrolled full time for the full academic year. Among full-time, full-year students, 84 percent were dependent (table 2).

The average tuition and fees of full-time, full-year undergraduates at private, not-for-profit 4-year institutions in 1995-96 were \$12,600, and the average total price of attendance was $\$ 19,400$ (figure 12). The large proportion of undergraduates who received financial aid reflects these relatively high levels of tuition and student budgets. Eighty percent of the full-time, fullyear undergraduates received financial aid, with an average total aid package of $\$ 10,900$. About three-fourths ( 72 percent) of the full-time, full-year students received grants, with an average value of $\$ 6,600$, and one-fourth ( 26 percent) of the full-time, full-year students held a work-study job, earning an average of $\$ 1,400 .{ }^{33}$

More than half ( 57 percent) of those enrolled full time, full year took out a student loan in 1995-96, borrowing an average of $\$ 4,700$ (figure 12). One-fourth ( 24 percent) of these undergraduates received an aid package that did not include loans; the average amount of their aid was $\$ 6,700$. One-half ( 52 percent) received a financial aid package that did include loans and other aid, averaging \$13,300.

Among full-time, full-year dependent students, two-thirds of both low-income and middleincome students took out loans, and their average loan amounts were similar (\$4,300-\$4,400) (figure 11). Ninety percent of low-income full-time, full-year dependent students received financial aid at private, not-for-profit 4-year institutions, with an average total aid package of \$12,100. About the same percentage ( 88 percent) of middle-income dependent students received financial aid, with a similar total aid amount $(\$ 11,700)$. Eighty percent or more of both middle- and lowincome dependent full-time, full-year students received grants, with an average value of \$7,100 to $\$ 8,100 .{ }^{34}$

Slightly more than one-half (54 percent) of the undergraduates in private, not-for-profit 4year colleges and universities had taken out a federal student loan at some time, borrowing a total cumulative loan average of $\$ 8,700$ (figure 12). Among first-year students, one-half ( 50 percent)

CUMULATIVE FEDERAL LOAN BORROWING THROUGH 1995-96

FEDERAL LOANS

| Class <br> level | Ever <br> borrowed | Cumulative <br> amount |
| :--- | :---: | :---: |
| First-year | $50 \%$ | $\$ 4,000$ |
| Second-year | $53 \%$ | $\$ 6,900$ |
| Third-year | $58 \%$ | $\$ 9,900$ |
| Fourth-year <br> or more | $56 \%$ | $\$ 13,200$ |
| Graduating <br> seniors | $57 \%$ | $\$ 14,100$ |

[^15]had taken out a federal loan, with a total cumulative average of $\$ 4,000$. Among graduating seniors, 57 percent had taken out a federal loan at some time, and the average total amount borrowed was $\$ 14,100$. Among the graduating seniors who had borrowed at some time, two-thirds had taken out federal loans during three or more years of their undergraduate education. ${ }^{35}$

## Private, for-Profit Institutions

The private, for-profit institutions enrolled 5 percent of all undergraduates. ${ }^{36}$ Primarily they offered vocational certificate and associate's degree programs. Many of the vocational certificate programs may be completed in less than a full academic year if the students are enrolled full time. In the private, for-profit institutions, the proportion of students enrolled full time for less than a full academic year was similar to the proportion enrolled full time for a full academic year. ${ }^{37}$

The average tuition and fees for full-time, full-year students at private, for-profit institutions were $\$ 6,900$, which was higher than the average at public 4 -year institutions $(\$ 3,800)$, but lower than the average at private, not-for-profit 4 -year institutions $(\$ 12,600)$. The average price of attendance for full-time, full-year students was $\$ 14,100$, and for those attending part time or part year, it was $\$ 8,600$ (figure 13).

Almost three-fourths ( 71 percent) of the students in private, for-profit institutions were independent, and 44 percent of these students had incomes of less than $\$ 10,000$. Among the dependent students attending private, for-profit institutions, 42 percent came from families with incomes under $\$ 25,000$, which was a larger percentage of low-income students than that in either public 2-year or 4-year institutions (table 2).

The combination of tuition levels that were higher than those in public institutions, and income distributions that were lower than both those in public 2-year and 4-year institutions, resulted in a higher proportion of students qualifying for need-based financial aid (86 percent) at private, for-profit institutions than at the other types of institutions. ${ }^{38}$ Three-fourths ( 77 percent) of all the students received financial aid, and about one-half ( 56 percent) took out a student loan, borrowing an average amount of $\$ 4,100$. Among the full-time, full-year students, two-thirds ( 68 percent) took out student loans, borrowing an average amount of \$4,800 (figure 13).

SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995-96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

At for-profit institutions, nearly two-thirds of first- and second-year students had obtained a federal loan either in 1995-96 or in prior years. The cumulative average federal loan amount for first-year students was $\$ 4,400$; for second-year students (11 percent of the total), ${ }^{39}$ it was $\$ 9,200$.

[^17]
## Summary

#### Abstract

About one-fourth of all undergraduates took out a student loan in 1995-96, borrowing an average of $\$ 4,100$. Most students who took out loans also received grants or other types of aid. Relatively few students at community colleges ( 6 percent of those enrolled) took out student loans in 1995-96 because tuition was low and most students enrolled part time. However, 36 percent of students attending public 4-year institutions had taken out student loans, 45 percent at private, not-for-profit 4 -year institutions, and 56 percent at private, for-profit institutions. The proportion of students with loans increased when tuition and total price of attendance increased. Low- and middle-income dependent students borrowed at about the same rates, while upperincome students borrowed at lower rates.

Nearly all of those with student loans in 1995-96 had taken out federal subsidized or unsubsidized Stafford loans through the FFEL or Direct Loan programs. The subsidized loans are need based, while the unsubsidized loans are available to students at all income levels without a need test. Most low-income dependent borrowers took out only subsidized loans; about one-half of the high-income dependent borrowers qualified only for unsubsidized loans. Nearly one-half of independent student borrowers at all income levels took out both subsidized and unsubsidized loans, with an average loan of $\$ 6,300$.

The maximum amounts of Stafford loans that students may borrow during an academic year vary by class level and dependency. The annual loan limits for Stafford loans are much higher for independent than for dependent students. About half of the dependent students with loans borrowed the maximum amount, compared to 13 percent of the independent students, who could borrow at least twice as much as dependent students.

The proportion of students who ever took out a federal loan is higher than the proportion who borrowed in a given academic year, and the cumulative amount borrowed increases as the student progresses through college. Among 4-year college seniors in 1995-96, about one-half had borrowed through the federal student loan programs. The cumulative federal student loan amount for graduating seniors at public 4 -year colleges and universities was almost $\$ 12,000$; graduating seniors at private, not-for-profit institutions had borrowed about $\$ 14,000$. At current student-loan interest rates (about 8 percent), it would require average monthly payments of ap-
proximately $\$ 150$ to $\$ 175$ over a period of 10 years to repay the average cumulative amount of federal loans borrowed by graduating college seniors through 1995-96.40

## Section 2: Tuition and Price of Attendance

- In addition to tuition, which is the basic charge for instruction, postsecondary institutions often require the payment of fees for some services that are not covered by tuition. The average tuition and fees for all students were $\$ 600$ at public 2-year, $\$ 3,200$ at public 4 -year doctorate-granting institutions, and $\$ 11,900$ at private, not-for-profit doctorate-granting institutions (table 2.2a).
- For full-time, full-year students, the average tuition and fees were $\$ 1,400$ at public 2year, $\$ 4,100$ at public 4 -year doctorate-granting, and $\$ 15,600$ at private, not-for-profit doctorate-granting institutions (table 2.2 b ).
- For students who attended part time or part year (less than 8 months), the average tuition and fees were $\$ 500$ at public 2-year, $\$ 1,800$ at public 4 -year doctorate-granting, and $\$ 5,400$ at private, not-for-profit doctorate-granting institutions (table 2.2c).
- Eleven percent of all undergraduates (full-time and part-time) were charged $\$ 8,000$ or more for tuition and fees; 31 percent were charged less than $\$ 500$. Among full-time, full-year students, however, one-fourth ( 25 percent) were charged $\$ 8,000$ or more for tuition and fees, and 4 percent were charged less than $\$ 500$ (table 2.2d).
- Tuition and fees are only part of the educational expenses for students. Postsecondary institutions prepare typical student budgets, which are used to estimate the student's total price of attendance. The price of attendance consists of two major portions: tuition and fees, and all other non-tuition expenses. Non-tuition expenses include books and supplies and other living expenses directly related to attendance, such as room and board, transportation, and personal expenses. The non-tuition expenses are not usually paid to the institution attended unless the student lives on campus and pays room and board. The full-time, full-year price of attendance is prorated to estimate the price for part-time and part-year students. For example, at public 2-year institutions, the average estimated price of attendance for full-time, full-year students was $\$ 7,300$, compared to $\$ 1,500$ for part-time, part-year students (table 2.1a). The 1995-96 price of attendance, which is based on institutional estimates of student budgets, is not strictly comparable to the 1992-93 student-reported educational price estimates published in the NPSAS:93 descriptive report. The non-tuition expenses on student-reported estimates for 1992-93 averaged about $\$ 500$ higher than the average non-tuition price estimated by institutions in the 1995-96 student budgets.
- Among dependent students, the average price of attendance was positively correlated with family income. For example, the average price of attendance for dependent students with family incomes of less than $\$ 20,000$ was $\$ 8,600$; for dependent students with family incomes of $\$ 100,000$ or more, the average price was $\$ 12,300$ (table 2.1a).

In part, this reflected the attendance patterns of dependent students, who were more likely to be enrolled full time, full year as family income increased (see table 5.1b).

- Among independent students, the average price of attendance decreased as family income increased (table 2.1a). This partly reflected the attendance patterns of independent students, who were less likely to be enrolled full time, full year as family income increased (see table 5.1b).
- Among full-time, full-year students, there was a positive correlation between family income and average price of attendance for dependent students, and no correlation between family income and price of attendance among independent students (table 2.1b).
- The average price of attendance for full-time, full-year undergraduates enrolled in 4year institutions in 1995-96 ranged from \$9,800 at public nondoctorate-granting institutions to $\$ 23,400$ at private, not-for-profit doctorate-granting institutions (table 2.1b).
- In 1995-96, 31 percent of all undergraduates had a price of attendance of less than $\$ 4,000$, and 29 percent had a price of attendance between $\$ 4,000$ and $\$ 8,000$. Nine percent had a price of attendance of $\$ 16,000$ or more. Among full-time, full-year students, 23 percent had a price of attendance of $\$ 16,000$ or more, and less than 1 percent had a price of attendance of less than $\$ 4,000$ (table 2.1c).

## Section 3: Financial Aid

## All Types of Aid

- Fifty percent of undergraduate students received some form of financial aid in 1995-96 (table 3.1a).
- The proportion of students receiving any financial aid was directly related to the tuition and fees charged at the institution attended, as well as the students' total price of attendance (table 3.1a).
- Financial aid was received by about one-third of the students in public 2-year institutions, by 55 percent in public 4 -year institutions, and by 71 percent in private, not-forprofit 4-year institutions (table 3.1a).
- A greater proportion of students (39 percent) received grants than loans ( 26 percent). Five percent of students received aid through subsidized work-study jobs (table 3.1a).
- About one-fourth ( 28 percent) of the students at public 2-year institutions received grants, compared to 40 percent at public 4 -year institutions and 61 percent at private, not-for-profit 4-year institutions (table 3.1a).
- At public 2-year institutions, 6 percent of the students took out a student loan in 199596 , compared to 36 percent at public 4 -year institutions, 45 percent at private, not-forprofit 4-year institutions, and 56 percent at private, for-profit institutions (table 3.1a).
- About one-fifth ( 22 percent) of the students attending institutions that charged $\$ 8,000$ or more for tuition and fees held a work-study job (table 3.1a).
- As family income increased, the percentage of students who received any aid decreased. This was true for both dependent and independent students (table 3.1a).
- Approximately two-thirds ( 69 percent) of the students in the lowest income quartile received financial aid, compared to about half ( 48 percent) in the middle quartiles and one-third ( 34 percent) of those in the highest quartiles (table 3.1a).
- Among the aided students, about three-fourths (79 percent) received grants and about half (52 percent) received student loans. Among those who took out student loans, two-thirds ( 69 percent) also received grants (table 3.1a).
- Among dependent students, both the proportion receiving grants and the proportion taking out student loans declined as family income increased. This was also true for independent students (table 3.1a).
- The average amount of financial aid received by aided students in 1995-96 was $\$ 4,900$. The average grant was $\$ 2,700$. Students receiving loans borrowed an average of $\$ 4,100$ (table 3.1b).
- The average amount of financial aid received was directly related to the amount of tuition charged. For example, students charged less than $\$ 500$ in tuition received an average of $\$ 1,050$ in aid, while those charged $\$ 8,000$ or more received an average of $\$ 11,100$ (table 3.1b).
- Although the proportion of dependent students receiving financial aid decreased as income increased (see table 3.1a), the average amount received by aided dependent students was not related to income (table 3.1b). For example, the average amount received by dependent students with family incomes under $\$ 20,000(\$ 5,800)$ was about the same as the average amount received by those with family incomes of $\$ 100,000$ or more ( $\$ 5,500$ ). However, 70 percent of these low-income students received financial aid, compared to 28 percent of these high-income students (table 3.1b).
- Among independent students, the average amount of aid decreased as family income increased. This was primarily due to the decrease in the average amount of grant aid as family income increased; the average amount of loans did not vary directly with income (table 3.1b).

## Federal Aid

- Thirty-six percent of undergraduates received some form of federal aid. Student loans were the most common type of federal aid (received by 25 percent), followed by federal grants (received by 22 percent) (table 3.2a).
- Almost half (48 percent) of the students attending private, for-profit institutions received federal grant aid, compared to about one-fourth ( 24 percent) at private, not-forprofit institutions (table 3.2a).
- Independent students were more likely to receive federal grants ( 25 percent) than were dependent students (19 percent). However, independent students were less likely to receive federal loans ( 21 percent) than dependent students ( 30 percent) (table 3.2a).
- Married independent students without dependents were less likely to receive federal aid than dependent students, unmarried independent students, or independent students with dependents. Dependent students and independent students with dependents were about equally likely to receive federal aid: about 39 percent of students in each category received some kind of federal aid (table 3.2a).
- About half of the students in the lowest family income quartile received federal grants ( 54 percent), and about one-third received federal loans ( 34 percent). About 1 percent of the students in the highest income quartile received federal grant aid, but 14 percent received federal student loans (table 3.2a).
- Among students who received grant aid from any source, somewhat more than half (56 percent) received federal grants. Among those who received student loans from any source, 99 percent received federal loans (table 3.2a).
- The average federal grant amount received by undergraduates in 1995-96 was nearly $\$ 1,700$; the average federal student loan was about $\$ 4,000$; and the average federal work-study amount was about $\$ 1,300$ (table 3.2b).
- The amount of the average federal loan borrowed in 1995-96 was directly related to the price of attendance. Students with price below $\$ 4,000$ borrowed an average federal loan of about $\$ 1,700$, while those with price of $\$ 16,000$ or more borrowed an average federal loan of nearly $\$ 5,000$ (table 3.2b).
- The average federal loan borrowed by independent students in 1995-96 was about $\$ 1,000$ more than that borrowed by dependent students ( $\$ 4,600$ compared to $\$ 3,600$ ). The average federal loan amount did not vary by income level among independent students. Among dependent students, the average amount increased slightly with family income (table 3.2b).
- There was no measurable difference in the average federal loan amount borrowed by students who received grant aid and those who did not ( $\$ 4,080$ compared to $\$ 3,950$ ) (table 3.2b).
- Students at private, for-profit institutions were more likely to receive federal aid than those at public or private, not-for-profit 4-year institutions or those at public 2-year institutions (table 3.2c).
- Among students who received any aid from any source, 72 percent received federal aid. At private, for-profit institutions, 90 percent of aided students received federal aid, compared to 55 percent at public 2-year institutions (table 3.2c).
- The average amount of federal aid received by students who had student loans in 1995-96 was $\$ 5,500$; the average amount of federal aid among students who did not have student loans in 1995-96 was $\$ 1,800$ (table 3.2d).

## State Aid

- State aid was less common than federal aid, and was received by 12 percent of undergraduates. Grants were the most common type of state aid, with 11 percent of undergraduates receiving grants. However, less than 1 percent of students received state loans or state work-study aid (table 3.3a).
- About 2 percent of the undergraduates attending 4-year institutions received state grants or scholarships that were not based on need (table 3.3a).
- The average amount of grant aid received by students who were awarded state grants was \$1,570 (table 3.3b).
- Students attending private, not-for-profit 4-year nondoctorate-granting institutions were more likely than students in any other type of institution to receive state aid. Onequarter of students in private, not-for-profit nondoctorate-granting institutions received such aid (table 3.3c).
- The average amount of state aid for full-time, full-year undergraduates attending public 2-year institutions was about $\$ 1,000$; for full-time, full-year students attending private, not-for-profit 4 -year doctorate-granting institutions, it was about $\$ 2,500$ (table 3.3d).

## Institutional Aid

- Sixteen percent of undergraduate students received aid directly from their institution. Grants were the most common type of institutional aid, and were received by 14 percent of all undergraduates. The average amount of institutional aid received by aided undergraduates was $\$ 2,900$ (tables 3.4 a and 3.4b).
- At private, not-for-profit 4-year institutions, 12 percent of the undergraduates received non-need-based aid from the institutions, compared to 3 percent who received such aid at public 4 -year institutions (table 3.4a).
- At private, not-for-profit 4-year institutions, the average amount of institutional grant aid was almost $\$ 5,000$, compared to $\$ 2,200$ at public 4 -year institutions (table 3.4b).
- About 45 percent of students at private, not-for-profit 4-year nondoctorate-granting institutions and 42 percent of students at private, not-for-profit 4-year doctorate-granting institutions received aid directly from their institutions (table 3.4c).
- Aided undergraduates who attended institutions that charged less than $\$ 500$ in tuition received about $\$ 290$ in institutional aid, while those attending institutions charging $\$ 8,000$ or more received about $\$ 5,900$ (table 3.4 d ).

## Aid Packages

- Among those who received aid, more than one-third (38 percent) of the undergraduates received only grant aid; one-fourth received only grants and loans; and 13 percent received only loans (table 3.5a).
- Students who received a combination of grants, loans, and work-study had an average aid package of $\$ 12,100$, which was the largest aid package of the combinations shown in table 3.5b.

## Aid by Institution Type

- At public 4-year institutions, 66 percent of the full-time, full-year undergraduates received financial aid; 49 percent received grants; and 45 percent received loans (table 3.6a).
- At public 4-year institutions, the average amount of aid received by full-time, full-year undergraduates was $\$ 6,000$, with an average grant of $\$ 3,000$ and an average loan of \$4,400 (table 3.6b).
- At public 2-year institutions, 53 percent of the full-time, full-year students received financial aid: 45 percent received grants, and 16 percent received loans (table 3.7a).
- At public 2-year institutions, the average amount of aid received by full-time, full-year undergraduates was $\$ 3,100$, with an average grant of $\$ 2,000$ and an average loan of \$2,900 (table 3.7b).
- At private, not-for-profit 4-year institutions, 80 percent of full-time, full-year undergraduates received financial aid in 1995-96: 72 percent received grants; and 57 percent received loans (table 3.8a).
- At private, not-for-profit 4-year institutions, the average amount of financial aid received by full-time, full-year students was $\$ 10,900$, averaging $\$ 6,600$ in grants and $\$ 4,700$ in loans (table 3.8b).

## Section 4: Net Price and Need

## Net Price

- The net price of attendance is the student's total price of attendance minus the total amount of financial aid received. It is a measure of the estimated amount that students and their families pay to meet the current year's educational expenses remaining after financial aid, if any. Since student loans must eventually be repaid with interest, it is not a measure of the ultimate price to those students with loans. For students who received no financial aid (about half of the total), the net price is the same as the price of attendance. The net price and need tables in this section are based on the estimated price of attendance as reported by the institutions in the student budgets used to determine financial aid need. They are not strictly comparable to the tables in the NPSAS:93 undergraduate financing descriptive report, which were based on estimates from student-reported expenses (see notes to compendium section 2 of this report).
- There are a variety of net price measures. In addition to total price of attendance minus total financial aid (tables 4.1a, 4.1e, 4.1f, and 4.1g), these measures include total price of attendance minus grant aid only (table 4.1b), total price of attendance minus federal grant aid only (table 4.1c), and tuition and fees minus grant aid only (table 4.1d).
- The average net price after all financial aid in 1995-96 was $\$ 5,100$ for all undergraduates at all institutions. The average for those who received no financial aid was $\$ 5,500$; for those who received financial aid, the average net price was $\$ 4,700$ (table 4.1a).
- The average net price varied directly with the price of attendance (table 4.1a). For example, students with a total price of attendance under $\$ 4,000 \mathrm{had}$ an average net price of $\$ 1,400$, while students with a total price of attendance over $\$ 16,000 \mathrm{had}$ an average net price of \$12,600 (table 4.1a).
- Students attending private, not-for-profit 4-year doctorate-granting institutions had a higher net price $(\$ 11,400)$ than students attending any other type of institution (table 4.1a).
- Among all dependent students, average net price increased as family income increased. Among all independent students, however, there was no correlation between income and net price (table 4.1a).
- Using a more restricted measure of net price, the total price of attendance minus grant aid only was $\$ 6,500$ for all students. This net price measure was somewhat higher for students who received grants $(\$ 6,900)$ than for those who did not $(\$ 6,200)$ (table $4.1 b)$.
- Using another more restricted measure of net price, the total price of attendance minus all federal grants only (Pell and SEOG grants) was $\$ 7,200$ for all students (table 4.1c).
- The average net tuition (tuition and fees minus grant aid) for all students was $\$ 2,000$. Among low-income (less than $\$ 20,000$ ) dependent students at private, not-for-profit doctorate-granting institutions, the net tuition was $\$ 6,200$ (table 4.1d); their tuition before grant aid was $\$ 12,900$ (table 2.2a).
- The average net price (total price of attendance less total aid) for dependent undergraduates attending 4 -year institutions was $\$ 5,100$ for low-income (less than $\$ 20,000$ ) students; it was more than double that amount $(\$ 12,700)$ for high-income ( $\$ 100,000$ or more) dependent students (table 4.1e).
- The average net price of low-income (less than $\$ 20,000$ ) dependent students was $\$ 3,600$ for those who received grant aid; it was $\$ 6,100$ for those low-income dependents who did not receive such aid (table 4.1e).
- There was no difference in the average net price (about $\$ 3,800$ ) between independent students who received grant aid and those who did not receive grants. There was also no difference in the average net price (about $\$ 4,100$ ) of independent students aged 24 to 29 and those younger than 24 (table 4.1f).
- Among full-time, full-year undergraduates, the net price was directly related to family income for both dependent and independent students (table 4.1g).
- The average net price for all full-time, full-year students who received financial aid was $\$ 5,900$; the net price for those who received no financial aid $(\$ 11,400)$ was nearly twice as much (table 4.1g).

## Financial Aid Need

- With the exception of unsubsidized Stafford loans to students, PLUS loans to parents, and some very small merit-based grant programs, all federal financial aid programs are need based. The amount of need-based aid for which a student is eligible is determined by subtracting the federal expected family contribution (EFC) from the price of attendance as estimated by the postsecondary institution in a student budget, which includes tuition and fees, books and supplies, and allowances for room and board and other normal living expenses (see notes to compendium section 2 above).
- The federal EFC is a measure of the family's ability to pay for postsecondary education that is calculated from the information provided on the Free Federal Application for Student Aid (FAFSA). The information is used to determine the student's dependency status and to calculate an EFC based on family income, family size, the number of family members in postsecondary education, and some family assets under certain circumstances (a major change in the EFC formula since 1993 is that home equity is no longer included in calculating a contribution from assets). For dependent students, the income and other circumstances of the parents have primary consideration, but the student's savings and prior year's earnings are also considered. For independent students (all those aged 24 or older and some other categories of students), the parents' finances
are not considered, but the income of a spouse is taken into account. There are separate formulas for independent students who are unmarried without dependents, married without dependents, and those with dependents (married or unmarried).
- The EFC is highly correlated with family income for both dependent and independent students. For example, the average EFC for dependent students from families with incomes of less than $\$ 20,000$ a year was $\$ 1,000$, compared to $\$ 27,500$ for dependent students from families with incomes of $\$ 100,000$ or more. Similarly, independent students with incomes of $\$ 10,000$ or less were expected to contribute $\$ 650$, while those with incomes of $\$ 50,000$ or more were expected to contribute an average of $\$ 21,100$ (table 4.2).
- The EFC is based on the financial circumstances of the student and the student's family, and is determined independently of tuition or the price of attendance. There is a very low correlation between price of attendance and the EFC (table 4.2).
- Hispanic and non-Hispanic, black students had lower EFCs (ranging from \$4,1004,900 ) than either white, non-Hispanics or Asian/Pacific Islanders (\$8,400 and \$7,200, respectively) (table 4.2).
- Students between the ages of 24 and 29, who are all independent by definition, had a lower average EFC $(\$ 4,700)$ than that of any other age group (table 4.2).
- The average EFC for students who received no financial aid was nearly $\$ 10,000$; for those who received financial aid, the average EFC was $\$ 4,800$ (table 4.2).
- Financial aid need is determined by subtracting the EFC from the estimated price of attendance. Somewhat more than half ( 56 percent) of all undergraduates and threefourths (77 percent) of full-time, full-year students had need (that is, their price of attendance was higher than their EFC) (table 4.3a).
- Not unexpectedly, financial need varied directly with family income and the price of attendance. About 90 percent of students in the lowest income quartile had need, compared to 18 percent of students in the highest income quartile. Eighty-seven percent of students with a price of attendance of $\$ 16,000$ or more had some financial need, compared to less than one-fourth ( 23 percent) of students with a price of attendance under $\$ 4,000$ (table 4.3a).
- Financial need for federal aid varied by race-ethnicity. For example, 70 percent of black, non-Hispanic students had financial need, compared to 51 percent of white, nonHispanic students. However, among students with need, the average amount of need for both blacks and whites was about $\$ 7,000$ (tables 4.3a and 4.3b).
- Fifty-six percent of undergraduates had financial need before receiving aid, and 46 percent still had remaining need after receiving financial aid. The average amount of need before aid was $\$ 7,000$; for those who still had remaining need after financial aid, the average need was $\$ 4,200$ (tables 4.3a, 4.3b, 4.4a, and 4.4b).
- Financial need, both before and after receipt of aid, varied by the total price of attendance. Before receiving aid, 87 percent of students with total price over $\$ 16,000$ had
financial need, compared to 23 percent of students with total price under $\$ 4,000$. After receiving aid, the percentage with remaining need dropped to 68 percent for those with total price of attendance over $\$ 16,000$ ( 68 percent), but remained similar for those with total price of attendance under $\$ 4,000$ ( 20 percent) (tables 4.3a and 4.4a).
- Sixty-nine percent of all undergraduates with need received financial aid. Those who were charged less than $\$ 500$ for tuition and fees were the least likely ( 45 percent) to receive any aid (table 4.5a).
- The average amount of aid received by students with need was $\$ 5,700$. The average aid award for undergraduates with need whose price of attendance was over $\$ 16,000$ was $\$ 12,200$, while the average aid award for undergraduates with need whose price of attendance was below $\$ 4,000$ was $\$ 1,100$ (table $4.5 b$ ).

## Section 5: Student Characteristics

## Dependency Status

- According to federal financial aid regulations, undergraduates who are less than 24 years old are assumed to be financially dependent on their parents unless they are married, have dependents of their own, or are veterans, orphans, or wards of the court. Almost half ( 49 percent) of all undergraduates were considered dependent for financial aid purposes, while 18 percent of all students were independent and unmarried, 9 percent were married independent students with no dependents, and 25 percent were independent (married or unmarried) with dependents (table 5.1a).
- Among students 18 years or younger, 96 percent were dependent; among those aged 19 to 23,89 percent were dependent (table 5.1a).
- Institutions with longer programs of study were more likely to enroll dependent students than were less-than-4-year institutions. Sixty-three percent of students at 4-year institutions were financially dependent, compared to 38 percent at 2-year institutions and 24 percent at less-than-2-year institutions (table 5.1a).
- Dependency was related to institutional control. Students at private, not-for-profit institutions were more likely to be dependent than those at other types of institutions. Forty-four percent of students enrolled in private, for-profit institutions were independent with dependents (table 5.1a).
- Dependency status was also related to attendance patterns. Almost three-quarters (74 percent) of undergraduates who attended full time for the entire 1995-96 academic year were financially dependent. Students who attended part time for all or part of the year were more likely to be independent with dependents than were those who attended full time for the full academic year. Students who enrolled full time for part of the year were twice as likely to be independent with dependents as those who enrolled full time for the full year.

## Attendance Status

- Thirty-eight percent of the undergraduates were enrolled full time for a full year (8 or more months). One-fourth ( 24 percent) were enrolled part time for a full year, and another one-fourth ( 24 percent) were enrolled part time for less than a full year (table 5.1b).
- More than one-half (58 percent) of undergraduates enrolled in 4-year institutions were enrolled as full-time, full-year students, compared to less than one-fifth (18 percent) of undergraduates attending 2-year institutions (table 5.1b).
- Students attending less-than-2-year institutions, which offer short vocational programs, were more likely to be enrolled full time for less than a full year than those attending 2year or 4-year institutions (table 5.1b).
- Dependent students were more likely to be enrolled as full-time, full-year students than independent students ( 58 percent compared to 20 percent) (table 5.1b).
- The proportion of dependent students enrolled full time, full year increased as family income increased; the proportion of independent students enrolled full time, full year decreased as family income increased (table 5.1b).

## Residence

- About 60 percent of undergraduates enrolled in the 1995-96 academic year lived in off-campus housing; 25 percent lived with their parents or other relatives; and 14 percent lived in on-campus housing. At 4 -year institutions, about one-fourth ( 26 percent) lived on campus (table 5.1c).
- Forty percent of dependent undergraduates lived at home with parents or relatives (table 5.1c).
- Nearly one-half (48 percent) of the undergraduates who were charged $\$ 8,000$ or more in tuition and fees lived in on-campus housing (table 5.1c).

## Race-Ethnicity

- The racial-ethnic distribution of undergraduates varied by institution control. Students attending public or private, not-for-profit institutions were more likely to be white, non-Hispanic and were less likely to be black, non-Hispanic or Hispanic than those attending private, for-profit institutions (table 5.2a).
- A similar pattern was reflected by institution level. Students attending 4-year institutions were more likely to be white and less likely to be black or Hispanic than those attending 2-year institutions (table 5.2a).
- White students represented less than one-half (46 percent) of dependent low-income undergraduates (family income less than $\$ 20,000$ ). Twenty percent of the low-income dependent students were black; 21 percent were Hispanic; 11 percent were Asian/Pacific Islander; and 2 percent were American Indian/Alaskan Native (table 5.2a).

## Gender and Citizenship

- A majority of undergraduates were women ( 57 percent). There was a higher proportion of women than men both among dependents ( 53 percent) and independents ( 61 percent) (table 5.2b).
- Ninety-five percent of all undergraduates were U.S. citizens. Among Asian/Pacific Islanders, 27 percent were noncitizens eligible for federal financial aid, and 7 percent were nonresident aliens ineligible for federal student aid (table 5.2b).

## Family Income

- Among dependent undergraduates, 19 percent came from families with incomes of less than $\$ 20,000 ; 11$ percent came from families with incomes of $\$ 100,000$ or more (table 5.3).
- One-third (34 percent) of the dependent students attending private, for-profit institutions came from families with incomes of less than $\$ 20,000$, compared to 18 percent of the dependent undergraduates attending either public or private, not-for-profit institutions (table 5.3).
- Private, not-for-profit doctorate-granting institutions enrolled a higher percentage (21 percent) of dependent students with family incomes of $\$ 100,000$ or more than did any other type of institution (table 5.3).
- Twelve percent of white, non-Hispanic dependent students came from families with incomes of less than $\$ 20,000$, compared to nearly 40 percent of dependent black, nonHispanic or Hispanic students (table 5.3).
- About half ( 53 percent) of the dependent students whose parents had not completed a high school education came from families with incomes of less than $\$ 20,000$ (table 5.3).
- Twenty-nine percent of independent undergraduates had incomes of less than $\$ 10,000$. Among independent students attending private, for-profit institutions, 44 percent had incomes of less than $\$ 10,000$ (table 5.4).
- Younger independent students were more likely to have low incomes than older independent students. For example, 87 percent of independent students age 18 or younger had incomes of less than $\$ 10,000$, compared to 15 percent of those age 40 or older (table 5.4).
- Thirty percent of the married independent students who had no dependents had family incomes of $\$ 50,000$ or more (table 5.4).

## Institution Level and Control

- More undergraduates were enrolled in public 2-year institutions (43 percent) than in any other type. Five percent of undergraduates were enrolled in private, for-profit in-
stitutions. Nearly 5 percent of the students attended more than one institution during the 1995-96 academic year (table 5.5).
- The public 2-year institutions enrolled 19 percent of full-time, full-year students, 41 percent of full-time, part-year students, 58 percent of part-time, part-year students, and 69 percent of part-time, part-year students (table 5.5).
- Eighty-eight percent of the students who were charged less than $\$ 500$ in tuition and fees and 66 percent of those charged between $\$ 500$ and $\$ 1,000$ attended public 2-year institutions (table 5.5).
- More than half (53 percent) of all independent students attended public 2-year institutions, while 33 percent of dependent students did so (table 5.5).
- More than half ( 55 percent) of students whose parents had less than a high school education were enrolled in public 2-year institutions, compared to 34 percent of those whose parents had completed a bachelor's degree (table 5.5).

## Appendix A-Glossary

This glossary describes the variables used in this report. The items were taken directly from the NCES NPSAS:96 undergraduate Data Analysis System (DAS), an NCES software application that generates tables from the NPSAS:96 data (see appendix B for a description of the DAS). The glossary is in alphabetical order by the variable label in the DAS, shown in bold, capital letters and displayed along the right-hand column.

The variables listed in the index below are in the order they appear, first in the essay and the corresponding compendium tables in section 1, and then as they appear in sections 2 through 5 of the compendium tables. The glossary index is organized by institutional characteristics, student characteristics, and financial aid variables.

## Glossary Index

## Essay And Compendium Section 1

| Institutional Characteristics |  |
| :---: | :---: |
| Type of institution. | AIDSECT |
| Price of attendance/Student budget ............................ | BUDGETA2 |
| Tuition and fees. | .. TUITION2 |

Any institutional aid/Total institutional aid ..... INSTAMT
Institutional grants INGRTAMT
Institutional loans. ..... INLNAMT
Institutional work-study ..... INSTWRK
Other institutional aid ..... INOTHAMT
Institutional non-need grants ..... INSTNOND
Aid combinations by type of aid ..... AIDPACK
Net price (price of attendance less all aid)..NETCST1
Price of attendance less federal grants ..... NETCST2
Price of attendance less all grants ..... NETCST3
Tuition and fees less grants ..... NETCST9
Expected family contribution ..... EFC4
Financial aid need ..... SNEED1
Remaining need after aid ..... SNEED2

Indicates student's age as of 12/31/95. Calculated from date of birth.
18 years or younger
19-23 years
23-29 years
30-39 years
40 years or older

## Control of institution

AIDCTRL
Source of revenue and control of operations for the NPSAS institution. Excludes students attending more than one institution. Students attending more than one institution in 1995-96 are in a separate category because information on tuition, price of attendance, and financial aid at the second institution is incomplete or unknown.

Public

Private, not-for-profit

Private, for-profit

A postsecondary education institution, which is supported primarily by public funds and operated by publicly elected or appointed officials who control the programs and activities.

A postsecondary institution that is controlled by an independent governing board and incorporated under Section 501(c)(3) of the Internal Revenue Code.

A postsecondary institution that is privately owned and operated as a profit-making enterprise. Includes career colleges and proprietary institutions.

## Level of institution

## AIDLEVL

Level of highest offering at the NPSAS institution. Excludes students attending more than one institution. Students attending more than one institution in 1995-96 are in a separate category because information on tuition, price of attendance, and financial aid at the second institution is incomplete or unknown.

| Less-than-2-year | Institution where all of the programs are less than 2 years in <br> duration. The institution must offer a minimum of one program <br> of at least 3 months in duration that results in a terminal cer- <br> tificate or license or is creditable toward a formal 2-year or <br> higher award. |
| :--- | :--- |
| 2-year | Institution that confers a 2-year formal award (certificate or as- <br> sociate's degree) or offers a 2-year program that partially ful- <br> fills requirements for a baccalaureate or higher degree at a 4- <br> year institution. The institution does not award a baccalaureate <br> degree. These would include most community or junior col- <br> leges. |
| 4-year | Institution that confers at least a baccalaureate degree in one or <br> more programs, and may or may not award higher than a mas- <br> ter's degree. |

## Combinations of financial aid by type of aid

## AIDPACK

Indicates package by type of aid package received during 1995-96. For students with any aid, this variable indicates combinations of aid from grants, loans, and other types of aid. PLUS loans are categorized as "other aid" rather than as student loans.

| Grant only | Student received only grants, scholarships, or employer aid. |
| :--- | :--- |
| Grant and work | Student received grants and had a work-study job. |
| Grant, loan, and work-study | Student received grants, loans, and work-study. |
| Grant and loan | Student received only grant and loan aid. |
| Loan only | Student received loan only. |
| Loan and work | Student received a loan and had a work-study job. |
| Other | Student received other combinations of aid not listed above. |

## Type of institution <br> AIDSECT

Indicates the level and control of the NPSAS institution. Institution level concerns the institution's highest offering (see AIDLEVL), and control concerns the source of revenue and control of operations (see AIDCTRL). Students attending more than one institution in 1995-96 are in a separate category because information on tuition, price of attendance, and financial aid at the second institution is incomplete or unknown. "More than one institution" is not shown in all tables, but is included in the totals unless specified otherwise. Doctorate- and nondoctorate-granting 4year institutions were aggregated in the essay. Public less-than-2-year and private, not-for-profit less-than-4-year are either aggregated as "other" or not shown in the tables. They are included in the totals, as indicated on the tables.

```
Public
    Less-than-2-year
    2-year
    4-year
        Nondoctorate-granting
        Doctorate-granting
Private, not-for-profit
    Less-than-4-year
    4 year
        Nondoctorate-granting
        Doctorate-granting
Private, for-profit
```

Attendance pattern

## ATTNSTAT

Combined attendance intensity and persistence during 1995-96. Intensity refers to the student's full- or part-time attendance while enrolled. Persistence refers to the number of months a student was enrolled during the year. Students were considered to have been enrolled for a full year if they were enrolled for 8 or more months during 199596. Months did not have to be contiguous or at the same institution, and students did not have to be enrolled for a full month in order to be considered enrolled for that month. In prior NPSAS surveys, full year had been defined as 9 or more months. In the essay, the three part-time and part-year categories are aggregated into "part-time or part-year."

| Full-time, full-year | Students were enrolled at least 8 months full time during <br> $1995-96$. Additional months enrolled could be part time. |
| :--- | :--- |
| Full-time, part-year | Students were enrolled less than 8 months during 1995-96 and <br> attending full time in all of these months. |
| Part-time, full-year | Students were enrolled 8 or more months during 1995-96 but <br> less than 8 months were full time. |
| Part-time, part-year | Students were enrolled less than 8 months during 1995-96 and <br> some of these months were part time. |

Ever borrowed federal student loan through 1996/
Cumulative amount of federal student loans through 1996
BORFED

Indicates the cumulative federal loan amount the student borrowed for education through 1996. Excludes PLUS. Includes all types of Stafford loans, SLS loans, and Perkins loans. Based on the cumulative amounts dispersed according to the National Student Loan Data System (NSLDS) at the end of 1996 or the federal loan amount reported by the student in the telephone interview, whichever was greater. The amount owed or outstanding in 1996 may be less than the total amount borrowed. The percentage with a positive amount for this variable is the percentage who ever borrowed a federal student loan.

## Price of attendance/

Student budget
BUDGETA2
Indicates total student budget (attendance adjusted) at the NPSAS institution. BUDGETA2 estimates actual expenses based on tuition paid, number of months enrolled, and attendance status while enrolled. Non-tuition expenses (SBNONTUN) are prorated for half-time ( 75 percent), unknown status ( 50 percent), and less than half-time ( 25 percent), and the actual tuition (TUITION) is added to the estimated non-tuition expenses. Excludes students attending more than one institution, since the student budget at the second institution is unknown. More detailed categories are shown in compendium sections 2 through 5 than in the essay.

Less than \$4,000
\$4000-7,999
$\$ 8,000$ or more
Less than \$4,000
\$4000-7,999
\$8,000-11,999
\$12,000-15,999
$\$ 16,000$ or more

## Citizenship

Indicates student's citizenship status and federal financial aid eligibility. Constructed from citizenship status reported on Free Application for Federal Student Aid (FAFSA), institutional reports, and student interviews.

U.S. Citizen<br>Eligible noncitizen<br>Ineligible noncitizen<br>Student has U.S. citizenship in 1995-96.<br>Student was not a U.S. citizen in 1995-96; included permanent residents and others eligible for federal financial aid.<br>Student was not a U.S. citizen in 1995-96, not a permanent resident, and was not eligible for federal financial aid.

## Dependency status

## DEPEND

Student dependency status. Students were considered independent if they met any of the following criteria:

1) Student was age 24 or older as of $12 / 31 / 95$;
2) Student was a veteran of the U.S. Armed Forces;
3) Student was enrolled in a graduate or professional program (beyond a bachelor's degree) in 1995-96;
4) Student was married;
5) Student was an orphan or ward of the court; or
6) Student had legal dependents other than spouse.

In addition, financial aid officers may designate students who do not meet these criteria to be independent, if the students can document that they are in fact self-supporting.

Dependent
Independent

## Dependency status (4 categories)

## DEPEND4

Student dependency status for financial aid, including marital status. Combines student dependency status, marital status, and whether they have dependents. The distinction between the two types of independent students changed between NPSAS:93 and NPSAS:96 as a result of the 1992 Reauthorization Amendments. Prior to the 1993-94 academic year, the spouse of a married student was considered to be a dependent of the student, and married students without children were classified as independent with dependents. As of 1993-94, the spouse of a student is not considered to be that student's dependent, so married students without children are classified as independent without dependents in NPSAS:96. This variable is provided to allow comparability between the two surveys.

## Dependent

Independent, no dependents, unmarried
Independent, no dependents, married
Independent with dependents (married or unmarried)

## Dependent 1994 income

DEPINC
Indicates dependent student's parents' total family income for 1994.
Under \$25,000
\$25,000-70,000
Over \$70,000

## Expected family contribution

EFC4
Indicates composite expected family contribution for 1995-96. The best estimate of the student's EFC, derived from examining the EFC values reported in the Pell payment file, the CPS matching records, the NPSAS institution in CADE, or estimated by regressions based on dependency, family size, income, assets, and number in college. Differences in the timing of these sources (any time during the NPSAS year), differences in the institutions to which they refer (not necessarily the NPSAS institution where the student was sampled), changes in the student's dependency status and financial situation during the period of a year, and the potential use of Professional Judgment changes by financial aid officers at any time or at any institution make it impossible to determine a single definitive EFC value or dependency status for all students during the entire year. For Pell grant recipients, the EFC on the Pell payment file was always used; for other financial aid recipients, the primary EFC from the most recent CPS record (CPS162) was used if available, or an EFC reported by the NPSAS institution was used. Approximately 52 percent of the EFCs were imputed. The percentage of students with reported EFCs in a particular category is approximately the same as the percentage who received federal financial aid in that category.

## Gender

GENDER

Male
Female

## Dependency and 1994 income

INCOME
Indicates total family income in 1994 (categorical) by student dependency status.
Dependent
Less than \$20,000
\$20,000-\$39,999
\$40,000-\$59,999
\$60,000-\$79,999
\$80,000-\$99,999
$\$ 100,000$ or more
Independent
Less than \$5,000
\$5,000-\$9,999
\$10,000-\$19,999
\$20,000-\$29,999
\$30,000-\$49,999
$\$ 50,000$ or more

Independent 1994 income
INDEPINC
Indicates independent student's total income (including spouse, if married) in 1994.
Under \$10,000
\$10,000-35,000
Over \$35,000

## Institutional grants

INGRTAMT
Indicates the total amount of institutional grant aid received during 1995-96. Includes all grants and scholarships, tuition waivers, and graduate fellowships received during the NPSAS year. See grid under TOTAID for more information.

Institutional loans
INLNAMT
Indicates the loan amount from funds provided by the educational institution during 1995-96. See grid under TOTAID for more information.

## Other institutional aid

INOTHAMT
Indicates the amount of institutional aid that was not classified as grants, loans, or work-study. Includes teaching and research assistantships. See grid under TOTAID for more information.

## Any institutional aid/

INSTAMT Total institutional aid

Indicates the total institutional aid amount received during 1995-96. Equal to the sum of institutional grants and fellowships, loans, institution-sponsored work-study, and all other institutional amounts including assistantships. The percentage with a positive value is the percentage with institutional aid. See grid under TOTAID for more information.

## Institutional non-need grants

INSTNOND
Indicates the amount of institution grants and scholarships that were based entirely on merit or other circumstances not related to need during 1995-96.

## Institutional work-study

## INSTWRK

Indicates the amount of institution-sponsored work-study received during 1995-96. Includes any institutional amounts that were classified as work-study or campus employment. See grid under TOTAID for more information.

## Combinations of loans and other aid

Indicates whether a student received only loan aid (excluding PLUS), a combination of loan and non-loan aid, or only non-loan aid such as grants or work-study. PLUS loans are classified as "other aid."

Aided, no loans
Loans and other aid
Loans only
No aid

## Federal loan combinations

Indicates the combination of federal Stafford loans, Perkins loans, and PLUS loans received during 1995-96. Students in each category may or may not have received other aid.

Stafford only<br>Stafford and Perkins<br>Stafford and PLUS<br>Stafford, Perkins, PLUS<br>Perkins only<br>PLUS only<br>Other combinations<br>No federal loans

## Local residence

## LOCALRES

The student housing status as reported either by the NPSAS institution for the student budget, by the student on the financial aid application, or by the student in the telephone interview.

On campus

Off campus

With parents/other relatives

Student lived in institution-owned living quarters for students. These are typically institution-owned dormitories, residence halls, or other facilities.

Student lived off campus in noninstitution-owned housing, but not with his or her parents or other relatives.

Student lived at home with parents or other relatives.

Indicates attendance-adjusted student budget minus total aid (BUDGETA2-TOTAID). This item helps to answer "On average, how much money did students (including full-time and part-time students) who attended in 1995-96 need to come up with, considering the student budget (tuition, books, fees, living expenses) then subtracting all aid received (grants, loans, work-study)?" It is not the total amount, because the loans will need to be repaid someday.

Price of attendance less federal grants
NETCST2

Indicates attendance-adjusted student budget (BUDGETA2) minus federal grants (TFEDGRT). This item helps to answer "How much money did students need to meet their price of attendance (including tuition, fees, books, living expenses) after subtracting federal grants received?" See BUDGETA2 and NETCST1 for additional information.

## Price of attendance less all grants

NETCST3

Indicates attendance-adjusted student budget (BUDGETA2) minus total grant aid (TOTGRT). This item helps to answer "How much money did students need to meet their price of attendance (including tuition, fees, books, living expenses) after subtracting all grant aid received?" See BUDGETA2 and NETCST1 for additional information.

Indicates tuition and fees (TUITION2) minus grants (TOTGRT). Negative values set to zero. See NETCST1 for additional information.

## Parents' highest education

PARED

The highest level of education completed by the student's parents (mother or father, whoever has the highest level).

Less than high school diploma

High school diploma or equivalent

Postsecondary

Neither parent graduated from high school or received a General Educational Development (GED) certificate.

One or both parents graduated from high school or received a GED.

One or both parents had some postsecondary education.

## Income percentile rank

PCTALL2

Percentile rank of NPSAS sample students by total income in 1994. Percentiles were calculated separately for dependent and independent students, and then combined in this variable, so independent ranks are based on the independent student income distribution and dependent ranks are based on the dependent parents' income distribution.

The cutpoints for the 25 th and the 75 th percentile were $\$ 25,000$ and $\$ 70,000$ for dependent students and $\$ 8,000$ and $\$ 35,000$ for independent students.

Lowest quartile Dependent and independent students whose income ranked in the lowest 25 percent of their income distributions.

Middle quartiles

Highest quartile

Students whose income ranked between 26 percent and 75 percent of their respective student income distributions.

Students whose income ranked in the top 25 percent of their respective income distributions.

Indicates the federal Perkins loan amount received during 1995-96. The Perkins loan is a campus-based (i.e., administered by each institution) low-interest loan for students who show exceptional financial need. It is intended to supplement the Pell grant (priority is given to Pell grant recipients). For undergraduates, total annual awards cannot exceed $\$ 3,000$, and the maximum amount that can be borrowed is $\$ 15,000$.

Indicates the total federal PLUS loans (Direct and FFEL) received during 1995-96. PLUS loans are unsubsidized variable-interest rate loans awarded to parents of dependent students who are able to meet criteria for credit worthiness. PLUS loans are awarded up to the maximum amount of the price of attendance at the institution minus any other financial aid. Two types of PLUS loans are available to eligible students' parents: Direct and FFEL PLUS loans. Direct loans are available through the institution, and FFEL loans are offered by commercial lenders such as banks, credit unions, or savings and loan associations. PLUS loans received at the second institution are included in the calculation of PLUSAMT3.

| White, non-Hispanic | A person having origins in any of the original peoples of <br> Europe, North Africa, or the Middle East (except those of His- <br> panic origin). |
| :--- | :--- |
| Black, non-Hispanic | A person having origins in any of the black racial groups of <br> Africa, not of Hispanic origin. |
| Hispanic | A person of Mexican, Puerto Rican, Cuban, Central or South <br> American, or other Spanish culture or origin, regardless of <br> race. |
| Asian/Pacific Islander | A person having origins in any of the peoples of the Far East, <br> Southeast Asia, the Indian subcontinent, or Pacific Islands. <br> This includes people from China, Japan, Korea, the Philippine |
| Islands, Samoa, India, and Vietnam. |  |

## Non-tuition expenses

SBNONTAJ
The estimated non-tuition expenses reported in student budgets. Includes books and supplies, room and board or housing and meal allowances, transportation, and personal expenses related to attendance. Equal to the student budget minus tuition and fees (BUDGETA2-TUITION2). For students not enrolled full time for the full academic year, non-tuition expenses were adjusted to reflect attendance status and the number of months enrolled.

## Financial aid need

The price of attendance (BUDGETA2) minus the expected family contribution (EFC4). A measure of total need for financial aid. Negative values recoded to zero.

## Remaining need after aid

SNEED2

The price of attendance (BUDGETA2) minus the expected family contribution (EFC4) minus financial aid received (TOTAID), if any, including loans. A measure of unmet need. Negative values recoded to zero.

## Stafford loan

STAFFAMT
Indicates the total amount of Stafford loans (Direct, FFEL, subsidized, and unsubsidized) received during 1995-96, including loans borrowed to attend schools other than the NPSAS school. All of the federal loan variables in NPSAS:96 include the loans borrowed at all schools attended, since the CADE institutional-reported amounts were supplemented with information from the National Student Loan Data System (NSLDS).

There are four categories of federal Stafford Loans. Under the DIRECT Loan Program, the federal government makes loans directly to students and parents through schools. Under the FFEL Program, private lenders such as banks, credit unions, and savings and loan associations usually make the loans. Although the source of funds is different, both programs provide the same types of loans. A SUBSIDIZED loan is awarded on the basis of financial need. If a student qualifies for a subsidized loan, the federal government pays the interest on the loan until the student begins repayment, and during authorized periods of deferment thereafter. An UNSUBSIDIZED loan is not awarded on the basis of need. If a student qualifies for an unsubsidized loan, he or she is charged interest from the time the loan is disbursed until it is paid in full. Students can choose to pay the interest or allow it to accumulate. If the student allows the interest to accumulate, it will be capitalized (added to the principal amount of the loan). Annual loan limits vary considerably. See STAFFCT1 and STAFFCT2 for the restrictions.

## Stafford subsidized maximum amount

STAFFCT1
Indicates the Stafford subsidized loan amount categories received during 1995-96. Classifies the Stafford subsidized loan total amount (STAFSUB) into categories based on maximum subsidized loan amounts. The subsidized maximum for first-year students in 1995-96 was $\$ 2,625$; for second-year students, $\$ 3,500$; for third-, fourth-, and fifthyear students, $\$ 5,500$; and for graduate and professional students, $\$ 8,500$.

None
Less than maximum
Maximum

## Stafford total maximum amount

STAFFCT2
Indicates the Stafford total amount categories received during 1995-96. Classifies the Stafford loan total amount (STAFFAMT) into categories based on maximum loan amounts for subsidized and unsubsidized loans combined. Maximum loan amounts were determined by the student's class level and dependency status according to the following table:

| Student class level: | Dependent: | Independent: |
| :--- | :--- | :--- |
| First year | $\$ 2,625$ | $\$ 6,625$ |
| Second year | $\$ 3,500$ | $\$ 7,500$ |
| Third-fifth year | $\$ 5,500$ | $\$ 10,500$ |
| Graduate/First-professional | N.A. | $\$ 18,500$ |

None
Less than maximum
Maximum

Subsidized loan
STAFSUB
Indicates the amount of subsidized Stafford (FFEL or Direct) loans received during 1995-96. For more information about loans, see STAFFAMT.

## Subsidized and unsubsidized loan combinations

Indicates whether a student received a subsidized Stafford loan (STAFSUB), an unsubsidized Stafford loan (STAFUNSB), or both in 1995-96. For more information about loans see STAFFAMT.

Subsidized only
Both subsidized and unsubsidized
Unsubsidized only

## Unsubsidized loan

STAFUNSB

Indicates the amount of unsubsidized Stafford (FFEL or Direct) loans received during 1995-96. For more information about loans, see STAFFAMT.

## Any state aid/ State aid total

Indicates the amount of state aid received during 1995-96. Equal to the sum of state grants (STGTAMT), state loans (STLNAMT), state-sponsored work-study (STWKAMT), and all other state financial aid (STOTHAMT). Includes amounts awarded for state work-study and State Student Incentive Grants (SSIG) grants (including the federal portion). The percentage with a positive value on this variable is the percentage with any state aid. See grid under TOTAID for more information.

## State non-need grants or scholarships

STATNOND
Indicates the amount of state-funded grants and scholarships that were based on merit alone received during 199596. Awards based on both merit and need are categorized separately.

## Number of years borrowed

STFYRS

The number of years that a student had borrowed federal Stafford or SLS loans according to the federal loan records in the National Student Loan Data System at the end of 1996.

## State grants

STGTAMT

Includes state-funded grants, scholarships, fellowships, and traineeships, including the federal portion of State Student Incentive Grants (SSIG) received during 1995-96. See grid under TOTAID for more information.

## State loans

STLNAMT

Indicates the amount of state loans received during 1995-96. See grid under TOTAID for more information.

## Other state aid

Indicates the amount of state aid that was not classified as grants, loans, or work-study. Includes vocational rehabilitation and job training, waivers for state employees, and payments for incarcerated students received during 199596.

## State work-study

## STWKAMT

Indicates the state work-study amount received during 1995-96. See grid under TOTAID for more information.

## Any federal aid/ Total federal aid

Indicates the total amount of federal financial aid, excluding veterans benefits. Equal to the sum of federal loans (TFEDLN), federal grants (TFEDGRT), federal work-study (TFEDWRK), and all other federal financial aid, excluding veteran's benefits, received during 1995-96. The percentage with a positive amount for this variable is the percentage with any federal aid. See grid under TOTAID for more information.

## Federal grants

TFEDGRT

Indicates the total amount of federal grants, primarily Pell grants and Supplemental Educational Opportunity Grants. Does not include veteran's benefits. See grid under TOTAID for more information.

Federal loans (except PLUS)
TFEDLN

Indicates the total amount of federal loans, excluding PLUS. Includes Perkins (PERKAMT), Stafford (STAFFAMT), and federal loans through the Public Health Service received during 1995-96. Includes amounts borrowed at a second non-NPSAS institution. See STAFFAMT and the grid under TOTAID for more information.

## Federal loans (including PLUS)

TFEDLN2
Indicates the total amount of federal loans, including PLUS, received during 1995-96. Includes Perkins (PERKAMT), Stafford (STAFFAMT), other federal loans through the Public Health Service and PLUSAMT3. Includes amounts borrowed at a second non-NPSAS school. See STAFFAMT and TOTAID.

## Federal work-study

TFEDWRK
Indicates the total amount of federal work-study funds received during 1995-96, including the institutional or employer contribution.

## Non-federal loans

TNFEDLN

Indicates the total amount of non-federal student loans received during 1995-96. Equal to total amount of all loans (TOTLOAN), minus total amount of federal loans (TFEDLN2). Non-federal loans to parents are not included.

## Any aid/ <br> Total aid/

TOTAID

Aid status
Indicates the total amount of all financial aid received during 1995-96. The percentage with a positive value is the percentage with any aid. Aid status identifies those with a positive amount. TOTAID is related to other award variables by type and source of aid according to this grid:

|  | Federal | $+$ | State | $+$ | Institutional | $+$ | Other | $=$ Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Grants: | TFEDGRT | $+$ | STGTAMT | + | INGRTAMT | $+$ | OTHGTAMT | $=$ TOTGRT |
| Loans: | TFEDLN | $+$ | STLNAMT | + | INLNAMT | $+$ | OTHLNAMT | $=$ TOTLOAN |
| Work: | TFEDWRK | $+$ | STWKAMT | + | INSTCWS | $+$ | OTHWKAMT | $=$ TOTWKST |
| Other: | TFEDOTHR | $+$ | STOTHAMT | + | INOTHAMT | $+$ | OTHROTHR | $=$ TOTOTHR |
| Total: | TFEDAID | + | STATEAMT | + | INSTAMT | $+$ | OTHRSCR | $=$ TOTAID |

PLUS loans are included in TFEDOTHR and TOTOTHR rather than in TFEDLN and TOTLOAN. Veteran's and military benefits are included in OTHROTHR ("other" financial aid), rather than as part of any federal aid totals. Assistantships are classified as "other" type and "institutional" source. There are two totals of "other" amounts: other by type and other by source.

TOTOTHR is the total of all amounts that were not classified by type as grants, loans, or work-study. This includes PLUS loans (PLUSAMT3), veterans benefits and military aid, and vocational rehabilitation and JTPA. OTHRSCR is the total of all amounts that were not classified by source as federal, state, or institutional, including employer aid and private aid. The percentage with a positive value is the percentage with any aid. Aid status identifies those with a positive amount.

NOTE: Not all NPSAS DAS variables shown in this grid are used individually in this report, and thus do not appear in the glossary.

## Any grants/

TOTGRT Total grants/ Grant status

Indicates the total amount of all grants and scholarships: federal, state, institutional, and other received during 199596. Equal to sum of all federal grants (TFEDGRT), state grants (STGTAMT), institutional grants (INGTAMT), and "other" grants that were not classified as federal, state, or institutional. Includes employer tuition reimbursements. The percentage with a positive value is the percentage with any grant aid. Grant status identifies those with a positive amount. See grid under TOTAID for more information.

## Any loan/ Total loans/ Loan status

TOTLOAN

Indicates the total amount of all loans: federal, state, institutional, and private sector received during 1995-96 except PLUS. Equal to the sum of federal loan amount (TFEDLN), state loan amount (STLNAMT), institution loan amount (INLNAMT), and other loan amount (OTHLNAMT). Does not include PLUS loans (PLUSAMT3), although TOTLOAN2 does. The percentage with a positive value is the percentage with any loan aid. Loan status identifies those with a positive amount.

## Any loan (including PLUS)

TOTLOAN2

Indicates the total amount of all loans: federal, state, institutional, and private sector received during 1995-96. Equal to the sum of total loan amount (TOTLOAN) and the amount of PLUS loans to parents (PLUSAMT3). TOTLOAN,
not TOTLOAN2, was used to calculate TOTAID (total amount of all aid). The percentage with a positive value is the percentage with any loan aid, including PLUS loans to parents.

## Any other type aid/ Total other type aid

TOTOTHR

Indicates the total of amount of aid received during 1995-96 that was not classified as grants, loans, or work-study. Includes teaching and research assistantships, PLUS loans, veteran's benefits and military tuition aid, vocational rehabilitation and JTPA. Equal to the sum of other federal amounts, other state amounts (STOTHAMT), and other institutional amounts (INOTHAMT). The percentage with a positive value is the percentage with any other aid.

## Any work-study/ <br> TOTWKST Total work-study

Indicates the total amount of all work-study awards received during 1995-96. Equal to the sum of federal work-study amount (TFEDWRK), state work-study amount (STWKAMT), and institution work-study amount (INSTWRK). The percentage with a positive value is the percentage with any work-study aid.

## Tuition and fees

TUITION2

Indicates amount of tuition charged the student for the terms attended at the NPSAS institution, as reported by the institution. If tuition amounts were not reported, they were estimated based on the average per credit or per term charges for other students at the institution according to their class level, degree program, and attendance status. Students attending more than one institution during 1995-96 are excluded, since their tuition at the second institution is unknown.

## Undergraduate class level

## UGLEVEL2

Undergraduate level during last term 1995-96. Variable set equal to student level during last term for undergraduates. First-time beginning students were categorized separately as were seniors finishing in 1995-96. Other (category 8) includes unclassified undergraduates and students with degrees who may be taking an undergraduate course. Detailed categories were aggregated in the tables of this report as follows:

| First year | First-time beginning freshman <br> Other first year undergraduate |
| :--- | :--- |
| Second year | Second year/sophomore |
| Third year | Third year/junior |
| Fourth year or more | Fourth year/senior <br> Fifth year or higher undergraduate <br> Graduating seniors |
| Other | Other, including unclassified by level |

For public 2-year and private, for-profit institutions, the percentage of students beyond the second year is very small and was not shown in the tables. For 4-year institutions, graduating seniors were included in the category fourth year or more and are also shown as a separate category. Unclassified students were not shown in the tables.

## Appendix B-Technical Notes and Methodology

## The 1995-96 National Postsecondary Student Aid Study (NPSAS:96)

The 1995-96 National Postsecondary Student Aid Study (NPSAS:96) is a comprehensive nationwide study conducted by the Department of Education's National Center for Education Statistics (NCES) to determine how students and their families pay for postsecondary education. ${ }^{41}$ It also describes demographic and other characteristics of students enrolled. The study is based on a nationally representative sample of all students in postsecondary education institutions, including undergraduate, graduate, and first-professional students. Students attending all types and levels of institutions are represented in the sample, including public and private institutions and less-than-2-year institutions, 2-year institutions, and 4-year colleges and universities. The study is designed to address the policy questions resulting from the rapid growth of financial aid programs, and the succession of changes in financial aid program policies since 1986. The first NPSAS study was conducted in 1986-87, and then again in 1989-90 and in 1992-93.

For NPSAS:96 information was obtained from more than 830 postsecondary institutions on approximately 41,400 undergraduates, and approximately 27,000 of the undergraduates in the sample were interviewed. The weighted response rate for institutional record data collection was 93.1 percent. The weighted effective response rate for the telephone interviews was 76.2 percent.

## Accuracy of Estimates

The statistics in this report are estimates derived from a sample. Two broad categories of error occur in such estimates: sampling and nonsampling errors. Sampling errors occur because observations are made only on samples of students, not entire populations. Nonsampling errors occur not only in sample surveys but also in complete censuses of entire populations. Nonsampling errors can be attributed to a number of sources: inability to obtain complete information about all students in all institutions in the sample (some students or institutions refused to participate, or students participated but answered only certain items); ambiguous definitions; differences in interpreting questions; inability or unwillingness to give correct information; mistakes in

[^21]recording or coding data; and other errors of collecting, processing, sampling, and imputing missing data.

## Data Analysis System

The estimates presented in this report were produced using the NPSAS:96 Data Analysis Systems (DAS). The DAS software makes it possible for users to specify and generate their own tables from the NPSAS:96 data. With the DAS, users can replicate or expand upon the tables presented in this report. In addition to the table estimates, the DAS calculates proper standard errors ${ }^{42}$ and weighted sample sizes for these estimates. For example, table B1 contains standard errors that correspond to table 3.1a in the table compendium, and it was generated by the DAS. If the number of valid cases is too small to produce a reliable estimate (less than 30 cases), the DAS prints the message "low-N" instead of the estimate.

In addition to tables, the DAS will also produce a correlation matrix of selected variables to be used for linear regression models. Included in the output with the correlation matrix are the design effects (DEFTs) for each variable in the matrix. Since statistical procedures generally compute regression coefficients based on simple random sample assumptions, the standard errors must be adjusted with the design effects to take into account the NPSAS:96 stratified sampling method.

For more information about the NPSAS:96 Data Analysis Systems, consult the NCES DAS Website (WWW.PEDAR-DAS.org) or contact:

## Statistical Procedures

The descriptive comparisons were tested in this report using Student's $t$ statistic. Differences between estimates are tested against the probability of a Type I error, or significance level. The significance levels were determined by calculating the Student's $t$ values for the differences between each pair of means or proportions and comparing these with published tables of significance levels for two-tailed hypothesis testing.

Student's $t$ values may be computed to test the difference between estimates with the following formula:

$$
\begin{equation*}
t=\frac{E_{1}-E_{2}}{\sqrt{s e_{1}^{1}+s e_{2}^{2}}} \tag{1}
\end{equation*}
$$

where $E_{1}$ and $E_{2}$ are the estimates to be compared and $s e_{1}$ and $s e_{2}$ are their corresponding standard errors. This formula is valid only for independent estimates. When estimates are not independent, a covariance term must be added to the formula. If the comparison is between the mean of a subgroup and the mean of the total group, the following formula is used:

$$
\begin{equation*}
\frac{E_{s u b}-E_{t o t}}{\sqrt{s e_{s u b}^{2}+s e_{t o t}^{2}-2 p s e_{s u b}^{2}}} \tag{2}
\end{equation*}
$$

where $p$ is the proportion of the total group contained in the subgroup. ${ }^{43}$
When comparing two percentages from a distribution that adds to 100 percent, the following formula is used:

$$
\begin{equation*}
\frac{\mathrm{E}_{1}-\mathrm{E}_{2}}{\sqrt{\mathrm{se}_{1}^{2}+\mathrm{se}_{2}^{2}-2(\mathrm{r}) \mathrm{se}_{1} \mathrm{se}_{2}}} \tag{3}
\end{equation*}
$$

where $r$ is the correlation between the two estimates. ${ }^{44}$ The estimates, standard errors, and correlations can all be obtained from the DAS.

There are hazards in reporting statistical tests for each comparison. First, comparisons based on large $t$ statistics may appear to merit special attention. This can be misleading since the magnitude of the $t$ statistic is related not only to the observed differences in means or percentages but also to the number of students in the specific categories used for comparison. Hence, a small difference compared across a large number of students would produce a large $t$ statistic.

A second hazard in reporting statistical tests for each comparison occurs when making multiple comparisons among categories of an independent variable. For example, when making paired comparisons among different levels of income, the probability of a Type I error for these comparisons taken as a group is larger than the probability for a single comparison. When more than one difference between groups of related characteristics or "families" are tested for statistical significance, one must apply a standard that assures a level of significance for all of those comparisons taken together.

Comparisons were made in this report only when $\mathrm{p} \leq .05 / k$ for a particular pairwise comparison, where that comparison was one of $k$ tests within a family. This guarantees both that the individual comparison would have $\mathrm{p} \leq .05$ and that for $k$ comparisons within a family of possible comparisons, the significance level for all the comparisons will sum to $\mathrm{p} \leq .05 .{ }^{45}$

For example, in a comparison of the percentages of males and females who enrolled in postsecondary education, only one comparison is possible (males versus females). In this family,

[^23]$k=1$, and the comparison can be evaluated without adjusting the significance level. When students are divided into five racial-ethnic groups and all possible comparisons are made, then $k=10$ and the significance level of each test must be $\mathrm{p} \leq .05 / 10$, or $\mathrm{p} \leq .005$. The formula for calculating family size $(k)$ is as follows:
\[

$$
\begin{equation*}
k=\frac{j(j-1)}{2} \tag{4}
\end{equation*}
$$

\]

where $j$ is the number of categories for the variable being tested. In the case of race-ethnicity, there are five racial-ethnic groups (American Indian/Alaskan Native; Asian/Pacific Islander; black, non-Hispanic; Hispanic; and white, non-Hispanic), so substituting 5 for $j$ in equation 2,

$$
k=\frac{5(5-1)}{2}=10
$$

## Assessing the Statistical Significance of the Relationship Between Two Continuous Variables

There are two approaches to testing the statistical significance of the relationship between two continuous variables used in this report. The first is based on serial $t$-tests with corrections for multiple comparisons, while the second is based on the correlation between the two uncategorized variables.

For example, to make general statements about the relationship between income and the amount of financial aid received by undergraduates, income can be coded into a set of mutually exclusive and exhaustive categories (e.g., incomes below $\$ 10,000, \$ 10,000-35,000$, over $\$ 35,000)$. Within each income category, the average amount of aid awarded can be calculated. Testing the overall relationship requires calculating $t$-tests among all relevant comparisons, along with a Bonferroni adjustment for the possibility of obtaining a significant difference due to the number of multiple comparisons being made.

There are some limitations in using categorical versions of continuous variables. First, the association or lack of association in a particular comparison may be affected by the choice of categories. Second, in cases with clear trends for a positive or negative association between variables, failing to find a significant $t$-value for just one among many possible comparisons prevents analysts from describing clear patterns in the data.

An alternative to categorizing continuous variables and conducting sequential $t$-tests is to calculate the statistical significance of the correlation between two uncategorized metric variables. For several comparisons discussed in this report, the statistical significance of the correla-
tion between two variables was calculated using a combination of features from the Data Analysis System's (DAS) correlation matrix option, and the ordinary least squares regression procedure in SPSS for Windows.

There are two steps to this process. In the first step, the DAS program produces a correlation matrix that can be read by SPSS for Windows. Included in the DAS output are the SPSS code for ordinary least squares regression, correlation coefficients, variable means and standard deviations, and the design effects (DEFT) for each variable. Although the DAS does not calculate the statistical significance of the correlation between the variables, such information can be obtained using SPSS.

In the second step, the SPSS program code provided by the DAS is used to calculate the regression between the variables. The SPSS regression output includes two important pieces of information. First, the program calculates the standardized regression coefficient or beta. For a two variable regression, the beta coefficient is equal to the correlation between the two variables. Second, the regression output includes an estimated $t$-value for the statistical significance of the beta (or correlation) coefficient.

The estimated $t$-value, however, does not take into account the complex sampling design used in the NPSAS data collection, and the $t$-values are likely to overestimate the statistical significance of the coefficient. The DAS output, however, provides the design effects for each variable based on the complex sampling used in NPSAS, and this information can be used to adjust the SPSS $t$-value by dividing it by the larger of the two design effects. ${ }^{46}$ This adjusted $t$-value properly indicates the statistical significance of the correlation between the two variables given the NPSAS sample design.

[^24]
[^0]:    ${ }^{1}$ The College Board, Trends in Student Aid 1987-1997 (Washington, D.C.: 1997). Total federal loans for all students were \$29 billion. The estimated undergraduate total of $\$ 19$ billion is based on data from the National Student Loan Data System.
    ${ }^{2}$ U.S. Department of Education, Office of Postsecondary Education, Federal Student Loan Programs Data Book FY 94-96 (Washington, D.C.: 1997).
    ${ }^{3}$ U.S. Department of Education, National Center for Education Statistics, Student Financing of Undergraduate Education, 199293 (Washington, D.C.: 1995), table 3.1a. These totals include a small percentage of non-federal loans.
    ${ }^{4}$ Figure 1 below.

    ${ }^{6}$ Compendium tables 3.2a, 3.3a, and 3.4a.
    ${ }^{7}$ Unless otherwise noted, PLUS loans to parents are categorized as "other aid" and excluded from the student loan amounts.

[^2]:    ${ }^{8}$ Full-time is usually defined as 12 or more credit hours of classes. A full academic year is usually $8-10$ months.
    ${ }^{9}$ Compendium table 5.1b.
    ${ }^{10}$ The lower tuition at public institutions reflects the large subsidies that they receive from state governments. The NPSAS:96 tuition averages reported here differ from those based on IPEDS that are reported in other NCES publications because the averages reported here are weighted by enrollment and include both in-jurisdiction and out-of-jurisdiction fees, if applicable.
    ${ }^{11}$ Compendium table 5.1b.

[^3]:    ${ }^{12}$ The U.S. Department of Education used the term "cost of attendance" for the student budgets required to determine financial aid need for the federal programs in 1995-96.
    ${ }^{13}$ About 14 percent of all undergraduates and 29 percent of full-time, full-year undergraduates lived on campus. See Compendium table 5.1c.
    ${ }^{14}$ Non-tuition expenses were adjusted to reflect attendance patterns and number of months enrolled.
    ${ }^{15}$ Compendium table 2.1c.
    ${ }^{16}$ Less than 1 percent of full-time, full-year students had a price of attendance under $\$ 4,000$ (compendium table 2.1c). Students must be attending at least half time to be eligible for federal student loans (normally this means enrolled in at least two courses). About 18 percent of all undergraduates were enrolled less than half time during the entire academic year.

[^4]:    ${ }^{17}$ Compendium table 5.1a.

[^5]:    ${ }^{18}$ The average amount of the loans was positively correlated with income for dependents, but not for independent students.

[^6]:    ${ }^{19}$ There was a strong positive correlation between federal loan amounts and the price of attendance, a weak positive correlation with dependent incomes, and no correlation with independent student incomes.
    ${ }^{20}$ Compendium table 1.4 a . Only 4 percent of student borrowers had non-federal loans, and most of these students also had federal loans.

[^7]:    NOTE: Based on Compendium tables 1.4a, 1.4b, 1.5a, and 1.5 b . Percentages do not sum to totals due to rounding. Parent PLUS loans are included only if the student also borrowed. Any of the categories may also include non-federal loans.

[^8]:    ${ }^{21}$ Need for federal financial aid is determined by subtracting the expected family contribution from the student budget.

    ${ }^{2}$ "Loans" only include loans to students. Parent PLUS loans are categorized as "other aid."
    NOTE: Percentages may not sum to 100 due to rounding.
    SOURCE: U.S. Department of Education, National Center for Education Statistics, 1995-96 National Postsecondary Student Aid Study (NPSAS:96), Undergraduate Data Analysis System.

[^21]:    ${ }^{41}$ For more information on the NPSAS survey, consult U.S. Department of Education, National Center for Education Statistics, Methodology Report for the 1995-96 National Postsecondary Student Aid Study (NCES 98-073) (Washington, D.C.: 1997).

[^22]:    ${ }^{42}$ The NPSAS:96 samples are not simple random samples, and therefore, simple random sample techniques for estimating sampling error cannot be applied to these data. The DAS takes into account the complexity of the sampling procedures and calculates standard errors appropriate for such samples. The method for computing sampling errors used by the DAS involves approximating the estimator by the linear terms of a Taylor series expansion. The procedure is typically referred to as the Taylor series method.

    ${ }^{45}$ The standard that $\mathrm{p} \leq .05 / k$ for each comparison is more stringent than the criterion that the significance level of the comparisons should sum to $\mathrm{p} \leq .05$. For tables showing the $t$ statistic required to ensure that $\mathrm{p} \leq .05 / k$ for a particular family size and degrees of freedom, see Olive Jean Dunn, "Multiple Comparisons Among Means," Journal of the American Statistical Association 56 (1961): 52-64.

[^24]:    ${ }^{46}$ This procedure was followed only if the DEFT was greater than 1.0.
