1 Introduction

- 52 This specification describes the use of Kerberos tokens with respect to the WS-Security
- 53 specification.

51

Note that Section 1 is non-normative.

2 Notations and Terminology

56 This section specifies the notations, namespaces, and terminology used in this specification.

2.1 Notational Conventions

- The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD",
- 59 "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be
- 60 interpreted as described in RFC2119.
- Namespace URIs (of the general form "some-URI") represent some application-dependent or
- 62 context-dependent URI as defined in RFC2396.
- This specification is designed to work with the general SOAP message structure and message
- 64 processing model, and should be applicable to any version of SOAP. The current SOAP 1.2
- 65 namespace URI is used herein to provide detailed examples, but there is no intention to limit the
- applicability of this specification to a single version of SOAP.
- 67 Readers are presumed to be familiar with the terms in the Internet Security Glossary.

2.2 Namespaces

The XML namespace URIs that MUST be used by implementations of this specification are as follows (note that different elements in this specification are from different namespaces):

```
http://schemas.xmlsoap.org/ws/2002/xx/secext
http://schemas.xmlsoap.org/ws/2002/xx/utility
```

The following namespaces are used in this document:

73 74

75

68

69

70

71

72

55

57

Prefix	Namespace
S	http://www.w3.org/2001/12/soap-envelope
ds	http://www.w3.org/2000/09/xmldsig#
xenc	http://www.w3.org/2001/04/xmlenc#
wsse	http://schemas.xmlsoap.org/ws/2002/xx/secext
wsu	http://schemas.xmlsoap.org/ws/2002/xx/utility

2.3 Terminology

- 76 This specification employs the terminology defined in the WS-Security Core Specification.
- 77 Defined below are the basic definitions for additional terminology used in this specification.

78 [TBS]

3 Usage

79

86

89

- 80 This section describes the profile (specific mechanisms and procedures) for the
- 81 Kerberos binding of WS-Security.
- 82 **Identification:** urn: oasis: names: tc: WSS: 1.0: bindings: WSS-Kerberos-binding
- 83 Contact information: TBD
- 84 **Description:** Given below.
- 85 **Updates:** None.

3.1 Processing Model

- 87 The processing model for WS-Security with Kerberos tokens is no different from that
- 88 of WS-Security with other token formats as described in WS-Security.

3.2 Attaching Security Tokens

- 90 Kerberos are attached to SOAP messages using WS-Security by TBS.
- 91 The following value spaces are defined for @ValueType:

QName	Description
wsse:X509v3	X.509 v3 certificate
wsse:Kerberosv5TGT	Kerberos v5 ticket as defined in Section 5.3.1 of Kerberos. This ValueType is used when the ticket is a ticket granting ticket (TGT)
wsse:Kerberosv5ST	Kerberos v5 ticket as defined in Section 5.3.1 of Kerberos. This ValueType is used when the ticket is a service ticket (ST

92 93

94

The following example illustrates a SOAP message with a Kerberos token.

```
95
           <S:Envelope xmlns:S="...">
96
               <S:Header>
97
                   <wsse:Security xmlns:wsse="...">
98
99
100
101
102
                   </wsse:Security>
103
               </S:Header>
104
               <S:Body>
105
106
               </S:Body>
```

107 </S:Envelope> 108 3.3 Identifying and Referencing Security Tokens 109 110 **TBS** 111 3.4 Proof-of-Possession 112 113 When a Kerberos ticket is referenced as a signature key, the signature algorithm SHOULD be a 114 hashed message authentication code. In particular, it is RECOMMENDED to use HMAC-SHA1 115 (required by XML Signature), with the session key in the ticket used as the shared secret key. 3.5 Error Codes 116 117 When using Kerberos tokens, it is RECOMMENDED to use the error codes defined in the WS-Security specification. However, implementations MAY use custom errors, 118 119 defined in private namespaces if they desire. Care should be taken not to introduce 120 security vulnerabilities in the errors returned. 3.6 Threat Model and Countermeasures 121 122 The use of Kerberos assertion tokens with WS-Security introduces no new threats 123 beyond those identified for Kerberos or WS-Security with other types of security tokens. 124 125 Message alteration and eavesdropping can be addressed by using the integrity and 126 confidentiality mechanisms described in WS-Security. Replay attacks can be addressed by using message timestamps and caching, as well as other application-127 128 specific tracking mechanisms. For Kerberos tokens ownership is verified by use of keys, man-in-the-middle attacks are generally mitigated. 129 130 It is strongly RECOMMENDED that all relevant and immutable message data be 131 signed. It should be noted that transport-level security MAY be used to protect the message 132 133 and the security token.

4 Acknowledgements

- 135 This specification was developed as a result of joint work of many individuals from the WSS TC
- 136 including: TBD

- The input specifications for this document were developed as a result of joint work with many
- individuals and teams, including: Keith Ballinger, Microsoft, Bob Blakley, IBM, Allen Brown,
- 139 Microsoft, Joel Farrell, IBM, Mark Hayes, VeriSign, Kelvin Lawrence, IBM, Scott Konersmann,
- 140 Microsoft, David Melgar, IBM, Dan Simon, Microsoft, Wayne Vicknair, IBM.
